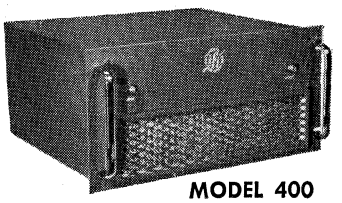
WIDE BAND AMPLIFIERS



MODEL 400

HIGH POWER DISTRIBUTED AMPLIFIER

The Model 400 is a broad band amplifier capable of 100 watts CW output which can be used for both CW and very short pulse amplification. The fast rise time and high power output make the Model 400 ideal for short pulse applications. In the laboratory it is utilized in testing wide tuning range transmitters and antennae and as a final stage for tunable RF signal sources.

The Model 400 can be used for the amplification of video pulses, either as a Class A amplifier in which the maximum output pulse power is limited to 100 watts or it may be used for higher level pulses up to approximately 5 kilowatts peak power (with special power supply).

The Model 400 is normally furnished with a power supply having the following characteristics:

Plate: 500 volts at 2.5A
Screen: 400 volts at 500 MA
Filaments: 6.0 volts at 15.6A
Bias: 30 volts at 100 MA

Price $4900

SERIES M500 AMPLIFIER

In combination, IFI amplifiers deliver a gain as high as 46 DB. With bandpass 200KC-220MC wide, you get power output of 3 watts. Pulses with rise time as short as 3 millimicroseconds can be measured. A Model 530, for instance, driving a Model 510, in turn connected to a Model 500 and fed with a signal of 120 millivolts (peak), will furnish an amplitude of 25 volts peak. Input pulse may be positive or negative with rise time of 2 or 3 millimicroseconds.

MODEL 395A

SUPER VIDEO AMPLIFIER

The Model 395A features high gain over a very wide bandwidth. This amplifier is unique in its specification and applications. It consists of two identical Model 600 Amplifiers and a common power supply. Each section has a 90 ohm input and a 90 ohm output impedance with separate connectors on the front panel.

The Model 395A may be used as two separate amplifiers each with a gain of 40 db and 2.0 VRMS output. The twin amplifier sections can also be used in three other ways — cascade, parallel or push-pull. When used in cascade, the gain is 80 db. Parallel connection results in gain of 40 db and a power output of .08 watts, the input and output impedance being 50 ohms. A push-pull arrangement makes it possible to deflect most laboratory scopes a full inch (30 V. peak to peak approx.) if output is fed directly into the plates. **Price $495**

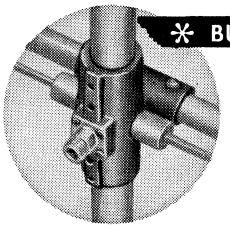
Precision Industrial Antennas by SCALA

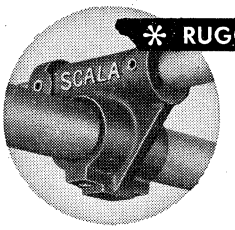
Why you get better performance with Scala Antennas–



✻ BUILT-IN BALUN

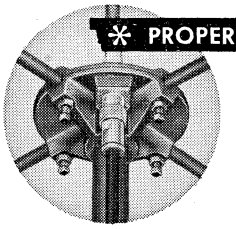
(pat. pending)

Provides a balanced feed system assuring equal distribution of current to the driven element, greater electrical and mechanical stability. The balun allows the driven element to be supported by metal and eliminates the necessity of using the insulator as a mechanical support.



✻ RUGGED CONSTRUCTION

Elements are supported by machined castings providing a larger support area, damping vibrations and reducing the concentration of stress and metal fatigue. Mechanical splices are never used. All units are available in metals other than aluminum if desired.



✻ PROPER STRUCTURAL DESIGN

A machined casting, webbed for extra strength and structural support is used to hold parasitic elements in the ground plane antenna. Set screws and lock nuts provide simple assembly and easy installation.

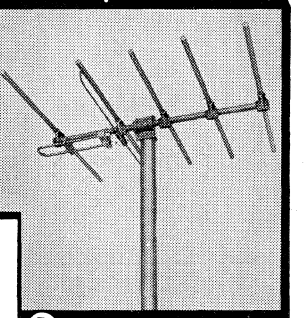
✻ BUILT-IN HEATER

Most of the antennas described below can be obtained with a 24 volt heating system for maximum weather protection and assured winter operation.

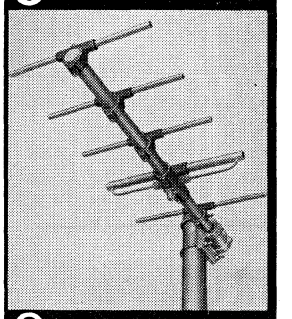
✻ TESTING AND INSPECTION

Each antenna is tested twice for impedance match—once during manufacture and again prior to dis-assembling for shipment. New models are field-tested for one year before released for production.

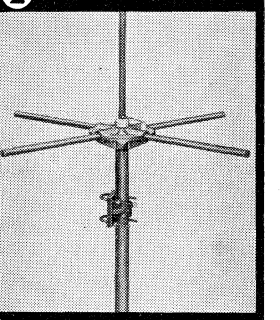
**Shipped complete—all U-bolt mounting clamps and brackets are included. Unit is ready for installation.*



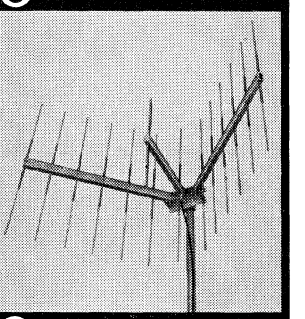
1 MODEL CA5-150



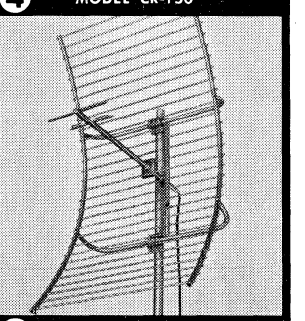
2 MODEL CA5-450



3 MODEL GPC-150



4 MODEL CR-150



5 MODEL PR-450

1 YAGI—VHF

The Scala Model CA5-150 is a 52-ohm 5 element yagi. Nine db gain on the major lobe is assured by careful design and Scala's exclusive feed system which eliminates radiation from the feed line and provides equal distribution of current to the driven element. The VSWR is less than 1.3 to 1. For complete weatherproofing and year-around operation, the boom can be provided with a 24 v heater. The unit is annodized and dichromate sealed.

2 YAGI—UHF

The Scala Model CA5-450 general communications antenna is a product of years of extensive research. Its construction is possible only because of developments in foam plastics and Teflon insulated cable. A Teflon insulated balun is located within a chamber filled with a special foam plastic for complete moisture and corrosion protection. High strength 7/16" solid aluminum rod is used for the parasitic elements. VSWR is less than 1.3 to 1. Gain is 10 db. Two units may be mounted in an array for an increase in gain up to 3 db and greater directivity. Shipped completely assembled, the unit is annodized and dichromate sealed.

3 GROUND-PLANE—40-170 MC

The Scala Model GPC-150 ground-plane antenna is ideal for non-directional, all weather communications. It is the first ground-plane antenna that can be obtained with 24 v heaters throughout — including the radial elements, providing a completely weatherproof and safe year-round operating antenna. Another version of this unit, comes equipped with a reflector and provides a cardioid radiation pattern with increased gain. In all cases the VSWR is less than 1.3 to 1. The unit is annodized and dichromate sealed.

4 CORNER REFLECTOR—140-170 MC

The Scala Model CR-150 corner reflector uses Scala's unique built-in balun to convert the unbalanced coaxial feed to the balanced load of the radiating dipole. This provides an excellent match and assures proper distribution of energy to the feed point. Featuring extreme ruggedness and ease of installation, the unit can be assembled in less than two minutes.

5 PARAFLECTOR®—350-1000 MC

The Scala Model PR-450 Paraflector® is a major contribution toward the improvement of antenna construction and performance in the 350 to 1000 mc range. Essentially, a parabolic section in one plane, the driver is positioned to approach a point source. Over the 350 to 1000 mc range, the Paraflector® is equal to a parabolic dish of the same aperture and has the advantage of lower cost, lighter weight, ease of assembly, installation and rugged construction.

EXACTING DESIGN—TESTED MATERIALS—PRECISION MANUFACTURE

In addition to the antennas described above, and other standard communications, telemetering and community systems, Scala maintains a complete engineering service to design and manufacture special antennas to your specific requirements.

for maximum performance

AMPEX MAGNETIC TAPE

...from the leader in magnetic tape instrumentation

DIRECT RECORDING
FM-CARRIER
PULSE DURATION MODULATION
NRZ-DIGITAL

Whatever recording modes you use, a better tape, by itself, can significantly improve your equipment's performance. By selecting the correct Ampex precision tape from the types offered below, you assure the highest level of performance that the state of the art permits.

Coercivity and retentivity are carefully balanced on all Ampex tapes to give a squareness to the hysteresis loop. This optimized relationship in the B-H curve promises you what the tape delivers—uniformly higher output over the entire frequency spectrum.

Interchangeability

Output on each reel is uniform within ±0.20 db for low frequencies and ±0.80 for the highs. Carefully selected oxides and film backings, combined with efficient binders and solvents, give reel-to-reel uniformity as well, with consistent coating thicknesses, density, and the best possible dispersion. What this means to you is that since all Ampex precision tapes exhibit the same basic magnetic propertics, all may be used interchangeably without equalization or bias adjustments.

Ferro-Sheen smoothness

Adding durability and environmental resistance, the exclusive Ferro-Sheen process also makes Ampex the smoothest of all magnetic tapes. Surface smoothness is important because it allows closer tape-to-head contact starting with the very first run, which means less spurious noise and *consistently* high output in subsequent usage—unlike other tapes which may change characteristics, getting "hotter" only as the oxide coating wears smoother with use.

Functional packaging

Even the distinctively-styled but sensible Ampex packaging bespeaks the quality and care which go into each reel of Instrumentation Tape. Two plastic film bags preserve the dust-free environment of the plant where the tape is made and packed. Plastic foam wedges and a center hub-support protect the contents from damage inside tough, corrugated inner and outer sleeves. There are convenient write-in panels for titling. A full description of the tape itself, including catalog and batch numbers, appears on the package spine so tapes can be easily identified right on the shelf without removing the package.

Precision reels

Ampex Precision Reels are engineered from stress-relieved magnesium alloy to close minimal clearances between tape and flange. Small, staggered flange openings prevent propellor effects from whipping air into the tape pack, and rigidly-constructed concentric hubs withstand distortion under tape pressure, a weakness of ordinary reels in high-speed transports. These precision reels provide two *plus* benefits: more protection for your valuable recorded data, and increased accuracy.

More protection comes from greater flange rigidity and a better pack, which prevents loose tape edges from protruding to curl and fray—as when ordinary reel flanges are bent in handling. Accuracy also improves because better packing means consistent tension on the tape and therefore less likelihood of flutter.

Nationwide service

Ampex Instrumentation Tape is regularly available on hubs or NAB-type reels. Type designations, base thicknesses and materials, tape widths, reel diameters, standard lengths and carton packaging are shown in the tables below. An Ampex tape specialist will be glad to help you make the correct selection for your needs.

Competent help and assistance in solving your data recording problems is part of the obligation of leadership which Ampex is pleased to accept. Ampex tape specialists offer a network of technical service and consultation facilities throughout the U. S. and Canada, based on the greatest total experience in magnetic tape instrumentation.

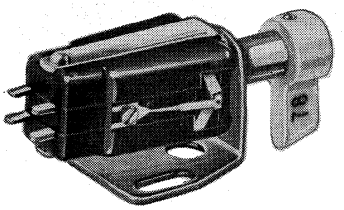
STEREO PERFECTIONIST

COMPATIBLE TURNOVER STEREO CARTRIDGE

PERFECTED PERFORMANCE at the LOWEST PRICES in the INDUSTRY!



PERFECTIONIST • Model STC - 1

With its 4-pin connections, the PERFECTIONIST not only virtually eliminates hum, but in addition removes shock hazards when used with AC/DC amplifiers.

The PERFECTIONIST is a STEREO cartridge of the turnover type, developed and perfected through many years of intensive research and expert knowledge in the field of acoustics. This superior cartridge of the latest modern design, faithfully reproduces STEREO, LP, and 78 RPM discs. Every effort has been made, including extensive laboratory tests, to assure you of a product of optimum performance. As a result of our exclusive process utilizing the newest ANTI-HYDROSCOPIC materials available, the PERFECTIONIST will outperform other types of stereo cartridges, even when high humidity and extreme temperature changes are normally a problem. Representative samples of the STC-1 have been exposed to atmospheric tests of 40 degrees Centigrade at 90% humidity, for a constant period of 500 hours. After such severe exposure, the dielectric strength did not vary ½ of 1% of the original measurements.

The recommended STYLUS PRESSURE of the PERFECTIONIST is 5 to 7 grams, which can be further reduced as low as 4 grams when used with a professional tone arm. This LOW STYLUS PRESSURE is indicative of the HIGH COMPLIANCE of the PERFECTIONIST, since high compliance is directly related to stylus pressure. It is obvious therefore, that the excellent compliance of the STC-1 exceeds that of other stereo cartridges selling for considerably more. In addition, the HIGH COMPLIANCE of the PERFECTIONIST increases the life of STEREO records and reduces the latent possibility of expensive record damage.

DYNAMIC HEADSET-MICROPHONES

Model RH-78 (above) incorporates the latest type dynamic receiver elements and noise cancelling dynamic microphone. Produced to current military specifications, and can be obtained with a transistor amplifier for use in systems originally designed for carbon microphones.

SPECIAL AND GENERAL PURPOSE HANDSETS

Available for various applications. Roanwell handsets can be equipped with various receiver, transmitter or cordage combinations to fit your specific requirement. Roanwell also designs and manufactures the "Confidencer," NOISE CANCELLING telephone transmitter element. "Confidencers" are available from Bell and independent telephone companies for subscribers' use — and directly from Roanwell for special applications.

TELEPHONE OPERATORS' HEADSETS

Available in several versions: Models R-52AW, BW, CW, DW, EW and FRW. In addition to the R-52 headset variations, Roanwell manufactures ruggedized operators' handset-headsets presently used in military communications. METEX ELECTRONIC WEATHERSTRIP

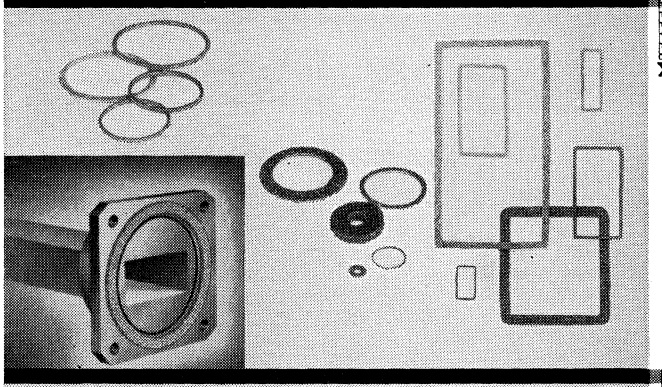
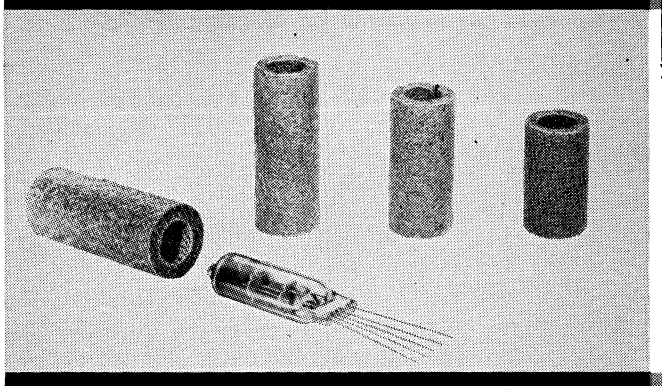
Electronic weatherstrip combines conductivity, resiliency and compressibility with ease of installation to assure an RF tight black box, cabinet or can. Interlocked loops of continuous wire strands guarantee maximum cohesion. When knitted over a rubber or a silicone core, Metex provides an additional seal against weather or pressure. Available in more than 1000 shapes and sizes to meet all design requirements.



METEX RF GASKETS

The controlled resiliency and compressibility of Metex RF gaskets insure continuous line contact between imperfect mating surfaces resulting in maximum conductivity. Standard waveguide choke flange and AN connector gaskets are carried as stock items. Metex combination gaskets of rubber or silicone for pressure seal and Metex for RF seal have been designed up to 12 feet in diameter.



METEX HEAT DISSIPATING TUBE SHIELDS

Metex heat dissipating tube shields are extensively used as cooling sleeves in miniature and sub-miniature tube assemblies. The flexibility of mesh provides greater contact area over the irregular surface of a tube. The inherent resiliency of Metex also acts to isolate the tube from vibration and shock.

METEX MAGNETIC SHIELDING

Metex magnetic shields are designed and manufactured by Metal Textile Corporation to give guaranteed performance while using the lowest priced materials available. Our engineers stand ready to submit original designs for your most complex shielding problem.

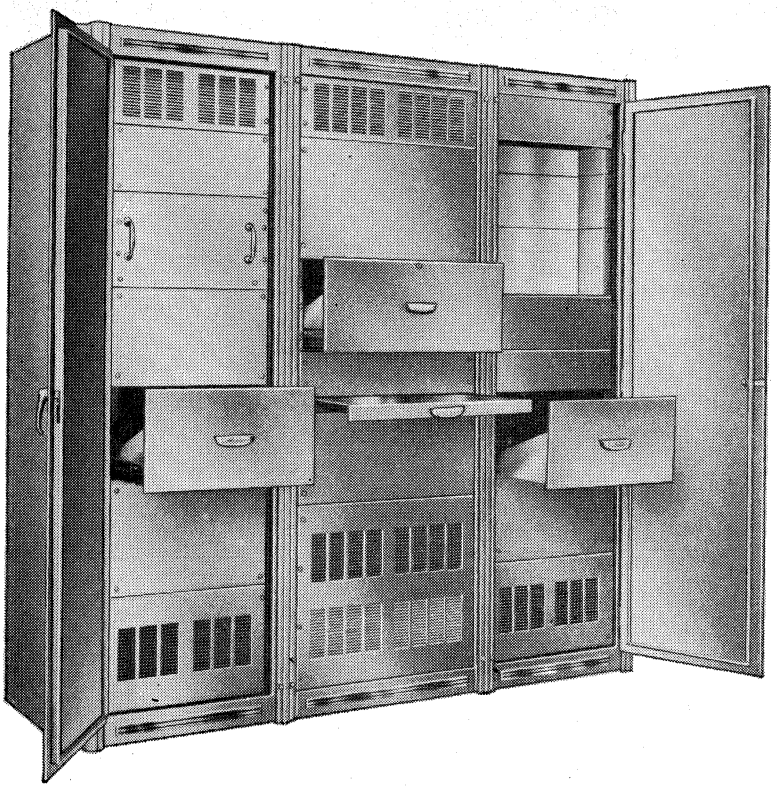
PAR-METAL UNIVERSAL CABINET RACKS



For over two decades we have made various types of enclosed relay racks, differing in styling, specifications, and size. In presenting our new series of *UNIVERSAL CABINET RACKS* we now offer *SIXTY* different sizes of cabinet racks utilizing two basic types of construction. Both types combine the utmost in *FLEXIBILITY* of exterior and interior arrangement, *RUGGED DESIGN*, that is above all functional and based on the latest in metal construction techniques, and *OVERALL ECONOMY* as compared with costly custom made enclosures.

Their design allows ease in the arrangement and rearrangement of a complete line of interior fittings (stationary and sliding shelves, chassis brackets and supports, equipment drawers, etc.) which we can supply, as well as ease in the installation of equipment by your engineers. The net result is the adaptability of the rack to the changing requirements of your electronic equipment.

See our catalog pages in this year's edition of
The *Radio-Electronic* MASTER

The advantages of UNIVERSAL CABINET RACKS may be summarized as follows:

DIMENSIONS: Racks are available for 19″, 24″, or 30″ wide panels. Cabinet heights are 48⅛″, 67⅜″, 77⅛″ and 83⅛″; depths available are 18″ or 24″.

DESIGN: All sizes listed may be obtained with conventional solid side walls, or with open side walls and detachable side panels. Side shields for use between racks listed.

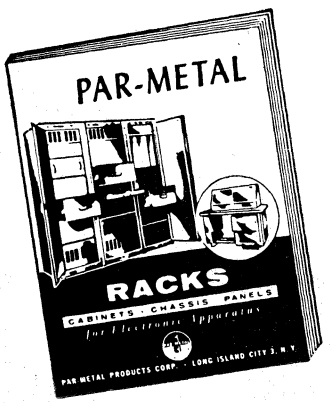
DOORS: All sizes listed may be ordered with rear doors only; or with matching front and rear doors.

GROUPING: All racks of the same height may be set up in "gangs" or rows; racks with 19″, 24″ or 30″ wide panels may be intermixed; racks with or without front doors may also be intermixed.

SLIDING SHELVES AND DRAWERS: Several models are shown in the rack assembly shown above. There are basic slides, phono and storage drawer slide assemblies, and desk shelf assemblies. They are all mounted on the front of racks in the same way as regular panels.

MID-RAIL MOUNTING OF PANELS: The panel mounting angles or "strips" are fully adjustable on all racks, and may be positioned at any location from front to back. Additional panel mounting angles may be easily inserted where needed for mounting terminal boards, etc.

VERTICAL SIDE SUPPORTS: These supports provide a new method for supporting chassis and other equipment in the racks. Installing brackets or shelves is now a simple procedure; the means of attaching such brackets is fully adjustable so that chassis may be accurately lined up with the front panels. No drilling or other fabrication is required. The chassis may then be installed or removed with a minimum of effort. The vertical slide supports also facilitate the installation of special sliding devices obtainable from slide manufacturers.



FINISHES: All racks may be obtained in any of the following finishes: **GREY RIPPLE ENAMEL, BLACK RIPPLE ENAMEL, GREY HAMMERTONE ENAMEL, GREY METALLIC ENAMEL, and PRIMER COAT ONLY.** It is essential that the finish required be specified on your order to avoid subsequent inquiry and delay.

HOW TO BEAT THE HIGH COST OF PRINTING CATALOGS...

a low cost catalog preparation and printing service for manufacturers. From design to printed piece all under one roof.

Effective product presentation to customers and prospects requires a well-organized catalog, complete in content and always current. In today's market of high printing and preparation costs, United Catalog Publishers, Inc., offers you a five point plan for a sales-producing catalog at low cost.

1 LOW COST PRINTING – United is the largest supplier of catalogs for the radio-TV-electronic industry. Tremendous volume spells saving for you on both long and short runs.

2 FREE TYPESETTING – Manufacturers who catalog in *eem* or The Radio-Electronic MASTER are entitled to an initial FREE typographical set-up, provided that the same pages are used in either of these master catalogs.

3 CATALOGS ALWAYS CURRENT – United will supply you with quantities of up-to-date catalogs as you need them. You are not penalized for short runs. Additional information may be added and revisions made each time you reprint, so that your catalog is always current. You receive the benefits of large quantity printing prices and each subsequent reprinting brings your catalog up-to-date inexpensively.

4 EXPERIENCE IN THE ELECTRONIC FIELD – For the past 24 years, United Catalog Publishers, Inc., has supplied hundreds of leading electronic manufacturers with catalogs. United is familiar with industry problems and can guide you in preparing sales-producing catalogs for trade shows, etc.

5 NO LAST MINUTE RUSH – Manufacturers cataloging in United's *eem* or The Radio-Electronic MASTER can eliminate the last minute rush to produce a catalog. Catalog pages in either of these two volumes can be brought up-to-date quickly because printing forms and plates are always available.

BALCO REGULAR AND HI - TEMP CAPACITORS

Balco's capacitor division offers a variety of quality capacitor types for conventional and HI-TEMPERATURE application, manufactured under the most rigid standards of the industry.

Balco's Hi-Temp capacitors are noted for their exceptional performance at high temperatures, for example, most of the important characteristics at 200°C and 250°C exceed the performance of conventional capacitors at room temperature.

Balco capacitors are the results of our pioneering and leadership in the research and development of HI-TEMPERATURE capacitors since 1946. A large part of this work has been supported by a nearly continuous series of R & D capacitor contracts with the Military.

Note: This catalog reflects a number of size reductions and some size changes versus those capacitors carrying the same series designations in previous catalogs. To insure exact size desired specify the particular catalog number used. The above sizes are for this catalog No. 59-1 only. Other values, voltages, tolerances and mechanical configurations can be made for your special application requirements.

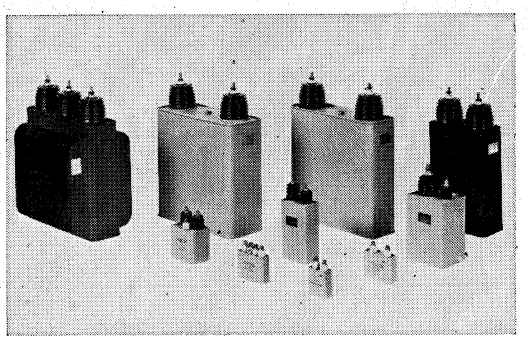
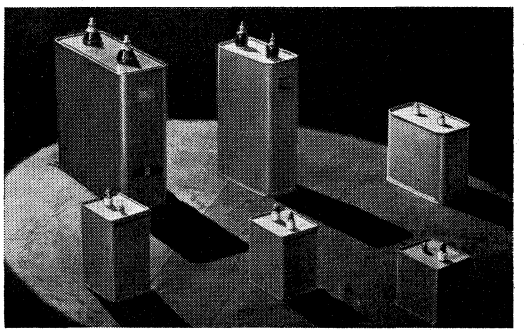
GENERAL ELECTRIC CAPACITORS



Pulse-forming Network Capacitors

Capacitor networks of one or more sections and a like number of inductance coils provide discharge pulses of a specified energy content and duration. They convert an a-c or d-c charging source into the approximately rectangular wave output required in generating the high-frequency power pulse for commercial and military radar equipment. Operating voltages for the network range from 500 to 132,000 volts at temperatures from —55 to +125 C.

Write for Bulletin GEA-4996

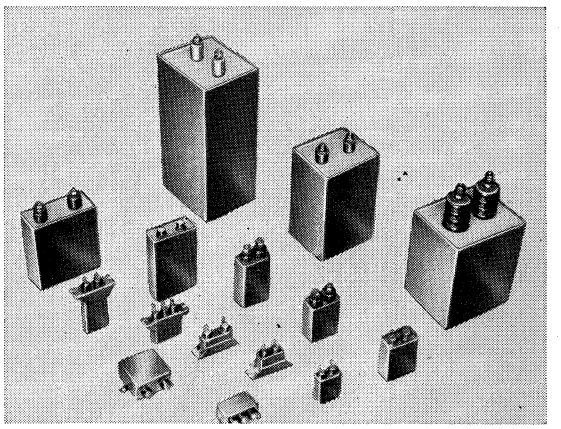


Energy-storage and Discharge Capacitors

General Electric energy-storage capacitors are made in a wide range of ratings for phototube and similar light-duty applications. Nonoscillatory voltage ratings up to 5000 volts provide up to 800 watt-seconds. These units will meet NEMA Class 2 standards at ambients up to 40 C, and have standard capacitance tolerance of ±10 per cent.

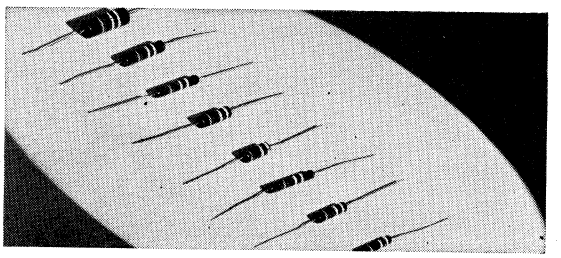
For heavy-duty service, single units and large banks are custom designed and engineered for each application. Voltage ratings up to 100 kv d-c provide up to 1500 watt-seconds with series resonant inductance values as low as 0.01 microhenries.

Write for Bulletins GEC-1357 & GEC-1521.



Mil-C-25A Capacitors

These capacitors are for filter, blocking and by-pass applications where the a-c component of the impressed voltage is small with respect to the d-c rating. General Electric is a qualified supplier of the following case styles: CP53, CP54, CP55, CP61, CP63, CP65, CP67, CP69, and CP70, meeting or exceeding MIL-C-25A requirements for characteristics D, E, F, K, L, M, and V. Voltages range from 100 to 12,500 volts d-c with capacitance values from 0.01 to 15 microfarads. Brackets are available for those units which the mounting bracket is not an integral part.

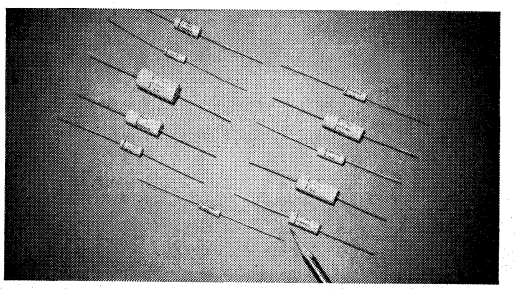


PVZ* Molded Tubular Capacitors

General Electric molded PVZ capacitors are fixed, paper-dielectric units having application in computers, missiles, telephone equipment and other high-grade military, commercial, and electronic equipment. Ratings: 100 to 400 volts d-c. They can be supplied from 0.00047 to 0.022 microfarads in the 400-volt range and from 0.00047 to 0.15 microfarads in the 100-volt range. Tolerances: ±5, ±10, ±20 per cent. Temperature range is from —55 to +125 C.

Write for Bulletin GEC-1452

**Registered trade-mark of General Electric Co.*



Lectrofilm†-B Tubular Capacitors

These nonmetallic cased tubular capacitors with Mylar‡ film dielectric offer extremely high reliability at temperatures up to 125 C for minimum cost. GENERAL ELECTRIC CAPACITORS

Tantalum Electrolytic Capacitors

General Electric Tantalytic* capacitors fill direct-current, low-voltage applications where superior performance and small size are essential. Foil types are available in cylindrical and rectangular cases for temperatures from —55 to +125 C. Voltage ratings up to 150 volts d-c and microfarad values from 0.25 to 580 are available. Plain and etched foils are available with polar or nonpolar construction. The KSR* Tantalytic unit provides up to 3500 microfarads in a single case. For low-voltage polar use, General Electric offers the solid electrolyte Tantalytic capacitor, a miniature unit with stable operation from —80 to +85 C. Micro-miniature capacitors for hearing aid and other transistor applications are also available.

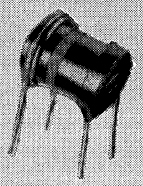
VARIABLE TRIMMER PISTON CAPACITORS

for subminiaturazation of printed and conventional circuitry



Are obsolescent oversized capacitors cramping your style? Let JFD Precision Trimmers help you save time and space . . . upgrade performance reliability in critical network design.

Miniature and subminiature JFD Piston Capacitors give you maximum tuning range in absolute minimum physical size . . . precise tuning resolution and stability . . . ultra low loss operation . . . rugged shock, vibration and corrosion resistance . . . approximately zero temperature coefficient. These are some of the reasons why they are specified in almost all of today's critical systems.

If you're looking for new design freedom, new performance highs under severe environmental conditions, why not investigate the many advantages of JFD Trimmers? If your requirements can't be met from our current models, we'll be glad to produce according to your specifications. Write for the new JFD Piston Capacitor File Folder for detailed electrical and mechanical data.

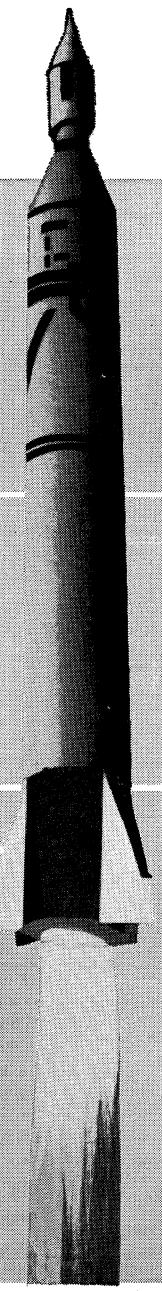
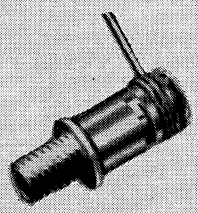
ELECTRONIC COMPONENTS
for Space-Challenging Demands!

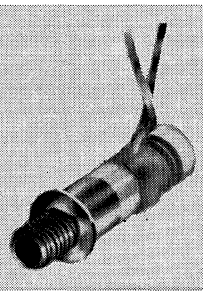


SEALCAPS



New JFD air-tight, water-tight Miniature Quartz Sealcaps seal out moisture, seal in reliability and accuracy, regardless of atmosphere. Combine characteristics of new Sealcap construction and miniature quartz capacitor design. Eliminates corona and voltage breakdown at high altitude. Sealcap design prevents formation of moisture inside unit. Quartz design provides high Q, ultra-low loss high frequency operation, greater stability and approximately zero temperature coefficient. Available unpotted or encapsulated for higher dielectric strength. For complete data write for Bulletin No. 215A. Also available in glass dielectric (bulletin 207B)

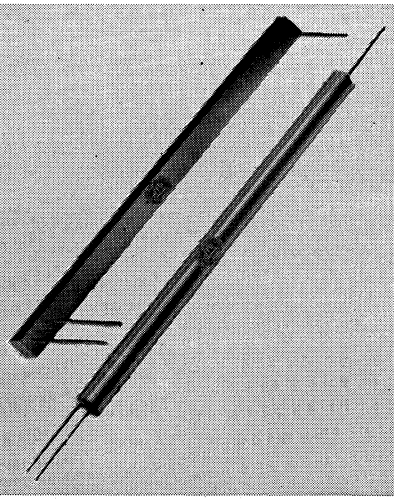
LC TUNERS



Combine variable inductor and capacitor in one compact unit. Affords more circuit in less space, better reliability, greater economy, faster assembly, smaller size and weight. Use of glass or quartz dielectric assures a low temperature coefficient. Flexibility in design to suit circuit requirements. The number of turns, types of windings, size and type of capacitor plates, Q and other parameters can be designed to suit individual circuit requirements.

Write for Bulletin No. 216 listing standard and panel circuit mounting types now available.

DELAY LINES



Designed for applications calling for short delay intervals, the new lines offer a high ratio of delay to pulse rise time, in minimum space. Available for printed circuit assembly or for conventional mounting, JFD distributed constant Delay Lines meet all military requirements. They can also be modified or custom-designed to meet your most rigid specifications. JFD lumped constant Delay Lines can also be designed to suit your requirements.

Characteristics: Precise pulse fidelity; operating temperature range of —55° C to +125° C; excellent temperature stability; rugged encapsulated construction resists environmental moisture, humidity, shock and vibration; linear phase shift; 0.1 inch grid spacing for printed board types; attenuation of approximately 1 db per μ sec.

Write for Bulletin 213A providing complete electrical and mechanical data. Also—lumped constant Delay Lines to your specifications.

These are a few examples of JFD creative engineering to solve today's problems and tomorrow's applications. For information or engineering assistance on specific tuning or pulse circuitry needs, call or write today.

RH7G

RELAYS USING VACUUM SWITCHES
Type R and RH Vacuum Switches are available from Jennings mounted as relays for indoor use. They may be mounted with contacts normally open or normally closed or two switches may be mounted in a single pole double throw arrangement. Either ac or dc solenoids may be used. Insulation between the switch and its actuating solenoid is provided by a 2 to 12 inch puller rod providing 40 to 140 kv insulation. CE grade phenolic laminate is recommended for dc or 60 cycle use. Grade G7 silicone glass laminate is recommended for radio frequency applications.

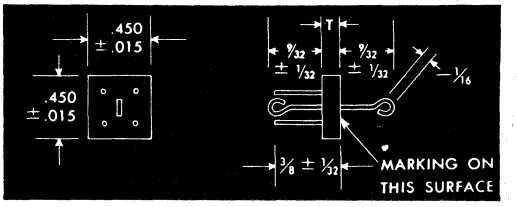
COAXIAL SERIES



MONOLITHIC — REQUIRES NO HERMETIC SEAL

Only two materials go into "VITRAMON" Capacitors . . . porcelain enamel for the dielectric and encasing insulation . . . fine silver for the electrodes. Perfectly bonded, the two become, effectively, one homogenous unit . . .

Stable over a Wide Temperature Range.

The solid block of "quality porcelain" in which the silver electrodes are immersed makes "VITRAMON" Capacitors both

Rugged and Vaporproof

Pure materials plus perfect bonding combine to eliminate both *Loss and Noise.*

Finally . . . their unique construction allows for "layering" the electrodes so that much greater active dielectric area can be squeezed into the same cubic content . . . They're *Miniature.*

The most famous names in electronics use "VITRAMON" Capacitors in guided missiles, jet ignition, proximity fuses, and in radar, servo, guidance, fire control, telemetering and carrier telephone systems.

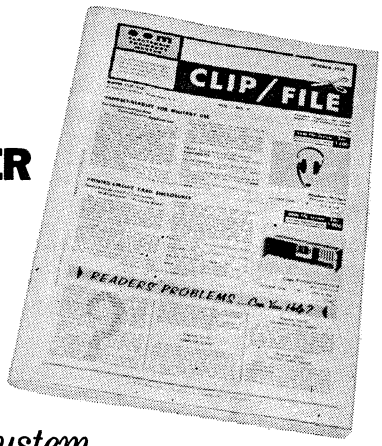
WORKING TOGETHER TO GIVE YOU COMPLETE PRODUCT INFORMATION



... and a self-indexing filing system

Here's How It Works . . .

It all starts with the annual *eem*-Electronic Engineers Master. *eem* categorizes the electronic industry into 51 major product groups. Numerically they run from Section 1100 through 6000 and appear at the top of each *eem* catalog page. These same section numbers are used as the index for your personal filing system.

Monthly, you'll receive *CLIP/FILE,* the new product newspaper. Each *CLIP/FILE* new product item includes an *eem* file system number. You simply clip each release along the perforated line, and file it in its appropriate folder.

Each time you refer to *eem* and wish to check for additional information, merely look for the section number at the top of the *eem* page and select the corresponding file folder. There, at your fingertips, is the necessary data to bring you up-to-the-minute.

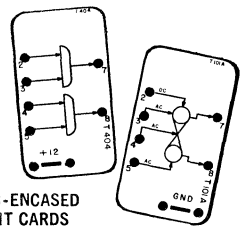
Standard Hardware: Low-cost, 9-pin noval socket fits most models. (Special keyed socket furnished with 13-pin logics.)
Sealing: Sealed container, but can be taken apart by hand for repairs.
Operating Speed: 0-250 kc, or faster.
Price Range: Averages $33.00 to $26.00, depending on quantity.

REPRESENTATIVE CIRCUITS

Flip-flops; squaring, pulse, pulse inverting, and linear amplifiers; one shot; NPN and PNP emitter followers; DC and pulse "And" and "Or" gates; reset generator; ring counter; multivibrator; blocking and crystal oscillators; relay driver; and many others.



PLASTIC-ENCASED CIRCUIT CARDS

UNIQUE BREADBOARD SYSTEM

Time-saving features are incorporated in the design of the EECO Breadboard system for use with T-Series plug-in circuits. The entire system is designed around plastic circuit cards with holes for patch cords. These cards, which show circuit symbol, input and output connections, power connections, etc., are put in place on the panel in the circuit line-up to be tried. The circuits are then plugged in above the cards and the various circuits interconnected with patch cords. Holes in cards become connection guides. No soldering or breadboard sketches are required to hook-up simple systems. Any T-Series unit can be plugged into any socket and a minimum of test equipment is required.

VACUUM TUBE CIRCUITS: Please refer to the 1958 EEM or your local Walkirt representative for a tabulation of many of the popular Walkirt vacuum tube plug-in circuit modules

NOTES:

1. **Power Requirements:** Most of the circuits tabulated above are designed to operate with -18, -6 and +6 volts, but many of the units will operate with any single voltage or polarity between 3 and 24 volts.
2. **Environmental:** All Walkirt units are solidly encapsulated in a hardy epoxy resin, assuring absolute long term reliability under the most adverse environmental conditions.
3. **Delivery:** For that really urgent job, contact Walkirt! Most of the circuits tabulated, and many more, are normally available for immediate stock delivery.
4. **Prices** shown are net. Substantial quantity discounts for 10 or more units are available from your Walkirt representative!
5. **Cost:** In today's competitive markets, reliability and cost are factors for prime consideration. Compare Walkirt's prices. Remember,

VARI-L

ELECTRICALLY-VARIABLE INDUCTORS

FOR NON-MECHANICAL CONTROL OF INDUCTANCE, REACTANCE, AND RESONANT FREQUENCY

Our five years of research, development, and manufacture in the field of high-frequency saturable-core reactors has resulted in acceptance of the VARI-L Inductor as a standard circuit element in a long list of military and commercial instruments such as spectrum analyzers, receivers, modulators, frequency synthesizers, and swept-frequency test sets of all kinds.

LET THEM PROVE THEIR VERSATILITY IN YOUR CIRCUIT

Our inductors are used by industry for controlling frequency automatically in a broad range of applications, from phase-lock circuits where frequency shift covers a part of one cycle, clear up to cases where the swing is 100 MC or more.

PUT THEM IN YOUR LABORATORY STOCK FOR READY ACCESS BY ENGINEERS

In the planning or technical-proposal stage, a few days' time is often very important. If the stock units prove out your idea but need modification for the final design, we can usually have the new version ready for the bread-board work. We will work closely with you throughout the development to assist you in meeting your prototype delivery date promptly.

RELIABILITY and REPEATABILITY ARE WATCHWORDS IN OUR PLANT

The repeated re-specification of VARI-L components for critical equipment attests to the effectiveness of this policy. To the best of our knowledge, field failure of one of our inductors has never occurred.

COMING SOON — ULTRA-STABLE VARI-L INDUCTORS

In the past few months our engineers have made a breakthrough in the application of the stabilized molybdenum permalloy powder core to the variable inductor for frequencies from 5 MC downward. This core, while inherently insensitive to temperature change and thus very desirable from a frequency-controlling standpoint, has been thought to be too "stiff" to be saturable with reasonable control power — and therefore not applicable to variable-inductor usage except for low-range modulation. However, we have now produced electrically-variable inductors with ranges as high as 3:1 in frequency, retaining at the same time the stability of the powder core. Hysterisis is very low, so they are ideal for frequency-modulation and telemetering applications. Full data on this line will be published shortly; meanwhile, we shall be glad to send you preliminary data on request.

A partial listing of stock models is given on the facing page. For complete information, send for our General Catalog.

FIXED PAD ATTENUATORS & TERMINATIONS

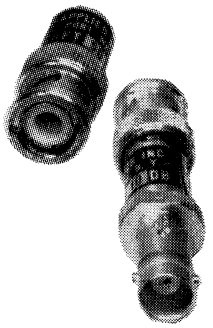
DC to 2500 mcs

FOR TYPES BNC, TNC, & N CONNECTORS

Applied Research Inc. has developed an integrated line of fixed pad attenuators, terminations and impedance matching transformers. These products provide means for rapid and accurate division of voltages over the frequency range of DC to 2500 mcs, and for the matching of different impedances with minimum loss over a broad frequency band. The unit cost is within the practical price range of the large and small equipment user, as well as the research and experimental user.

Attenuators and Terminations

TYPE BNC CONNECTORS



The need for fixed pad attenuators and terminations equipped with Type BNC connectors is met by Applied Research Inc. Types HFA-50 and HFA-75 attenuators, and Types HFT-50 and HFT-75 terminations.

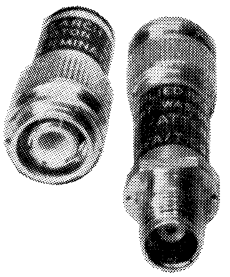
Type HFA-50 and HFA-75 fixed pad attenuators are usable in the DC to 1000 mcs range. The impedance of Type HFA-50 is 52.5 ohms and that of Type HFA-75 is 75 ohms. Both models have a VSWR of 1.2 up to 1000 mcs. Standard models of Type HFA-50 are available in attenuation values of from 1 to 20 db. Type HFA-75 may be had in standard models of 2, 3, 6, 10, or 20 db attenuation.

The accuracy of both Type HFA-50 and HFA-75 is ±½ db. The average power rating is ½ watt.

In the same family of Type BNC equipment, Applied Research Inc. presents the Type HFT-50 and HFT-75 coaxial terminations. Impedance of Type HFT-50 is 52.5 ohms, while that of Type HFT-75 is 75 ohms. Their maximum VSWR, up to 1000 mcs, is 1.2.

Attenuators and Terminations

TYPE TNC CONNECTORS



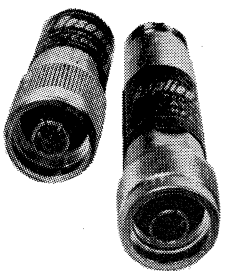
Users of Type TNC-connector equipped devices will welcome the new Applied Research Inc. Type HFA/T fixed pad attenuators and Type HFT/T terminations.

Type HFA/T-50 and Type HFA/T-75 fixed pad attenuators are usable in the DC to 2000 mcs range. The impedance of Type HFA/T-50 is 52.5 ohms and that of Type HFA/T-75 is 75 ohms. Both models have a maximum VSWR of 1.2 up to 2000 mcs. Standard models of Type HFA/T-50 are available in attenuation values of from 1 to 20 db. Type HFA/T-75 may be had in standard models of 2, 3, 6, 10, or 20 db attenuation. The accuracy of both Type HFA/T-50 and HFA/T-75 is ±½ db to 1000 mcs and ±¾ db to 2000 mcs. The average power rating is ½ watt.

Coaxial terminations Type HFT/T-50 and Type HFT/T-75 complete the additions to the TNC family. Type HFT/T-50 has an impedance of 52.5 ohms, while that of Type HFT/T-75 is 75 ohms. Their maximum VSWR up to 2000 mcs is 1.2.

Attenuators and Terminations

TYPE N CONNECTORS



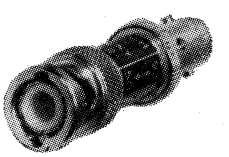
For applications using Type N connectors, a family of fixed attenuators and a termination utilizing these connectors are now available.

Type HFA/N-50 fixed pad attenuators have a nominal impedance of 52.5 ohms. They are usable up to 2500 mcs. The maximum VSWR, from DC to 2500 mcs, is 1.2. The average power rating is ½ watt. The Type HFA/N-50 is available in standard models for values of attenuation of 1, 2, 3, 4, 6, 10, 12, 15, and 20 db.

The need for a Type N coaxial termination is met by Applied Research Inc. Type HFT/N-50 termination. It has an impedance of 52.5 ohms and a maximum VSWR of 1.2 from DC to 2500 mcs.

IMPEDANCE TRANSFORMERS

DC to 1000 mcs



The Type HFAM Impedance Matching Transformers provide an expedient means of matching impedances as follows 50/75; 50/93; 75/50; 75/93; 93/50; 93/75. Advantages include operation at minimum loss over a broad band of frequencies, small size, maximum VSWR of 1.2 at 1000 mcs.

CLOSED-CIRCUIT TELEVISION SYSTEMS

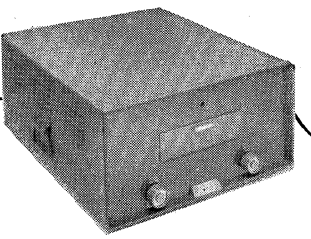
...for Modern Visual Communications

The Industrial Products Division of ITT manufactures a complete, quality line of closed-circuit television systems at low cost, backed by a worldwide network of service specialists. Our systems engineers are ready at all times to design and install a visual communications system exactly suited to meet your specific needs.

THE BASIC SYSTEM

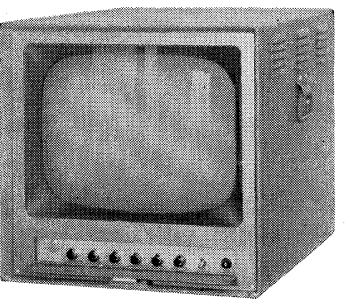
VIDICON CAMERA MODEL 701

This is the eye of the system. It can watch an action or process for you in locations that would be too inaccessible or hazardous for you to approach. Every ITT Vidicon Camera is equipped with an electronically controlled automatic light compensator (no moving parts) that instantly and automatically accommodates light changes in the order of 10,000 to 1 with no change in iris setting. Optical focus is remote controlled. Only one multiconductor cable is required for both video and audio communication between camera and control unit. Special circuits are also provided to protect the Vidicon tube when operated without sweep.



CAMERA CONTROL UNIT MODEL 702

This is the heart of the system. It contains all of the electronic apparatus necessary both to power the camera and to transmit the television image to the monitor. Major factors in picture stability and quality are the high-quality sync generator and electronically regulated power supply housed within this unit.



VIDEO MONITOR MODEL 717-C

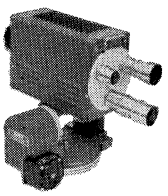
This is the screen that presents the whole, clear picture to you while you observe at a safe and convenient location. The ITT Video Monitor provides what is generally accepted as the finest picture in closed-circuit television. It offers wide bandwidth, 600-line resolution, and stable interlace.

OTHER ITT SYSTEMS COMPONENTS

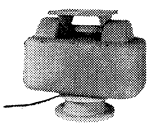
The completeness of ITT's full line of closed-circuit television systems components enables our systems engineers to design specially tailored systems — no matter how complex — without having to compromise because of limiting factors Since all components are compatible, any basic ITT TV system can be flexibly expanded or modified to meet changing conditions.

HERE ARE SOME OF THE STANDARD COMPONENTS USED IN ITT SYSTEMS:

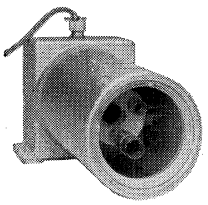
CAMERA COMPONENTS AND ACCESSORIES



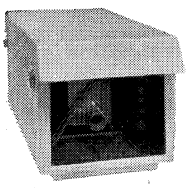
VIDICON CAMERA MODEL 701 WITH 3-LENS TURRET AND PAN AND TILT



OUTDOOR PAN-AND-TILT UNIT



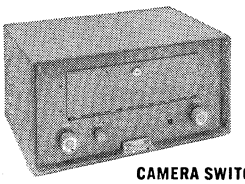
EXPLOSION-PROOF HOUSING



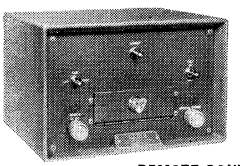
ALL-WEATHER HOUSING

3- and 4-lens turret cameras; remote-control pan-and-tilt units, both indoor and outdoor models; camera enclosures for extreme environmental conditions include explosion-proof, all-weather, and underwater housings; tripods; standard, zoom, and other special-purpose lenses.

CONTROLS



CAMERA SWITCHER FOR MULTIPLE CAMERAS

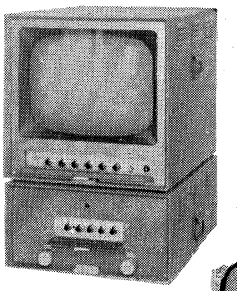


REMOTE CONTROL BOX

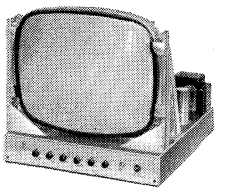
When two or more Vidicon Cameras are used in a system, the Camera Switcher provides a means of selecting in any sequence the camera view it is desired to monitor.

The Remote Control Box provides optional controls for remote optical focus, turret switch, pan and tilt, zoom and iris — even for windshield wiper on All-Weather Housing

MONITORS



VIDEO MONITOR MODEL 717-C MAY BE POSITIONED ON TOP OF CONTROL UNIT MODEL 702-C



17" MONITOR CHASSIS

ITT Video Monitors are available in both cabinet and chassis models and in all picture tube sizes from 8" through 27". They feature aluminized picture tube, 600-line resolution, polaroid filter glass (removable from front). Controls behind the protective door on the control panel include brightness, contrast, power on-off, horizontal hold, vertical hold, horizontal drive, height, and vertical linearity. May be operated in parallel with other monitors and optionally from external sync.

THE NEW Interstate TV CAMERA

Remote observation of hazardous mechanical, chemical or nuclear operations are feasible with either the Interstate Electronics Corporation closed-circuit color television system or the very-high-resolution monochrome television system where very fine details must be observed. The television cameras are remotely focused and aimed from a safe position by the observer. The Zoom-type lens allows remote control of exposure and focal length. The Television Department of Interstate Electronics Corporation is primarily interested in areas of performance beyond the present state of the art. Equipment and systems are available to customer's specifications in the area of color, very high resolution, flying spot, slow-scan and 3-D techniques. BURROUGHS COMPUTER SYSTEM COMPONENTS

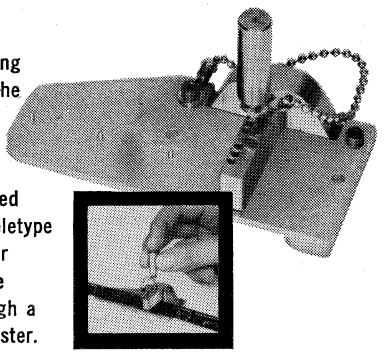
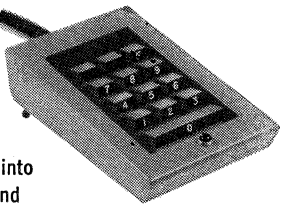
MANUAL TAPE PUNCH



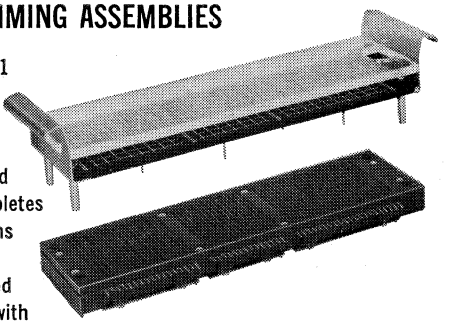
Eliminates the problem of re-inserting perforated tape for repunching in the main perforating unit. A precision unit with particular application as a method for insertion of information into an already prepared tape. It accommodates standard Teletype and Commercial Controls Flexowriter tapes, and corrects up to an 8-hole code. Tape is easily inserted through a guided slot and held in perfect register.

DECIMAL KEYBOARDS



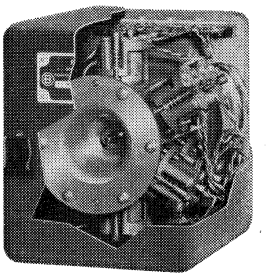
The answer to the widespread need for a modestly priced, versatile manual-input device. Thoroughly proven with the Burroughs 205 and 220 computing systems, the Decimal Keyboard is a 13-key unit that can be readily integrated into a wide variety of data processing and communications systems. Compact, with feather-light touch which provides high speed of input. A 16-key unit is also available.

PINBOARD PROGRAMMING ASSEMBLIES



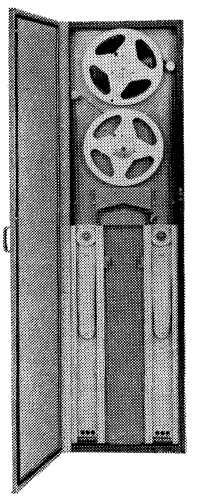
Used in the Burroughs E101 desk-size computer, now individually available as a basic control unit or stored program device. Simple and versatile: a single pin completes a circuit. Complete programs can be quickly changed by inserting previously prepared plug-in units. Expandable, with three types of pinboard receptacle units. Compact: 11¾" by 3⅜".

MAGNETIC STORAGE DRUM



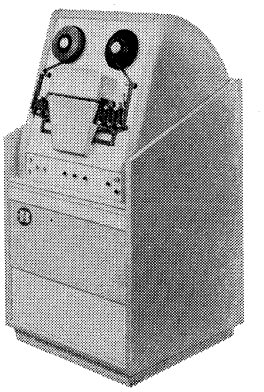
A small, high-speed magnetic drum for intermediate storage—proven in use with Burroughs 205 and 220 computing systems. It buffers information between the computer and various input-output units. Revolves at 21, 600 rpm, permitting access to stored data in average time of 1.4 milliseconds. Easy matching with either transistor or vacuum tube circuitry. Furnished complete, including 10 dual read-write head assemblies and drive motor.

DIGITAL MAGNETIC TAPE TRANSPORTS



Several transports are offered to meet a variety of tape speed and tape width requirements. Bi-directional units operate at speeds up to 75 inches per second. Multiple speed units are also available. Ten-speed transport handles tape at speeds from 1½ to 90 inches per second. All transports incorporate vacuum controlled reel servo systems for gentle tape handling, end-of-tape sensing, fast start and stop, remote and local control, easy threading and dust free operation. A file protection device and air-conditioning manifolds are available. Years of proven reliability in Burroughs computer systems and other digital applications.

PHOTOREADER



Reads 1,000 characters per second... stops on a single character, then reads the next within five milliseconds after restart. The finest and fastest precision perforated paper-tape-reader commercially available as a component. Developed as an input unit for the Burroughs 220 computing system, the Photoreader may be mounted in any standard 19" cabinetry—or ordered already housed in the 220 cabinet, as pictured.

For complete details on any of the above components, write to Component Sales, ElectroData Division, Pasadena, California.

Price (fob factory)	$950

INLINE-INPLANE READOUT

The Model 401A Inline Readout represents a new concept in digital read-out instrumentation. It is designed to prevent visual errors caused by lamp failure and other potential sources of inaccuracy. Where contemporary instruments use filament-type lamps for edge-lighted, masked or projection type illumination, the 401A accurately forms each 2¼" high numeral from 40 small, long-life neon lamps. A memory circuit retains the read-out data until receiving a command from the counting instrument, thus preventing confusion in reading while the counting instrument is cycling. The memory circuit may be overridden intentionally to observe low speed cycling. Data may be retained indefinitely by preventing reception of the read-out command from the counting instrument.

SPECIFICATIONS:

Indicating capacity	6 digits
Accuracy	Identical to counting instrument
Signal input	4-line 1-2-2-4 binary decimal code and read command from counting instrument for automatic operation
Price (fob factory)	$770 (6 digit)

INLINE NIXIE READOUT

To fill the demand for a low cost inline readout CMC offers a special decade utilizing the well known Nixie tube. The Nixie readout decade displays data in 1" high illuminated numerals. By replacing the standard decades in most CMC instruments with the Nixie readout decade a display as shown in the photo is obtained. The Nixie readout decade is directly interchangeable in equipment using standard decades without circuit changes. This modification may be made on instruments now in the field or ordered as a modification when purchasing new instruments.

The price of the Nixie readout modification is $60. per decade when purchasing new instruments. Modification to instruments now in the field costs an additional $25. front panel and labor charge.

OTHER CMC INSTRUMENTS

The Model 202-A Time-Function Translator permits instant direct read-out of unknown quantities by translating one function of time into another function of time. A good example is jet engine analysis where translation of fuel flow into pounds, gallons, pounds per hour or gallons per hour, etc., is often required.

The Model 620-A Go-No-Go Gauge is a direct reading frequency counter of the coincidence type which provides three types of output rate information for control and monitoring between any two preselected limits falling in the 1 to 40,000 events-per-second range "High" "In-limits" and "Low".

The Model 620 consists of a basic frequency counter, using dual preset decade counting units, and a relay control circuit. The frequency counter operates as a standard frequency counter and the relay control circuit provides the go-no-go information from data provided by the counter circuit.

CMC instruments carry a one year unconditional guarantee from the date of purchase. Engineering Sales representatives, located in 26 cities through the U.S. and Canada are ready to serve you and demonstrate CMC equipment. Call or write direct to the factory for the new 1959 CMC short form catalog.

TWENTY SEVEN DIFFERENT MODELS of decade plug-in units are available for almost every conceivable digital data display or control problem. Units vary in price from $33.00 to $155.00 depending on function. Special OEM discount prices on request.

In addition to the standard specifications described above, there are 21 different standard modifications and combinations of modifications available to meet your specific requirements. CMC also maintains a separate staff of applications engineers to assist you with problems involving special engineering in fields of digital control and digital data handling techniques.

RUGGED CONSTRUCTION—All CMC instruments feature unitized construction for ruggedness, reduced weight, and functional styling. Integrating the wrap-around cabinet with the chassis results in a sturdy cohesive structure. This unitized concept designs ruggedness and styling into every instrument at lower weight and cost. CMC instruments can also be rack mounted by use of a simple adapter provided at slight additional charge, (option D).

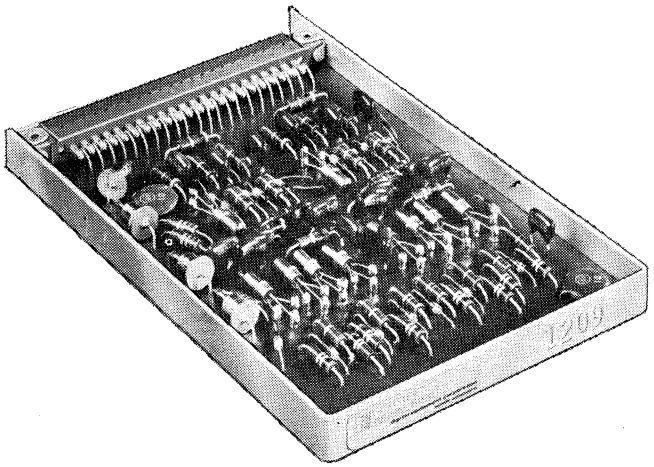
Building Blocks / SPEEDS UP TO 5 MEGACYCLES

SYSTEM BUILDING BLOCKS



DEC System Building Blocks are a fully compatible family of saturated transistor digital circuits. They are used in making permanent or semi-permanent digital computer type systems and in other data handling applications. They operate at any speed up to 5 megacycles.

Only two power supply voltages are used (+10 volts and —15 volts). Circuits and power distribution are designed for marginal checking by varying the +10 volt supply. DEC Standard Pulses are 2.5 volts in amplitude and 70 millimicroseconds wide. DEC Standard Levels are ground or —3 volts. All circuits are designed to provide ease of use and maximum freedom for the logical designer. For example, they use static type Flip-Flops having continuous DC output signals and pulse delays so actions need not occur at any fixed clock rate.

DEC System Building Blocks feature dip solder printed circuits mounted on protective aluminum frames measuring ½" x 4½" x 6". The standard mounting chassis, designed for rack mounting, measures 5" x 19" x 7" and will accommodate 25 standard plug-in units. A full line of accessories, including power supplies, is available from DEC.

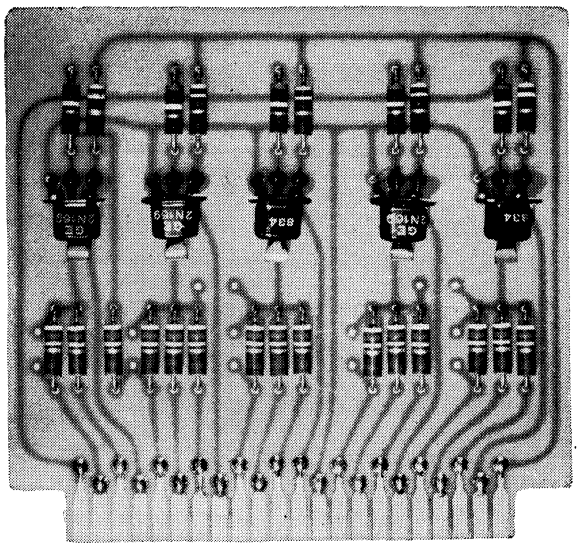
NOR LOGIC

RANSOM RESEARCH NOR LOGIC



In addition to the standard line of diode logic and associated flip flops, etc., *Ransom Research* produces the Series N3 Logical Elements using resistors instead of diodes for the basic logic element. This is the so called NOR logic. Standard *Ransom Research NOR* logic is conservatively rated for operation at 50KC; special transistors may be used to appreciably increase this maximum operating frequency.

Transistor *NOR* circuits are specially designed to take advantage of the low power requirements and relatively low cost of the transistor. This logic employs a reliable and stable transistor circuit, resulting in a single logical element able to solve all logical equations. The basic circuit employs a transistor in the common emitter configuration. This transistor is operated as a switch: when the input voltage exceeds a certain minimum (for NPN transistors a positive voltage) the transistor switches from the cutoff state to saturation. While the transistor is in the cutoff state, the collector to emitter impedance is very high, and therefore the output level (unloaded) is essentially the supply voltage. The output impedance in this condition is therefore the collector load resistance. When the transistor is in the saturated condition, on the other hand, the collector to emitter impedance becomes quite low, and the output is clamped at the emitter voltage. The output impedance of the transistor in the saturated condition is a function of the parameters of the transistor, but, depending on the transistor, this may be as low as several ohms, or even tenths of ohms.

Ransom Research NOR logic elements are available with either NPN or PNP transistors, depending on the output levels desired; a variety of standard RR Computer Elements printed circuit cards provide *NOR* logic elements with a choice of 2, 3 or 6 inputs to each element. In addition, special units are available for particular applications. For additional information regarding RR *NOR* logic, request *Technical Bulletin C-40.*

RANSOM RESEARCH COMPUTER ELEMENTS

Ransom Research also produces a complete line of Computer Elements for high speed logical operations. Such units as diode gates, flip flops, single shot multivibrators, amplifiers, and the like, are available as a compatible series of logical components. All RR Computer Elements are mounted on a $4\frac{1}{2}''$ x $5''$ printed circuit card, and require a 22-pin printed circuit connector. They may also be mounted in our Type R-1 Card Files. Complete technical literature is available on request.

Where the use of our standard Computer Elements is contemplated, *Ransom Research* is pleased to offer advice as to the most effective combinations of RR Computer Elements to meet a specific requirement. There is no charge for this service.

RANSOM RESEARCH DEVELOPMENT SERVICES

Ransom Research will develop and/or produce any control system or data processing system to customer specifications. Most problems can be solved by combinations of RR Computer Elements, but special circuits, such as adders, half-adders, etc., are available or may be designed to meet particular requirements. We invite your inquiries on systems requirements.

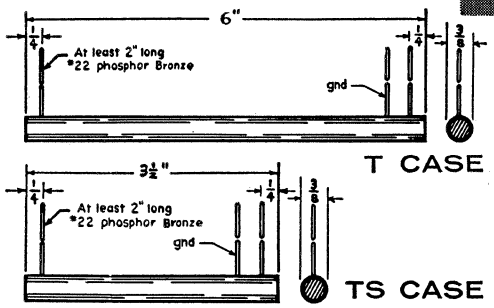
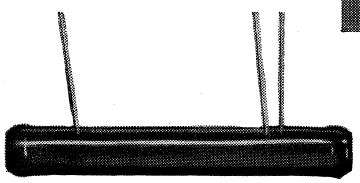
Epoxy Cases



Epoxy encapsulation with operating temperature from −25°C to +85°C. Standard stock delay lines are available with over-all lengths of 6″ or 3½″. Other epoxy-case delay lines can be had with lengths in ¼″ steps from 2½″ to 11¼″.

Dip-Coated Delay Lines



For economy, stick is dip-coated in highly moisture-resistant epoxy resin. Ambient temperature range: −25°C to +85°C. Length ranges from 1¾″ to 11″, depending on delay and winding of stick used. Any single stick of any winding type can be supplied with dip coating.

Custom-Built Delay Lines

We are prepared to design and produce lumped constant or distributed constant continuously-wound delay lines to specifications or to meet specific performance characteristics. Variations in delays, impedances and bandwidth can be designed, as well as types of mountings to meet physical and electrical requirements.

Non-stock standard winding delay lines in sample quantities, in any of our standard cases are available with 2-week delivery.

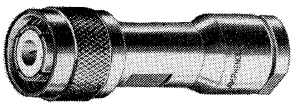
AN/MS CONNECTORS

AN/MS connectors are supplied to the latest issue of MIL-C-5015. Shell types available are 3100, 3102, 3106, 3107 and 3108. Constructions A, B and C, as well as AMPHENOL's new E—"Stub E"—are offered.

Features of AMPHENOL AN/MS connectors include heavily silver-plated contacts with the longest wiping action of any AN/MS contact.

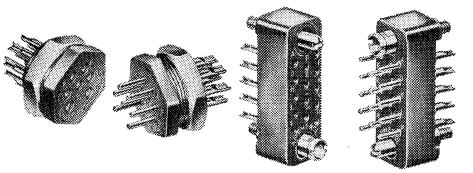
Offered as optional is AMPHENOL'S superior gold-over-silver plating which provides faster, easier soldering and eliminates oxidation problems.



RF CONNECTORS

Series N, BNC, HN, BN, C, LC, LT and UHF are made by AMPHENOL in Mil-approved UG-/U constructions. In addition, there are exclusive AMPHENOL designs—SUBMINAX®, a complete line of highly reliable subminiature RFs, and "Quick-Crimp" BNC connectors, which speed up assembly time by as much as 50%.

Patented "Captivated Contact" construction is available in Series N, HN and BNC. This design "captures" the contact within the connector body to prevent disconnects when cable dielectrics or conductors recede under stress.



RACK & PANEL CONNECTORS

Three different configurations are available in AMPHENOL rack & panel connectors. Miniature hexagon connectors have 4, 5, 7 or 9 contacts; interchangeable hardware makes them unusually versatile. Miniature Rectangular connectors have as few as 7, as many as 34 contacts. AMPHENOL's standard Rectangulars, with 11, 15 or 20 contacts, can be supplied with or without housings and cable clamps. Contacts in all configurations are gold-plated.

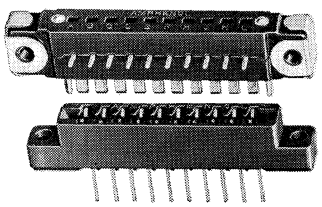
COAXIAL CABLE

AMPHENOL coaxial cable and wire products represent the most complete line available to industry. Over 100 RG-/U cables, including a full selection of Teflon dielectric types, are made by AMPHENOL.

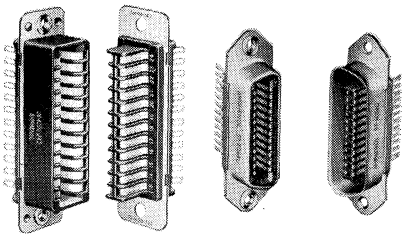
Special types made only by AMPHENOL include "Aljak" aluminum-jacketed Teflon or polyethylene dielectric cables; "Polyfoam" cables with cellular polyethylene dielectrics; Noise-free cables and many others. Subminax® Teflon cables match subminiature RF connectors.



PRINTED CIRCUIT CONNECTORS

AMPHENOL Prin-Cir printed circuit board receptacles feature a "circle lip" contact design that can't be overstressed or "set" even after repeated insertions. Low millivolt drop, long contact life and gold-plating of contacts are other important features. 6, 12, 15, 18 and 22 contacts.

Prin-Cir plugs and adapters which mate with the receptacles are made with 10, 15, 18 and 22 contacts. Contacts are gold-plated, have 6 different tail constructions.



BLUE RIBBON & MICRO-RIBBON CONNECTORS

AMPHENOL's famous Blue Ribbon connectors and the miniaturized Micro-Ribbons are now available in a variety of constructions. Standard Blue Ribbon connectors are made with straight inserts with mounting plates, latch-lock housings or keyed shells. Micro-Ribbons have straight shells or latched shells for cable-to-chassis mounting.

The unique "ribbon"-like contact is gold-plated, has self-wiping, self-cleaning action. Dielectric material is diallyl phthalate.

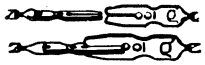
Includes Elco's new right-angle Varicon; regular and taper tab male and female contacts; ruggedized end sections; center sections; covers; brackets; cable clamps; screws; nuts; Assembly Instructions; re-ordering sheet. In handsome transparent plastic box.

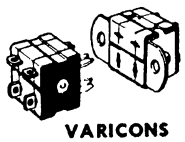
GVK — 1 (GP) LIST 40.00 Each
GVK — 2 (LL) LIST 50.00 Each

Smaller Kits Also Available **GP-1 10.00 — GP-2 13.75**

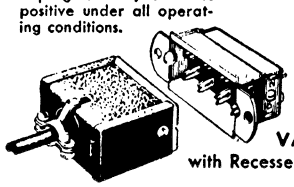
GENERAL SPECIFICATIONS: Current Rating 15 Amps., 115 Volts (in cover); 30 Amps. (in free air) (withstanding voltage between closest terminals 4000 volts); Contact Resistance .0001 ohm. Low Capacitance. All Male & Female components are identical. 300 ohm line spacing. Contacts in use are always under pressure, cannot be overstressed or overstrained.



Patented fork-like contact, same for both male and female connectors; provides "spring" contact with wiping action; remains positive under all operating conditions.

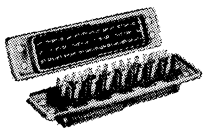


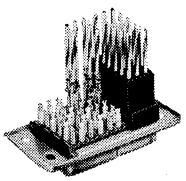
VARICONS with Bracket



VARICONS with Recessed Housing

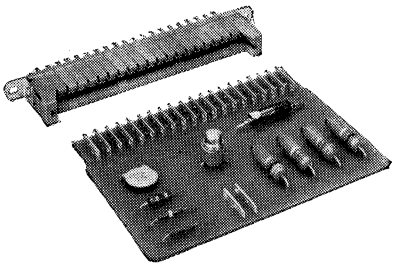
Additional contact surface provided by 45° bevel running down full length of forks. Resulting large contact area provides for high voltage and current capacity; no intermittents, etc.





SERIES 8000 SUB-MINIATURE VARICON CONNECTORS

Offers maximum number of contacts in minimum space where increased contact density is requisite. Available in 16, 18, 40, 45, 48, 54 contacts. 8, 24, 32, 64 and 80 contacts available shortly. 40-contact rack-and-panel single-tier connector shown at top; 48-contact double-tier connector, showing wiring connections to contacts and honeycomb insulator pictured below. Write for Bulletin 107.



SERIES 5002 PRINTED CIRCUIT VARICON CONNECTORS

Male contacts mounted on printed circuit board, spaced at .200" centers to match the female connectors. Method of staking the male contacts to board engineered by Elco to provide permanent contact with circuitry without possibility of wear or lifting copper lines. Contact terminations designed to permit connector to be mounted on another p. c. board and staked to unit. For conventional chassis mounting, printed circuit Varicon connectors can be furnished with brackets mounted on ends. Write for Bulletin No. 101A.

P. C. CONNECTORS

Card edge connector for 1/16" p.c. board. Available in 20 single contacts with wire hole; 22 double contacts with taper tab; 18 double contacts with wire hole. Employs ribbon contacts, the design permitting flexing at bottom, thereby creating almost constant pressure at various board thicknesses within NEMA tolerance limits. Write for Bulletin 103-A.

VARICON CATALOG V-2

Space limitations do not allow for the complete description of the Varicon Connector System. We will be happy to forward you our Varicon Catalog V-2, upon request on your company letterhead. This profusely illustrated Catalog, with data, specifications and prints is a "must" in your library.

MORE ABOUT VARICON CONNECTORS

Only with Varicons, polarity combinations may be varied on individual units with the same number of contacts, so that accidental mating of dissimilar combinations cannot occur. This is Elco's exclusive "Keying Control" principle.

Varicons were designed with primary consideration of mass production application; for quick and easy soldering of wire, or for solderless connections to contacts. Safe and positive cable retention and simplicity of installation is achieved by means of cable clamps.

Illustrated cross-section of pair of mated contacts shows how additional contact area provides for high voltage and current capacity; positive contact results at all times.

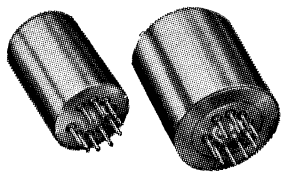
MAGNETIC MODULATORS

Super-sensitive, d.c. to a.c., translation devices of the second-harmonic variety, for converting very small d-c and low-frequency a-c currents into alternating currents of the chosen carrier frequency. One of the biggest advantages of the magnetic modulator, aside from its high sensitivity, is that it can work from d.c. to the highest audio frequency permitted by the carrier employed. When followed by a synchronous demodulator, phase and polarity relationships are preserved.



Part No.	D-C Sensitivity	Minimum Band Width	2nd Harmonic Operating Freq. Range	Operating Temperature Range	Type of Mounting	Dimensions	Price Each
B66	10^{-7} Amps.	0 to 100 c.p.s.	1 to 10 Kc.	*—30 to +250°F	9 Pin Miniature Socket	1 3/16 Diameter X 1 1/4	$28.00
B105	10^{-8} Amps.	0 to 5 Kc.	10 to 100 Kc.	#+65 to 150°F	9 Pin Miniature Socket	7/8 Diam. X 1 3/16	35.00

* No measurable change in sensitivity of the B66 is experienced over the temperature range shown.

The B105 loses sensitivity with increasing temperature at the rate of about 1% per degree F.

High turns ratio transformers to couple the filter to the modulator exciter winding are also desirable and are provided as follows:

Part Number	Function	Dimensions	Price Each
B242	To couple C66 or C68 to B66	1½ Diam. x 7/8	$9.00
B243	To couple C65 or C67 to B105	1½ Diam. x 7/8	9.00

To fully utilize a magnetic modulator, the 2nd harmonic in the exciting current must be as completely removed as possible. To assist in accomplishing this result Low-Pass filters are provided for the excitation circuit as follows:

Part No.	Characteristic Impedance	Insertion Loss—Db.	Cutoff Frequency	Maximum Attenuation Frequency	Maximum Attenuation Db.	Dimensions	Price Each
C66	2200 Ω	0.4 or Less	1.6 Kc.	2.0 Kc.	60 or greater	2 1/16 x 2 7/8 x 1 5/16	$39.00
C68	2200 Ω	0.4 or Less	4.0 Kc.	5.0 Kc.	60 or greater	2 1/16 x 2 7/8 x 1 5/16	39.00
C65	2200 Ω	0.4 or Less	16 Kc.	20. Kc.	80 or greater	2 1/16 x 2 7/8 x 1 5/16	35.00
C67	2200 Ω	0.4 or Less	40 Kc.	50. Kc.	80 or greater	2 1/16 x 2 7/8 x 1 5/16	35.00

Custom designs to your specifications. The above are but a few examples of the transformers we manufacture.

BI-STABLE

APPLICATIONS

These units employ a unique combination of magnetic and transistor circuitry to achieve an input seneitivity of 5 x 10 -8 watts. All units are supplied with multiple control windings which permit operation from a wide range of source impedances.

The MAGAMP Bistable is also available with a self-contained ajustable reference supply of plus or minus ½% accuracy. The reference supply is internally connected to a separate winding and will provide enough power to displace the operating point by an amount equivalent to a signal input of 1000 times the loop width. With this reference, the bistable can be used in regulating systems to provide a switching sensitivity of 0.1% of full output.

No vacuum tubes, no moving parts, no delicate contacts, and requires no maintenance.

PROXIMITY LIMIT SWITCH

APPLICATIONS

The Proximity Limit Switch is suitable for application wherever limits must be placed on the movement of a machine or a machine part. It may be used for many conventional limit switch applications, and will provide dependable service where other switches are subject to frequent failure.

ADVANTAGES

Long Life: The life of the static Proximity Limit switch is independent of the number of operations — no vacuum tubes are used.
Environment-Free: The Proximity Limit Switch will operate dependably where conventional limit switches are subject to failure because of oil mist, iron filings, sand, dust and dirt.
Corrosion-Proof: The limit switch is immune to corrosion and vibration.

CHARACTERISTICS

Excitation: 117 volts ±10% at 60 ±5 cps
Maximum Load Output: 24 volts d-c at 335 ma (with an inductive load — relay or solenoid).
Response Time: 25 milliseconds minimum (total time from actuation of sensing element to final output from control element).
Operations Per Second: 20 maximum
Adjustable Operating Distance: ⅛ inch min. to ½ inch max. and ¼ inch min. to 2 inch max.
Repeatability: Equal to resolution at all gap separations under all conditions.
Temperature Range: Minus 10°C to plus 55°C

LIMITEMP

APPLICATIONS

This new Westinghouse control device is a medium priced indicating temperature controller of unusually high reliability. The static circuitry employs magnetic and semi-conductor elements of proven reliability. There are no vacuum tubes, no moving parts, no contacts - nothing to wear out.
The new temperature controller may be used to indicate temperature and sound an alarm if temperature exceeds the preset point. Temperatures monitored may include windings of large rotating machines, bearings, process temperatures and many similar applications. The unit may also be used in conjunction with auxiliary relays or static amplifiers to form a low cost complete temperature control system combining calibrated adjustment and indication.
The unusually high reliability of this unit makes it ideal for monitoring or controlling temperature in many critical areas including nuclear controls. Special models can be supplied for military applications. Higher temperature units will be announced shortly.

CHARACTERISTICS

Input: 115 volts, 60 cycles
Output: 24 volts dc at 5 watts
Temperature Range: 100°F. to 400°F.
40°C. to 200°C.

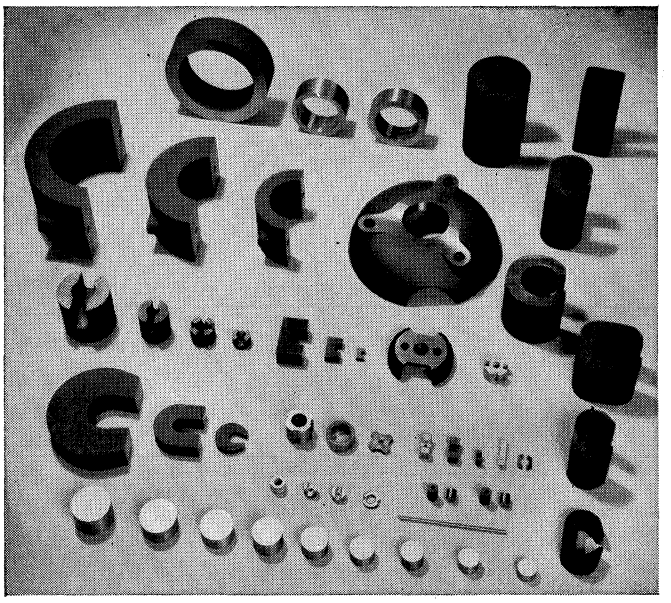
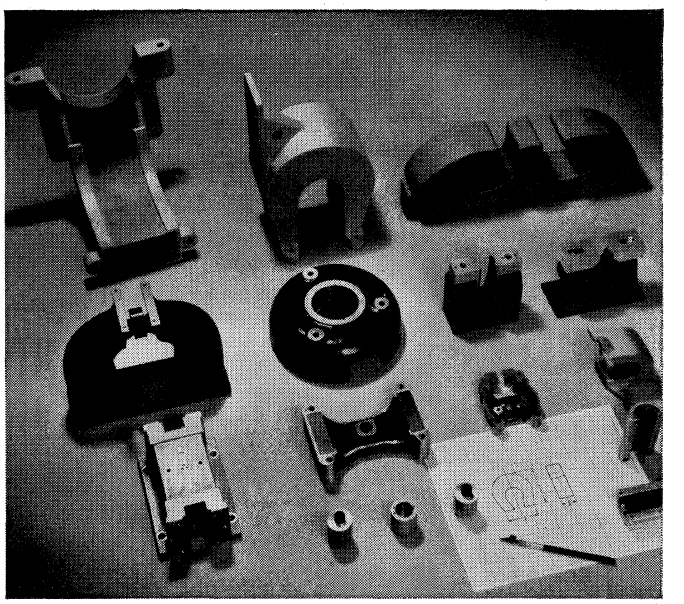
Specify "ARNOLD" for your PERMANENT MAGNET requirements



Typical group of Arnold permanent magnets, both cast and sintered types.



Typical group of permanent magnet assemblies, aluminum jacketed.

ALNICO MAGNETS

Arnold permanent magnets are available in all types of Alnico material, in sizes ranging from large castings weighing over 80 pounds to very small sintered parts weighing less than one gram.

Alnico V can usually be depended upon to deliver the greatest energy product to the magnetic circuit per unit weight of magnet material. It is therefore generally the first choice for a magnetic material except where special physical considerations are paramount.

Special assemblies such as rotors, traveling wave tube magnets, magnetron magnets, etc. may be supplied in an aluminum jacket to facilitate mounting and supply an added protection to the magnet.

Large magnet assemblies may also be supplied for mass spectrometer and other measuring applications where a high degree of stability and uniformity of field is required.

Many sizes and types of Alnico magnets are carried in stock for immediate delivery. For more information, *write for Bulletin GC-106C.*

SPECIAL PERMANENT MAGNET MATERIALS

ARNOX III

Arnox III is a molded-type magnet having high coercive force and moderately low residual induction and energy product. Principal uses are for magnetic requirements which are not stringent, and for a relatively short magnet of reasonable cross section. Accurate dimensions and close tolerances can be economically obtained. These magnets can be premagnetized before assembly, and have very high resistance to demagnetization. Slightly better magnetic properties are obtained in the pressing direction than in other directions.

ARNOX V

Arnox V is a ceramic permanent magnet material composed of highly oriented barium ferrite. It has many times the energy product of Arnox III and is comparable in many applications to Alnico V. Because of its high coercive force, its use is recommended in applications where a short magnetic length is desirable or where extremely high demagnetizing forces may be encountered. In many applications, it may be magnetized prior to assembly.

VICALLOY

Vicalloy is a carbon-free permanent magnet alloy containing about 10% vanadium, 50% cobalt and the balance iron.

Vicalloy may be fabricated in the form of castings, hot rolled bars and forgings, or cold rolled strip, wire and tubing. After suitable heat treatment, the material is quite readily machinable. Vicalloy is available on special order in bar, strip and thin tape for recording purposes. *For more information, write for "The Magneteer," Vol. 2, No. 1.*

CUNIFE

Cunife is a permanent magnet alloy of copper, nickel and iron which is malleable, ductile and machinable, after final heat treatment. The magnetic properties of Cunife are developed by cold working and are directional, with the best magnetic properties found only in the smaller sizes of rods or wires.

PROVIDE COIL MOUNTING MEANS AND RELIABLE TERMINATION OF FINE WIRES

A-1 LEAD FORMS are unexcelled when used in the construction of transformers, inductors and other miniature electronic components. The oxygen-free wire guarantees hermetic sealing when soldered directly into feed-through glass headers. A-1 LEAD FORMS are excellent for use with cup cores, toroids and steel tape transformers as they eliminate soldering of fine wire to special pins in hermetically sealed headers. These lead forms meet all military requirements on shock and vibration and will withstand 1,000 volts D.C. hi-pot and temperatures of 400°F.

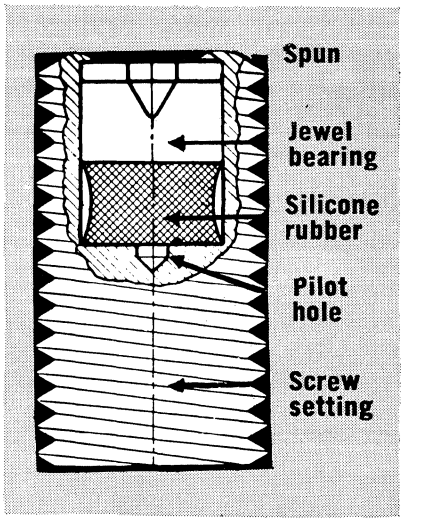
IMPROVE INSTRUMENT PERFORMANCE WITH *Bird* Precision Jewel Bearings

For low torque instruments, control devices and miniaturized aircraft, electrical and timing instruments, Bird Jewel Bearings, of sapphire or borosilicate glass, insure precision performance and longer instrument life.

Bird Jewel Bearings are economical to use yet offer these unique advantages . . . operation without lubrication through great temperature extremes . . . resistance to corrosive fumes and liquids . . . non-magnetic material . . . adaptability to many mounting arrangements.

Manufactured to exact tolerances under strict quality control methods, Bird Jewels are available in a wide variety of styles in standard sizes or supplied to customers' specifications.



CUSHION JEWEL ASSEMBLIES STOP THE SHOCK

Designed to meet the need for increased protection of jewels in meters and meter assemblies that must withstand severe testing and handling conditions, the Cushion jewel setting has given the industry an economical, new method of assembly.

Essentially the Cushion jewel assembly consists of a silicone rubber pad placed beneath the jewel in the assembly, operation. The amount of precushioning, or compression under which the jewel is set, will vary with the ultimate use. A typical assembly would have the jewel start to compress under a fixed load of 30–40 grams; at 500 grams fixed weight, the jewel is depressed approximately .010"–.015". Used with a collared pivot, this type of unit performs very well.

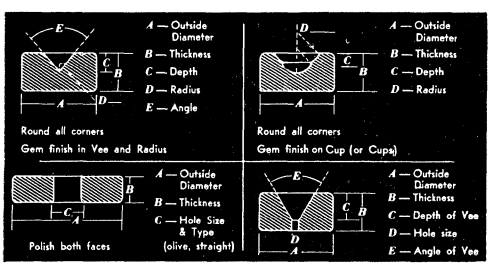
In many instances the Cushion type of mounting has enabled customers to use glass Vee jewels in movements that have a moving element heavier than 750 milligrams. Thus, cushion assemblies have helped the inexpensive glass jewel to compete with the costlier sapphire bearings.

Another advantage that several manufacturers have found in cushioned units is the reduction in jewel damage during assembly. With conventional mountings, excessive tightening can damage or break the bearing or pivot; the cushioned unit provides a factor of safety in assembly, thereby reducing waste and instrument teardown due to poor judgement in bearing adjustment.

If rejects are putting assembly costs way out of line, why not try some samples of Cushion jewel assemblies — they're yours on request.

Bird Quality-Controlled Jewels to Your Specifications

When ordering glass and sapphire jewels it is advantageous to use "stock" sizes where possible for greatest economy. However, if these sizes do not meet your needs, a simple sketch incorporating pertinent specifications will enable the Bird engineering staff to provide prompt quotations and delivery. The diagram shows the information we need to accurately fill orders for various types of jewels commonly used in instruments. Widely used mounting screws for electrical instruments are available in the following range: #1–72, #2–80, #3–56, #3–72, #4–80, #4–90 and 0.100 x 100. Other sizes available to your order. The engineering staff of the Bird Company is at your service for all small bearing problems.



Four types of jewels commonly used, with dimensional data to customize each type for your production. Specify quantity, type, dimension and whether desired unset or set in screws or bushings.

BIRD COMPLETE JEWEL ASSEMBLIES

Special mounting techniques provide assemblies to exact tolerances, in screws or bushings of any style ready for assembly in your product. Complete assemblies save time and money, cut rejects, keep production flowing smoothly.

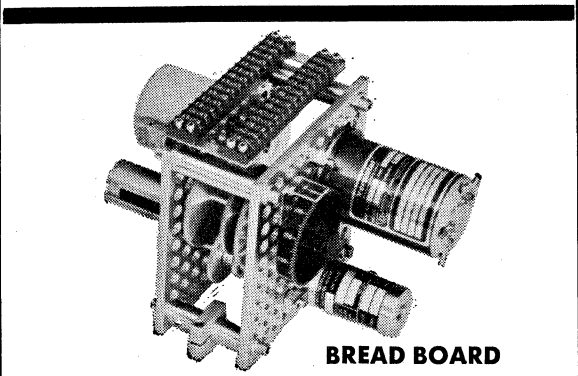
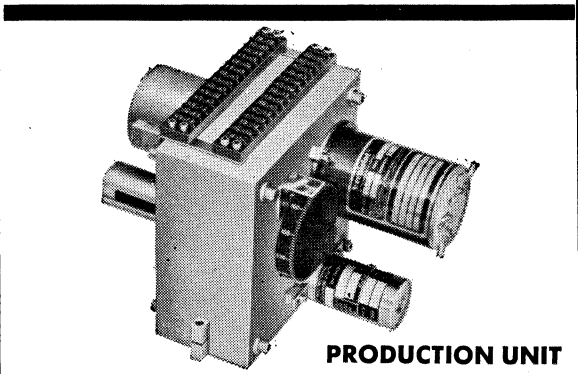
GRID LAYOUT



BREAD BOARD



PRODUCTION UNIT

THE GAP SERVO CONSTRUCTION (SC) SYSTEM

This system radically reduces the elapsed time and cost in producing servo units and gear trains by enabling one to go from a rough schematic diagram via a grid layout and stock Gap parts to a compact finished unit. The SC SYSTEM by-passes conventional gear diagrams, layouts, detail drawings, assembly drawings and small quantity machining. It has found acceptance in breadboard, test equipment, demonstration equipment, simulators and production units.

In addition to producing a unit a fraction the size and weight of a conventional breadboard built on heavy cast plates, it minimizes hand adjustments and insures physical and dynamic reproduction by use of very accurate parts.

A few advantages of the GAP SC SYSTEM are that it:

- Minimizes or eliminates entirely, design, drafting, procurement and model shop time.
- Is flexible yet produces a product approaching the configuration reasonable to expect from a production design.
- Is sufficiently compact and light for panel mounting.
- Requires only a small number of different parts because of its modular basis.
- Is structurally stable under moderately rough handling and temperature changes.
- Permits major changes with little trouble.
- Is based on reusable parts.
- Permits quick and accurate predictions of size, cost and construction time.
- Is readily adaptable to rotating components from size 8 up to 23.

The SC SYSTEM is based on equally spaced gear centers established by a pair of very accurately bored plates. Class 2 gears and class 7 bearings are used in conjunction with these plates to achieve low backlash meshes. While designed to work with any gears whose pitch is a multiple of 24, (that is 24, 48, 72, 96, 120), 72 pitch will satisfy the vast majority of requirements; thus the emphasis on 72 pitch in the catalog. The distance between adjacent holes measured along the grid is the modular distance, M, and is the mounting distance for two mating 72 pitch gears, the sum of whose teeth is 60. This permits integral ratios of 1, 2, 3, 4, 5, 7, 8, 9, and 11 to 1 plus a large number of non-integral ratios.

Available parts include plates, gears, anti-backlash gears, pinion shafts, slip clutches, adjustable mechanical and electrical stops, dials (one and two speed), differentials, zero backlash couplings, clamps and terminal blocks.

SCHEMATIC DIAGRAM

(SEE ILLUSTRATION)

For estimating and design purposes the Schematic Diagram should specify:

- Size designation or manufacturer's catalog number of rotating components. It is preferred, though not necessary, that components have shafts extending 7/16 of an inch or more.
- Relative speeds (shaft values) or ratios between rotating components and whether approximate or exact.
- Approximate motor speed and reduction in first mesh if critical.
- Rotational directions and limits where important.
- Dials and graduations desired.
- Slip clutches, couplings and electrical or mechanical limit stops.

GRID LAYOUT

(SEE ILLUSTRATION)

The grid layout is used to determine plate size and component arrangement, to serve as an assembly guide and as a permanent record of what was constructed.

It is made quickly on a special layout sheet eliminating need for anything but pencil and drawing compass. No gear tables need be referred to because gear pitch radii scales as well as rotating component diameter scales are printed right on the layout sheet.

NOTE: Gap furnishes SC SYSTEM parts, SC SYSTEM kits and complete breadboard and production units to customer schematics.

GAP SC SYSTEM KITS

All SC SYSTEM kits come in a sturdy wooden carrying case 18x18x6" deep. Each type part has its own individual compartment large enough to permit expansion beyond the largest kit. Transparent protective envelopes permit instantaneous recognition of parts. Numbers of gear teeth are stamped on all gears having more than 30 teeth. A utilization manual and layout sheets are furnished with each kit.

Kit "A" is intended to serve as an introduction to this system.

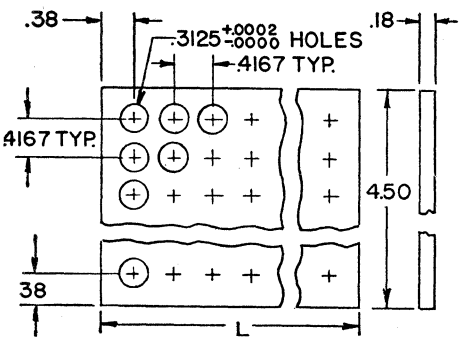
Kit "B" is intended to fulfill the need where two or three devices are under development simultaneously.

Kit "C" is intended to fill the needs of an organization carrying on a considerable variety of servo work.

A list of parts comprising each kit together with recommendations relative to specific customer requirements will be furnished on request. Custom kits frequently result in lowest cost and greatest system efficiency.

KIT & ORDER NO.	LIST PRICE
A	$ 623.00
B	$1,768.00
C	$3,477.00

PLATE



BASIC SYSTEM COMPONENTS BY GAP

The plates, part type 200, are all 10 holes wide by 10, 15, 20, 23, or 27 holes long. The holes are all bored to 0.3125 $\pm \frac{.0002}{.0000}$ diameter and the tolerance on spacing between any two holes $\pm$.0002. They are made of stress relieved, alodined aluminum .187 thick. Flatness is held to within .001 over their entire surface.

The gears are Class 2,20° PA, cut to operate at zero to .0008" backlash. They are 303 stainless or 24ST alodined aluminum depending on number of teeth. They employ a clamping means unique to the SC SYSTEM. The hub, which is integral with the face to insure concentricity, has a single slot. Clamping collar, having two setscrews at right angles, and much smaller than conventional split clamps, is slipped over the hub so both setscrews bear on the same half. A spot hole mid-way between the setscrews facilitates pinning right through the clamping collar . . . something not practical with conventional double slotted hubs. The hub extends .010 beyond the collar and there is a similar shoulder on the opposite side to butt against inner bearing races, thus eliminating need for spacers in many applications.

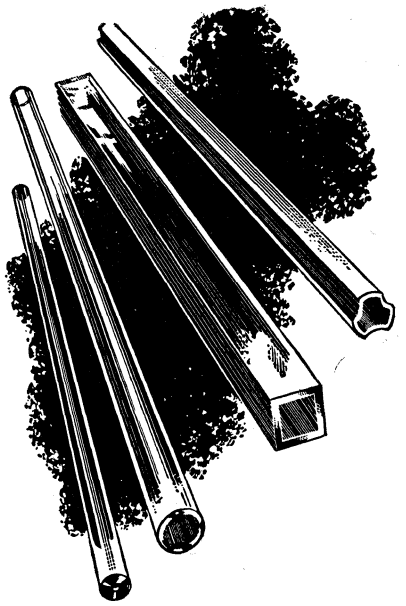
WILMAD



Precision Bore Glass Tubing

Wilmad precision glass tubing is widely accepted as a design material. Engineers have learned to rely on its extreme accuracy and uniformity. They have also found it to be an economical material due to its low initial cost and its facility of application.

All standard Wilmad tubing is worked to tolerance limits of ±0.0002". Its consistent uniformity assures the user repeatability of performance and results.

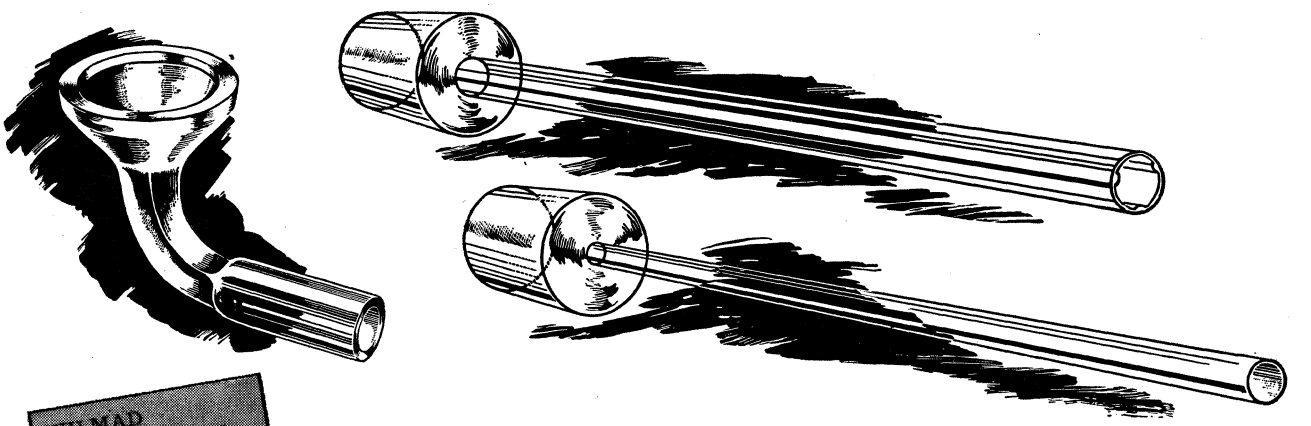
Tubing exteriors can be ground concentric with the bore when required. Close O.D. tolerances of ±0.0002" can also be maintained in this ground tubing. When specified, the ground tubing can be polished to restore transparency.

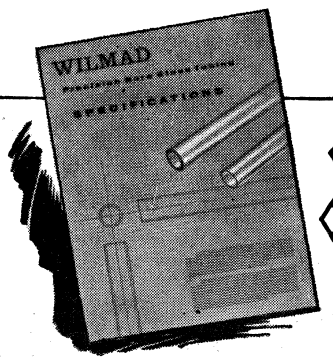
If extra straight tubing is required, extremely close camber tolerances can be held.

In addition to the standard precision bore and capillary tubing, Wilmad can supply square, rectangular and fluted tubing to your specifications.

SPECIAL GLASS COMPONENTS

Wilmad has produced many special precision glass parts for specific applications. The use of such parts has often resulted in reduced assembly and fabrication costs. In fact, Wilmad traveling wave tubing envelopes are the most widely-used in the industry. This is not unusual because they embody the characteristic accuracy and uniformity found in all Wilmad products. They are available with either plain or fluted bores. The fluted type is produced in diameters as low as .055" to the root of the flute.





For complete dimensional specifications of Wilmad Precision Bore Glass Tubing, write for Bulletin 102.

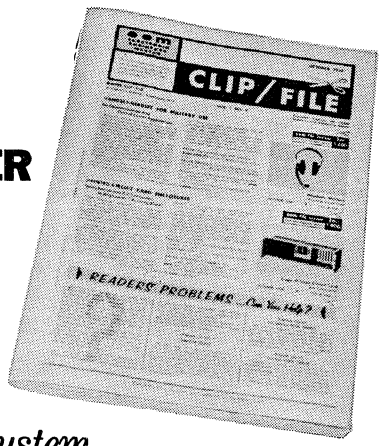
WORKING TOGETHER TO GIVE YOU COMPLETE PRODUCT INFORMATION

... and a self-indexing filing system



Here's How It Works . . .

It all starts with the annual *eem*-Electronic Engineers Master. *eem* categorizes the electronic industry into 51 major product groups. Numerically they run from Section 1100 through 6000 and appear at the top of each *eem* catalog page. These same section numbers are used as the index for your personal filing system.

Monthly, you'll receive *CLIP/FILE*, the new product newspaper. Each *CLIP/FILE* new product item includes an *eem* file system number. You simply clip each release along the perforated line, and file it in its appropriate folder.

Each time you refer to *eem* and wish to check for additional information, merely look for the section number at the top of the *eem* page and select the corresponding file folder. There, at your fingertips, is the necessary data to bring you up-to-the-minute.

STANDARDIZED FILTERS

Standardized filters are ***pi*** type low pass filters. They are supplied with two terminals to be connected in series with a power line. This places an inductor in series with the line and a capacitor is internally connected from each terminal to the case. The filter case must be grounded for proper operation. The internal inductors and capacitors are especially designed for radio frequency filter operation to provide good filtering action over a wide frequency range.

CURRENT RATINGS

Filters are rated for continuous use at a maximum ambient temperature of 85°C (185°F). They are made to withstand occasional momentary surges for normal motor starting, etc. If you have an intermittent duty problem contact factory for a suitable rating.

VOLTAGE RATINGS

The filters are rated for continuous use at the specified voltage at temperatures up to 85°C (185°F). Filters with a dual votage rating (e.g. 400 VDC/150 VAC) are rated for the higher voltage only in direct current applications. The rating drops to the lower value for alternating current applications of any frequency up to 70 cycles per second. Any filter may be used at a lower voltage than its rating.

CASE SIZES

All filters are in deep drawn seamless cases. They are hermetically sealed with solder sealed covers. Dimensions shown for cases are basic sizes, but because of their deep drawn nature, dimensions will vary slightly depending upon the point of measurement.

Cases and brackets are steel, hot tin dipped finish. This is adequate for most uses, but if severe corrosion resistance is desired as for marine use, add the letters "CR" to end of part number. Then the unit will be made of non-ferrous metal with hot tin dipped finish and will cost slightly more than the steel units. Example 70 D 6.3 G W 11 CR

TERMINALS

Standard terminal types are shown. If two different terminals are desired on one filter, insert both terminal types in the part number — for example 70D6.3GW1121. For mounting styles S, V, Y the first terminal type listed in the part number will be supplied on the end near the mounting studs or flange.

INSERTION LOSS

The column marked ***db*** in the table of basic part numbers is the insertion loss at a frequency of 150 kilocycles. Insertion loss is a measure of the effectiveness of a filter at a particular frequency. The insertion loss is the logarithmically adjusted ratio of signal input to signal output measured in a standard circuit of 50 ohms input and output impedance. The larger the number of ***db***, the greater is the signal reducing ability of the filter.

The following table will help to illustrate the ratio between the interference voltage input to a filter and the output voltage as stated in ***db***.

db	***Voltage Input : Voltage Output***
0	1:1
6	2:1
20	10:1
40	100:1
60	1,000:1
80	10,000:1
100	100,000:1

All the ***db*** figures in the chart represent the insertion loss for each filter at 150 kilocycles. A complete description of insertion loss requires a graph or a tabular chart showing a number of ***db*** readings at frequencies spread throughout the useful range of the filter. The filters in this catalog have a useful range from below 150 kilocycles to above 250 megacycles. They have been designed to maintain approximately the stated level of insertion loss in the frequency range of 150 kilocycles to about 10 megacycles and then to follow a gently sloping reduction maintaining effective levels of insertion loss to between 250 and 400 megacycles. This corresponds to the normal frequency distribution of radio interference generated by most electrical machinery, electromechanical devices and a great deal of electronic equipment.

VOLTAGE DROP

All filters are designed to have a voltage drop of low value so that they will not interfere with proper operation at the equipment in which they are installed. The 70 volts D. C. series has a maximum drop of 0.3 volt when operated at full rated current. The 400 VDC/150 VAC and the 600 VDC/250 VAC have a drop of less than one percent of the AC rating when carrying full rated current.

WHY USE FILTERS?

Much electronic and electrical equipment produces interference which disrupts radio communication and seriously affects the safety and efficient operation of aircraft, marine, industrial and military communications. As a result, the Federal Communications Commission is enforcing statutes which require control of interference and interference sources. The various military branches of the Department of Defense are specifying interference free operation in much of the equipment they now purchase. Manufacturers of sensitive and complex electronic equipment find that often their devices do not function properly as a result of interference produced in parts of their own or nearby systems.

The answer to this is radio frequency interference control. This control can be accomplished by one or more of the following methods.

1. Redesign to use non-interfering type components instead of those which generate interference. Example—Replace commutator type universal cooling blower motor with interference free induction motor.
2. Provide effective shielding to prevent direct radiation. Example—Interference producing ignition system of a internal combustion engine shielded with complete metallic housings over spark plugs, cables and magneto.
3. Install radio interference filters in power lines to prevent interference signals from being conducted to distant areas on those power lines. Example—Filters installed in power lines to a direct current aircraft motor to prevent motor interference from being conducted to the radio installation.

Interference reduction and control is generally a judicious balance among these three methods. Usually no one method is completely effective. Once the equipment design is finalized, further interference reduction becomes a combination of shielding and filtering. They complement each other and in most cases neither shielding nor filtering is completely effective alone.

HOW TO USE FILTERS EFFECTIVELY

First one must learn to recognize the serious sources of radio frequency interference. Interference is generated wherever there is a spark or electrical discharge. Commutator type electric motors and generators, electric arc and fluorescent lamps, switches and relays, thyratron and other gaseous discharge tubes may all be sources of radio interference of which the manufacturer or user may not be aware. Electronic equipment which utilizes oscillating circuits may generate radio frequency signals to perform necessary functions. These signals become radio interference when they leave the confines of the circuits and equipment where they are needed and interfere with other radio frequency sensitive equipment. An example of this is the oscillator used in a superhetrodyne receiver. Among electronic generators those dealing with critically shaped waveforms such as saw tooth or square wave and pulse generators can cause a considerable amount of interference as a result of harmonics of the fundamental frequencies.

For best results, isolate the severe interference producing sources and prevent them from contaminating interference free equipment or lines nearby. This can be accomplished by shielding and enclosing case construction around the interference sources combined with filters in the power lines.

Filters will reduce the radio interference currents flowing in power lines to very low levels. This is essential to prevent unwanted signals from traveling great distances and radiating into space from these distant power lines. Filters are not a complete cure for all radio interference problems. They need the help of adequate shielding and isolation to be completely effective.

The physical placement of a filter is important. Improper positioning can sometimes nullify the effectiveness of a filter. The radio interference filter should be mounted close to a shielded source, or considering the whole chassis a source, close to the power line entrance. Input and output lines of the filter should be separated. For best results use mounting styles S, V or Y and project one terminal through a shielding partition or bulkhead in the chassis or wiring enclosure. Shielded lead style terminals can also help isolate input and output lines. Be sure that shielded leads have the outer covering grounded to chassis at both ends.

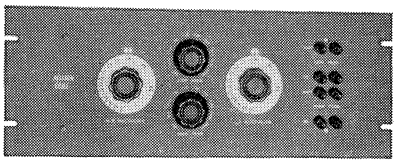
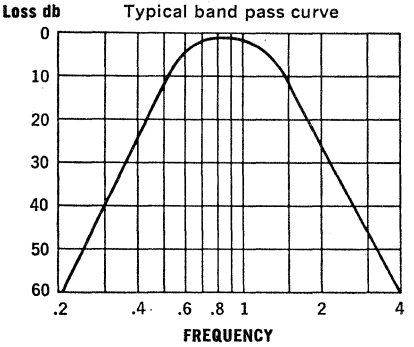
ALLISON VARIABLE FILTERS

Allison Filters fill the need for a general purpose tunable audio frequency filter for laboratory use. They may be used as low pass, high pass or band pass filters. When used as a low pass filter, they will pass all frequencies from DC to the cutoff frequency. Various types are available to tune over the full range from 15 cps to 600 kcps. These are passive network filters with a dynamic range in excess of 120 db. Under most operating conditions, the loss through the filter is 2 db or less. *Allison filters are excellent for the analysis of transients since they are quite free of ringing effects.*

SERIES 2 FILTER

Allison Series 2 Filters meet the ASA Specifications for octave band filters (Z24.10-1953). The controls consist of an independent range switch and multiplier dial for the low cutoff and the high cutoff frequencies. The multiplier dial tunes over a range of one octave. The range switch changes the cutoff in octave steps.





SPECIFICATIONS

Attenuation rate, 30 db per octave (45 db in first octave on 2C).
Passive network—no power supply.
No vacuum tubes.
Impedance (in and out), 600 ohms.
Minimum band width, 1/5 octave.
Maximum input for minimum distortion, 2 volts. Audio frequency type will handle ½ watt maximum; Model 2C, .1 watt maximum.

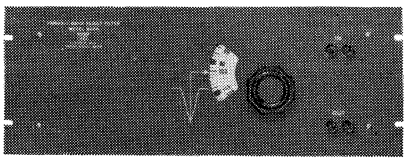
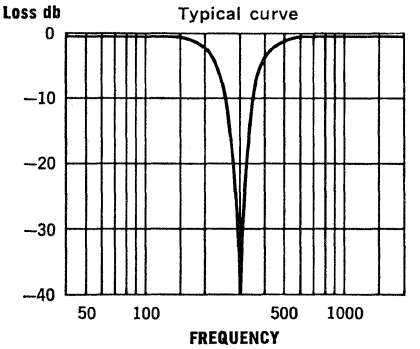
NEW BE6 FILTER

The Allison Model BE6 Band Elimination Filter is a new addition to the line this year. This filter is a passive network filter with a direct reading dial, tunable over full audio frequency range from 20 cps to 20,000 cps. It will transmit all frequencies from DC to more than 100 kcps, except for the reject band to which the filter is tuned. This filter may be used to eliminate the power line frequency in measuring circuits; to eliminate the fundamental in distortion measuring circuits; to eliminate the resonant peak response of the pickup in accelerometer or vibration pickup circuits. It may be used in series with other Allison filters to eliminate one frequency which is interfering.





SPECIFICATIONS

More than 40 db attenuation at one frequency.
Passive network—no power supply.
No vacuum tubes.
Impedance (in and out), 600 ohms.
Reject band less than 1 octave wide.
Loss in pass bands, ⅓ db.
Single dial control.
Direct reading frequency dial.
Maximum input for minimum distortion, 5 V.
Size of portable units, excluding knobs and handle, 17" long, 5¾" deep, 8" high.
Rack models are mounted on 7" rack panel.

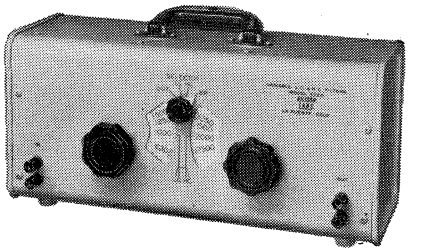
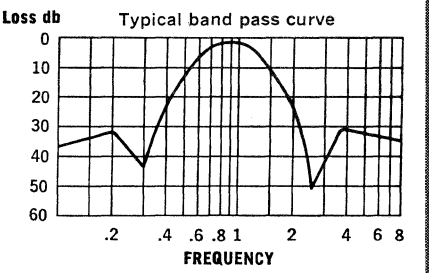
MODEL 420 FILTER

The 420 was the first Allison filter to have a direct reading dial. It has 1.3 inches of scale for each octave of frequency over the full range from 20 cps to 20,000 cps. The attenuation rate on this filter is 20 db or more per octave for the first octave with an attenuation outside the pass band which exceeds 25 db at all frequencies beyond an octave away from the cutoff frequency.

These filters are magnetically tuned over a range of an octave, after which a printed circuit switching arrangement changes the inductance and capacitance values, so that the same magnetic tuning assembly may tune over the next octave. This results in a very small blank space in the frequency range at each octave point on the dial.





SPECIFICATIONS

Continuously variable frequency range from 20 cps to 20,000 cps.
20 db attenuation in first octave.
Passive network—no power supply.
No vacuum tubes.
Dynamic range, 120 db.
Impedance (in and out), 600 ohms.
Plug-in input-output transformers for other impedances.
Maximum input for minimum distortion, 2 V.
Low loss, approximately 2 db in pass band.
Low pass signals from DC to cutoff frequency.
Minimum band width approximately ½ octave.
Size, excluding knobs and handle, 17" long, 5¾" deep, 8" high.

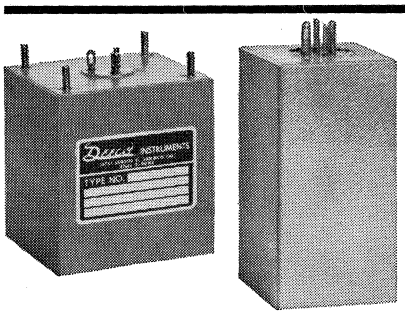
DEECO TELEMETERING

Deeco Telemetering Filters are the new constant delay type. A complete line is available from miniature size to standard JHU-APL sizes with impedances ranging from 50 ohms to 100,000 ohms. Constant delay band pass filters for airborne applications as well as ground stations are available. This means minimum distortion in the entire system. For optimum system performance the new Deeco constant delay band pass and low pass telemetering filters are a must.



ORDERING INFORMATION

Select the type number to give necessary attenuation from the chart. Specify the cutoff frequency and impedance desired.

Example: HP-1130-600 cycle 1000 ohms.

DEECO HIGH PASS FILTERS

Deeco high pass filters are available as standard items. Input and output impedances from 50 ohms to 10,000 ohms need only be specified. Insertion loss is less than .5 db with power levels to 20 mw. High stability, high Q toroidal coils are the only inductors used in Deeco filters. All cases are hermetically sealed and potted to withstand all mil spec requirements.

RYTRON TELEMETERING FILTERS

Comprehensive . . . At last a complete line of telemetering filters to meet your design needs, selected from our wide range of standard filters. Because of the use of high "Q" toroid coils as inductor elements, RYTRON'S telemetering filters have excellent characteristics of inductance stability with temperature and level. These filters function well at low levels since the inducted voltages in toroids from stray fields is very low.

Refer to the following RYTRON TELEMETERING FILTER TABLE for selection of the telemetering filter suited to your requirements. Reference to the RYTRON STANDARD CASES MIL-T-27A SPECIFICATIONS, Bulletin G-103, for the determination of the physical measurements of the filter cases will facilitate circuit planning. The centrally located header requires a 7/8 inch cut-out for mounting. All cases are potted and hermetically sealed.

This standardized group of filters covers most popular filter applications and frequencies. Units are in compact, drawn, magnetic shielding cases . . . 1 3/16 x 1 1/16 base, 1⅝ high for BMI, LMI, BML; others 2½ high. There are six basic types:

BMI band pass units are 10K input, output to grid, 2:1 gain. Attenuation is approximately 2 db at 3% from center frequency, then 40 db per octave.

HMI high pass units are 10K in and out. Attenuation is less than 6 db at cut-off frequency and 35 db at .67 cut-off frequency.

LMI low pass units are 10K in and out. Attenuation is less than 6 db at cut-off frequency and 35 db at 1.5 cut-off frequency.

HML high pass filters are same as HMI but 500/600 ohms in and out.

LML low pass filters are same as LMI but 500/600 ohms in and out.

BML band pass units are same as BMI but 500/600 ohms input, output to grid, 9:1 gain.

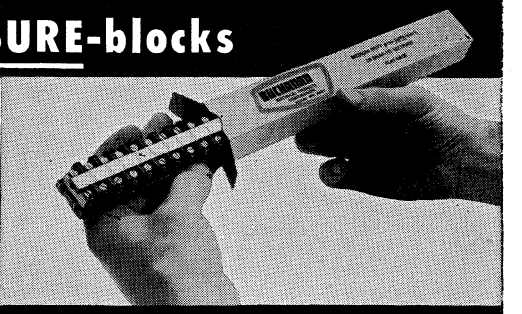
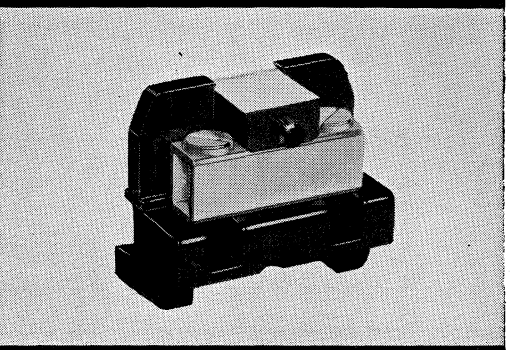
ELIMINATE DISADVANTAGES OF BARRIER-TYPE TERMINAL STRIPS with BUCHANAN MD pres-SURE-blocks



NO WASTE CIRCUITS—Make up blocks to any required number of circuits from compact, pre-assembled lengths of twenty snap-fit sections. Just pull off or add circuits as needed. Single snap-on end section completes block.

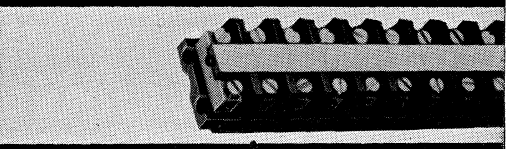
SIMPLIFY STOCK AND INVENTORY—No need to invest in and stock blocks or strips of various circuit lengths—make them up to exact lengths needed.



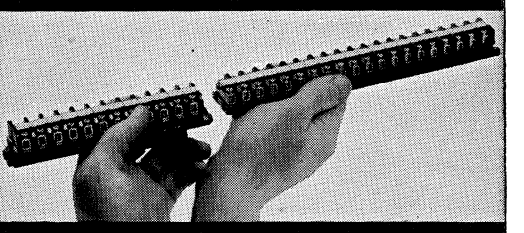
ELIMINATE TERMINALS—Just insert stripped wire or wires in tubular screw or tubular clamp contacts—no terminals or lugs to install, buy or stock.

SAVE SPACE—INCREASE NUMBER OF CIRCUITS IN AVAILABLE SPACE—20 circuits are only 9½ inches in length (each snap-fit unit is 1⅛" wide x 63/64" high).

- Greater total wire capacity per circuit—each tubular contact can handle from a single #22 up to any combination of wires equivalent to a #8. Conservatively rated at 750 volts.
- Three types of contacts (7/16" c-c) for stripped or terminal ended wires (can be combined in single block).



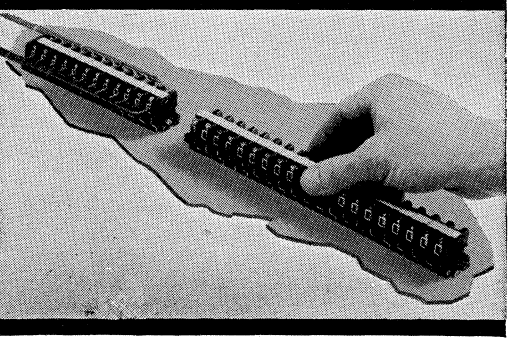
ELIMINATE "BLIND" MARKING AREAS—All identification markings, whether separable or integral, are *on the top* of the blocks, unobscured. Choice of integral painted, slip-in vinyl or stick-on pressure sensitive marking strips.



QUICKEST TO HANDLE—Just two parts to build any length block you need. No single pieces to handle.

EASIEST TO ASSEMBLE—Hand assembly without fastening hardware. Only two parts to handle—contact sections and end section.

- Use mounting screws only every 12 circuits.
- Channel mounting also available.



SIMPLEST TO LENGTHEN—No need to remove mounting screws or lose contact space. Save overall length by eliminating the lost space required for mounting ends of two or more blocks in line.

USE FEWER CIRCUITS—DECREASE JUMPERING—By grouping common wires in tubular contacts, an absolute minimum number of circuits is required.

Buchanan MD pres-SURE-blocks are also available with strap screw contacts for use with terminal-ended wires. Write for Bulletin EE59.

Prices and Quantity Discounts on application.

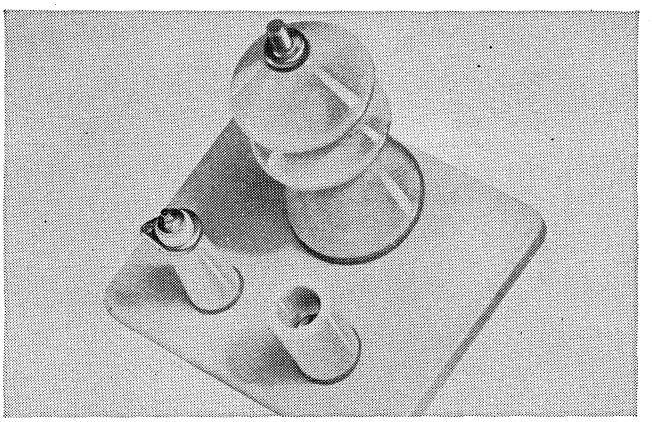
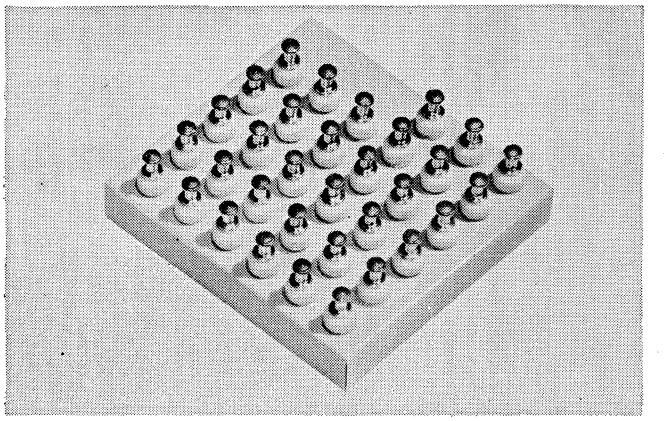
HERMETIC SEAL TERMINALS

TWIST-FREE PER MIL-T-27A SPECIFICATIONS

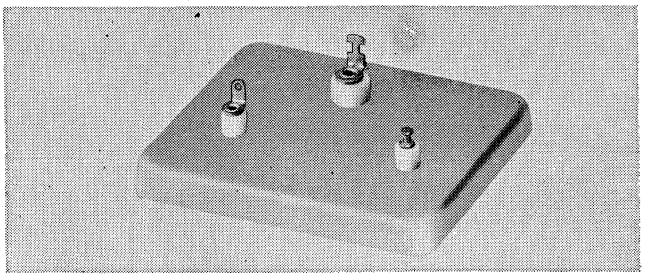
SPHERE terminals have been designed primarily for military applications but their simple design, which allows for superior quality in materials at realistic prices, makes them ideal for many commercial applications. Sealing is accomplished by a new and radically different method that is exclusive with ***SPHERE.*** We welcome your inquiries and also the opportunity of serving you whether your requirements are large or small.



HIGH VOLTAGE & CUSTOM TERMINALS: Terminals for normal applications; "Dual Conductor" types for filament windings and others with recessed insulators for HIGH ALTITUDE are available in a variety of sizes. Special emphasis has been placed on raising the Corona threshold through circulation of oil inside the terminal. "SPECIALS" or modifications of standard terminals are available through SPHERE'S design and model shop facilities. This includes OUR OWN ceramic department.

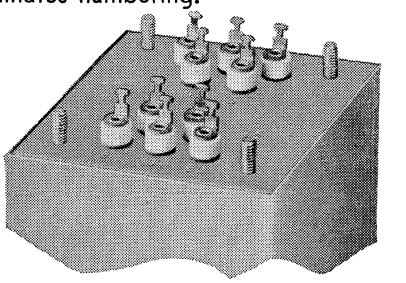


SUB-MINIATURE TERMINALS: Smallest compression seal terminals available to the electronics industry. NINE ON AN "AF" COVER! Eliminate separate soldering operation necessary with headers. Terminals can be located to your specifications or in one of the many standard patterns available at SPHERE. Outer insulators are available with a colored "TEFLON"* glaze, meeting MIL-T-27A color coding. This eliminates numbering.



TEFLON* TOP TERMINALS: NEW! NEW! NEW! SPHERE has just added this line of terminals to its ever-growing family of proven seals. The outer insulator is made of solid TEFLON* and the main sealing flange is formed on the underside of the mounting panel.

PACKAGE UNITS



Because we are not can manufacturers you can specify any source you wish for stock cans and ***SPHERE*** takes over from there. All modification and finishing can be done by the can manufacturer or ***SPHERE*** prior to the assembling of terminals. Our business is selling terminals and the delivery of complete package units to your satisfaction is a must with us.

BALLANTINE
ELECTRONIC VOLTMETERS

Ballantine Voltmeters are unique electronic instruments offering great sensitivity, wide frequency coverage and a high order of precision, and are designed for maximum compactness and convenience in operation. Alone or in combination with Ballantine accessories, they may be used to measure AC voltages from 20 microvolts to 28,000 volts, DC voltages from 10 microvolts to 100 volts and AC and DC currents from 0.1 microampere to 10 amperes.

Each Ballantine Voltmeter comprises a multi-stage amplifier, a signal rectifier and a specially designed moving coil indicating instrument whose deflection is proportional to the logarithm of the current through it. By using logarithmic scale meters the same accuracy is achieved *AT ANY POINT ON THE SCALE.* The accuracy of the usual linear meter is proportionally smaller for down scale readings. Negative feedback is employed to stabilize the voltmeter by counteracting the effect of changes in line voltage, tubes and other circuit parameters.

Modifications can be obtained in any of the standard instruments shown below to meet particular preferences in special scales, mountings, finishes, terminal arrangements, etc. We also invite inquiries concerning special custom instruments other than these in meeting your own particular requirements.

AUDIO to 250kc MODEL 300D

The Model 300D is a new instrument which combines some of the original designs of the Model 300 Voltmeter with greatly improved stability, reliability and extended life. It features a large, easy to read logarithmic mirror-scale indicating meter; high input impedance; freedom of disturbing effects of line voltage fluctuations of either long time or transient variety; small size and light weight.

Other features such as operating the tubes well below their normal ratings will assure long term accuracy and freedom from frequent calibration checks.

Special design emphasis was given to provide a voltmeter of such reliability as is usually found only in laboratory standards.

AUDIO to 150kc MODEL 300

The Model 300 is the forerunner and the most popular of all sensitive type AC voltmeters. This voltmeter has withstood the test of time, and in its present improved form offers reliability, ruggedness, precision, and low-cost. It has been adopted as the standard voltmeter for many standard tests.

SUB-AUDIO to 150kc MODEL 302C
Battery Operated

The fact that the Model 302C Voltmeter is powered by its own batteries makes it particularly useful in cases where no external AC power source is available or where it is not desirable to use such a source because of limitations imposed by even a small amount of residual 60 cps line frequency hum. The Model 302C is also particularly useful where measurements are to be made in ungrounded or symmetrical circuits.

While possessing unsurpassed voltage sensitivity for a battery-operated instrument, since it measures down to 100 microvolts, the Model 302C permits measurements to be made from 2 cps through 150 kc with high input impedance.

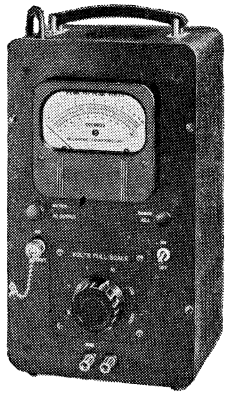
BALLANTINE
ELECTRONIC VOLTMETERS



PEAK-TO-PEAK MODEL 305

The Model 305 Voltmeter is designed to measure peak to peak values of repetitive waveforms. It responds to peak values of short periodic pulses having a repetition rate so low that it is impossible to measure their true peak values on ordinary electronic voltmeters. This voltmeter will measure peak-to-peak voltages from 1 millivolt to 1,000 volts (with an accuracy of better than 5%) for pulses from 3 to 250 microseconds having a repetition rate as low as 20 per second.

The Model 305 Voltmeter employs a resistance-capacity decade attenuator, a high gain negative feedback stabilized amplifier, a rectifier and a logarithmic indicating meter. Special circuits are used to respond to waveforms of very low energy content.

SPECIFICATIONS

Voltage Range ..... 1 mv — 1000 V peak-to-peak
Freqency Range ..... 10 cps — 100 kc (sine wave)
Pulse Width ..... 3 μsec — 250 μsec
Min Rep Rate ..... 20 pulses per sec
Accuracy ..... 5% for pulses and 3% for sine waves AT ANY POINT ON SCALE
Input Impedance ..... 2 meg shunted by 8 $\mu\mu$f*

AUDIO to 2mc MODEL 310A

The Model 310A provides greater sensitivity, a wider frequency range, a higher input impedance, but somewhat less accuracy than the Model 300. It fills an extremely broad variety of needs, such as high level acoustic measurements, low level vibration measurements, microphone and phonograph studies, audio amplifier tests, carrier telephone transmission, ultrasonic development, and AM broadcast band signal measurements. A device is provided for removing the zero suppression existing in the logarithmic meter of the Model 310A, thus allowing it to be used as an effective bridge null detector for signals down to 10 microvolts.

SPECIFICATIONS

Voltage Range ..... 100 μv — 100 v
Down to 40 μv at reduced accuracy
Frequency Range ..... 10 cps — 2 mc
As null detector 5 cps — 4 mc
Accuracy ..... 3% 15 cps — 1 mc and 5% elsewhere AT ANY POINT ON SCALE
Input Impedance ..... 2 meg shunted by 9 $\mu\mu$f*

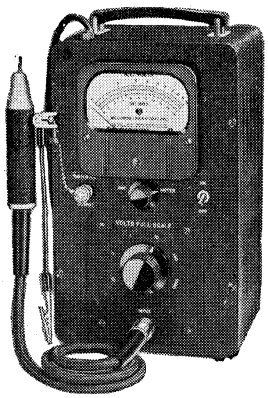
* Shunt capacitance, 19 $\mu\mu$f on two most sensitive ranges



AUDIO to 6mc MODEL 314

The Model 314 particularly fulfills the need for an accurate, compact, wide-range voltmeter of great sensitivity to facilitate the development and servicing of equipment in video applications, as well as in other fields such as r.f. heating, vibration, ultrasonics, piezo-electricity, etc. It is recommended for consideration as an attractive alternative to Models 300 and 310A whenever the latter are regarded as being limited with respect to frequency range, input impedance, and maximum voltage indication for the application being considered.

SPECIFICATIONS

INFRASONIC 0.05 cps to 30 kc, MODEL 316

The Model 316 satisfies the need for reliable voltage measuring apparatus in such applications as the development, design and routine testing of automatic control systems involving low frequency servo-mechanisms, and in many other fields where sub-audio frequencies down to 0.01 cycle are encountered. An example of its utility is in monitoring the outputs of a number of commercially available, low-frequency signal generators which are not furnished with an output meter.

This model is almost completely free of meter pointer "flutter" down to 0.05 cycle, while down to 0.01 cycle the variation will be small compared to the sweep occurring when using a dc voltmeter to observe the peak amplitude of infrasonic waves.

The Model 320 is a sensitive, general purpose, wide-range electronic instrument designed for voltage measurement in AC systems operating at power, audio and ultrasonic frequencies where it is essential to determine the true root-mean-square magnitudes of periodic complex waves or noise potentials. It accepts distorted waveforms with a crest factor from 5-15 depending on scale reading. It must not be confused with a wide variety of electronic voltmeters of either the average or peak responding types which although stated to read RMS voltage do so only when the waveform is sinusoidal.

Operation is not dependent on thermocouples or other thermally sensitive devices and thus this model is not subject to drawbacks as accidental burnout, sluggish response, insensitiveness, low input impedance and susceptibility to fluctuations of ambient temperature.

The Model 420 provides an accurate and a most convenient means for calibrating voltmeters, oscillographs, and other voltage sensitive devices, in the laboratory, and also in the shop and in the field where its ruggedness and simplicity of operation is found very advantageous. The Model 420 is an exceptional instrument having built-in stable signal sources of DC and distortion free AC together with a continuously variable precision attenuator system. It is ideal as a secondary standard.

DECADE AMPLIFIER MODEL 220B

For increasing the Sensitivity of any AC Voltmeter by 10 or 100 times

The Model 220B Decade Amplifier provides stabilized voltage amplifications of precisely 10 or 100, either of which may be selected by a panel-mounted switch. It is powered by self-contained readily available commercial batteries having a life of at least 150 hours with normal use. A meter is provided on the panel for testing the condition of the batteries.

An important application of this instrument and the Model 300 Voltmeter is in low level noise measurements, such as in the test methods of specification JAN-R-11. The amplifier may be used within the limits of its frequency response of 10 to 150,000 cps with other Ballantine Voltmeters or for other applications when stable voltage gains of 10 or 100 are desired.

DIRECT READING CAPACITANCE METER MODEL 520

This instrument represents one of the fastest and most convenient means available for measuring capacitance with good accuracy over an extremely wide range of values, such as those encountered in paper, plastic, mica, ceramic, and air-dielectric type capacitors. Furthermore, the principle of operation permits its use in the measurement of direct capacitance occurring in three-terminal systems. This property, together with the ability to register capacitance down to one one-hundredth of a micromicrofarad, renders the Model 520 of particular usefulness in segregating stray effects from the measurement of very low value capacitors having appreciable lead-to-ground capacitance. Capacitance is read directly on a large 5-inch mirrored scale meter which also features two adjustable indexes for "go-no-go" testing.

SPECIFICATIONS

Capacitance Range ..... 0.01 $\mu\mu$f to 12 μf

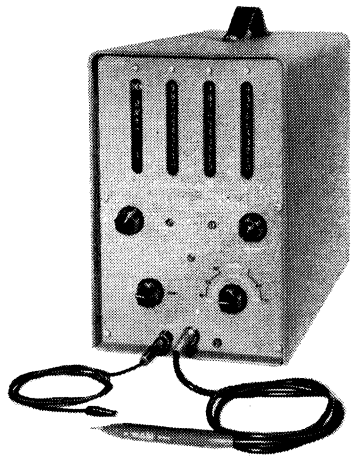
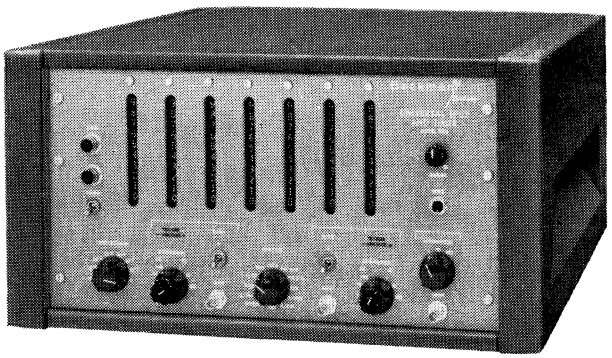
Digital Test and Control Equipment

ELECTRONIC COUNTERS
FREQUENCY METERS
TIME INTERVAL METERS
DC & AC VOLTMETERS
COUNTER-CONTROLLERS
INDICATORS & PRINTERS
DATA CONVERTERS



This digital volt-ohm meter is typical of portable Berkeley instruments. Equipment described as "portable" below is mounted in a similar cabinet.



This 10MC EPUT meter and timer is typical of standard Berkeley test and control equipment. Unless otherwise noted, instruments described below are mounted in a similar cabinet approximately 20" wide, 10" high and 16" deep. With cabinet removed, all such instruments fit easily into a 19-inch relay rack.

EPUT® METERS

Long considered standard equipment for making rapid precise frequency measurements, Berkeley EPUT meters are now available with over twenty standard modifications designed for an ever-broadening variety of applications. Four basic models (one a portable) offer top counting speeds of 100Kc, 1Mc and 10Mc. Most EPUT meters are equipped to make period measurements of low frequency signals.

TIME INTERVAL METERS

These instruments measure the interval between applied electrical signals by counting cycles of a highly stable internal oscillator. The full line offers meters of four degrees of precision ranging from a tenth of a milli-second to a tenth of a micro-second. Instruments feature selectable sensitivity for noise discrimination, trigger level adjustable over a wide range, slope selection and very high input impedance.

UNIVERSAL EPUT AND TIMERS

Combining the functions of an EPUT meter and time interval meter in a compact economical package, these instruments are widely preferred as general purpose laboratory equipment for precise frequency and time measurement. Universal instruments feature as many as ten distinct operating functions. Top counting speeds range from 100Kc to 10Mc; timing units from 0.1 micro-second to one second. A 100Kc portable model is available.

PRESET COUNTER-CONTROLLERS

Counters which deliver output signals when selected numbers are reached are widely used for precise control of diverse operations. Output signals may be relay closures, sharp voltage pulses or changes in dc level.

7400 Series controllers deliver output signals at one or two preset totals and will automatically reset to zero after last output signal if desired. Operated at a maximum speed of 10Kc, preset points are variable in increments of one count; at 100Kc, in increments of 10 counts, and at 1Mc in increments of 100 counts.

5800 Series controllers utilize miniature magnetic amplifiers for maximum reliability in industrial control applications. Operable at speeds up to 500 counts per second, these units are obtainable with from 1 to 12 preset points. Units with 1 or 2 preset points are mounted in a special dust tight cabinet 11" high 8" wide and 8" deep.

PRESET EPUT METERS

These instruments will create direct digital indication of rotating speed, flow, pressure, temperature and similar physical quantities in any desired units—for example, rpm, gals/sec, psi, etc. Direct indication is made possible by a counting interval variable over a wide range in small increments.

DIGITAL FREQUENCY MEASUREMENT UP TO 12,000Mc

Model 7570 Series heterodyne converters extend frequency measuring range of 10Mc EPUT meters with increased accuracy and sensitivity. Equipped with from one to three converters, all simultaneously housed in the same cabinet, the range can be extended to 110Mc, to 220Mc or to 1000Mc. Sensitivity of one milliwatt or better insures that loading effects will not distort measurements of weak signals.

Digital presentations of frequencies up to 12,000Mc can be obtained with the Model 7580 computing transfer oscillator operated with a universal EPUT and timer. Built-in computer calculates harmonic number which, preset into counter, creates a decimal display of actual frequency under test. Because manual calculations are unnecessary, measurements are ordinarily performed in one-fifth the time previously required.

DIGITAL VOLT-OHM METER

Model 5350 is an all-electronic portable instrument designed to measure dc voltage, ac voltage and resistance. Digital indication is complete with decimal point and polarity sign to eliminate human error. Full scale dc voltage ranges are 1v, 10v, 100v and 1000v with 0.2% accuracy. AC ranges are 1v, 10v, 100v and 500v rms; resistance ranges, 10k, 100k, 1M and 10M. Built-in dc voltage, ac voltage and resistance standards permit calibration without auxiliary equipment.

READOUT DEVICES, DATA CONVERTERS

Nearly all Beckman electronic counters generate a binary-coded output representing the measurement indication. Available at a convenient rear-panel jack, these signals will drive Beckman **digital recorders, remote in-line indicators, output scanners** and **various data converters.** All readout devices and converters are specifically designed for simple, reliable operation with basic counting equipment.

TRANSDUCERS

Beckman manufactures a variety of transducers which translate physical events into electrical pulse suitable for counting and timing purposes. Tachometer pick-ups and photoelectric sensing elements are typical.

Long battery life and freedom from power line connection make it an extremely versatile instrument for general laboratory use. Battery operation expands the usefulness of this meter. For example, making current measurements in high voltage circuits.

The inherent simplicity and unfailing accuracy of Frahm Resonant Reed Frequency Meters have gained wide acceptance for them in many fields.

The James G. Biddle Company introduced the first vibrating reed instruments in this country over 40 years ago. Throughout these many years our ability and our facilities, for producing only the highest quality instruments, have steadily improved. Our many years of experience, study of materials, processes, and controls, are your assurance of satisfactory performance over long periods of service.

Frahm Frequency Meters are available in switchboard, miniature and portable types in a wide variety of ranges for frequencies from 10 to 1500 cps or even to 1700 cps for special applications. Specially designed instruments can be made to your specifications. We invite your correspondence regarding applications which require special modifications of range, methods of actuating, scale graduations or other design characteristics. FRAHM RELAYS AND OSCILLATOR CONTROLS

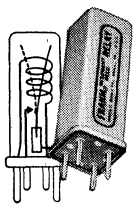
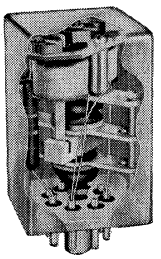
—for selective calling, remote operation, supervisory control, data transmission, telemetering, and monitoring.



The transmission of a number of control signals over a single communication circuit of any type is simplified by the use of these components.

REED RELAYS act like bandpass filters with narrow response bandwidth which operate on SPST contact—available with any one single nominal response frequency for each reed in them within the range from 20 to 1000 cps.

FRAHM ROC RESONANT REED OSCILLATOR CONTROLS are circuit components for electric oscillators—they maintain oscillator output frequency within close limits—also used as electro-mechanical bandpass filters.



Applications include: electrical and acoustical measurements, electrical communication systems (selective calling), remote operation and supervisory control of machinery and apparatus, electrical computers and telemetering systems, electro-mechanical bandpass filters.

Frahm ROC Oscillator Controls are available with any one nominal control frequency between 20 and 1100 cps—constant within ±0.15% of the nominal control frequency.

We particularly encourage inquiries on special applications.

New TRANSITORIZED CONTROLLERS

Curtiss-Wright Indicating Controllers provide inexpensive yet accurate indication and control of temperature and other variables that can be expressed in voltage, current, or power. They are "on-off" type controllers and basically consist of a moving coil, cross-coil, or dynamometer movement which is inductively coupled to a no-contact type circuit which in turn controls a relay.

Controllers with one or two independent control set-points provide simple on-off control, off-low-high, or left and right contacts with a center dead zone. They can be used as inexpensive warning devices as well as for accurate temperature control of plastics molding presses, annealing furnaces, drying ovens, chemical baths, etc.

RANGES	SENSING ELEMENT	MOVEMENT
30 to 1,200°F Fe-Const. 30 to 2,000°F CrAl-Al 30 to 3,000°F Pt-PtRh	Thermo-couple	D'Arsonval Moving Coil

PRECISION MICA CARD RESISTORS The secret of the outstanding accuracy and excellent stability of ESI bridges and other instruments lies in our precision resistors. Each resistor is carefully built and precisely adjusted in our own plant to assure the maximum control of quality. They are unifilar wound on mica cards to minimize both series inductance and shunt capacitance. The resistance wire used is a modern alloy having unusual stability, extremely low temperature coefficient over a wide range of temperature and negligible thermal emf to copper.

The bridge can be used by the manufacturers of iron core components for testing filter chokes, high Q coils, and iron core audio and supersonic frequency components. Due to its very wide inductance range the instrument can be used as a general purpose laboratory inductance bridge.

SPECIFICATIONS

Inductance: 1 Millihenry to 1000 Henry.
Frequency: The bridge is calibrated and adjusted at both 60 and 1000 cycles but can be used at any frequency up to 10,000 cycles.

DESCRIPTION

Functionally the instrument consists of a high gain linear amplifier with a 30 db. input attenuator in addition to the variable gain control. WIDE BAND AND CARRIER FREQUENCY DISTORTION METER TYPE 1410

USES

The Type 1410 Distortion Meter may be used in the laboratory or for production testing of Wide Band Amplifiers, Carrier Frequency, Telemetering and Ultra-Sonic equipment.

DESCRIPTION

The high sensitivity of the instrument permits measurements to be made on signals as low as 0.2 volts to an accuracy of 0.1%. Signals as high as 1000 volts may be applied to the input terminals directly. The frequency range of the instrument is 20 kc to 1 mc. in 10 overlapping ranges. Frequencies up to 3 mc. are passed without attenuation by the amplifier circuits, so that distortion measurements can be made on fundamental frequencies up to 1 mc.
An isolation transformer and line filter provided with the instrument prevent any feedback through the power line.

SPECIFICATIONS

Frequency Range: 20 kc to 1 mc.
Input Impedance: 500,000 ohms shunted by 70 mmfd. (plus capacity of input cable) in all ranges but the 0.1 volt range. The shunt capacity on this range is 800 mmfd.
Accuracy: Harmonic Distortion can be measured accurately to 0.1%.
Sensitivity: Distortion levels of 0.1% can be read accurately for a signal input as low as 0.2 volts. Maximum input signal is 1000 volts rms.
Elimination Characteristics: Eliminates fundamental completely while attenuating second harmonic approximately 3%. **Power Supply:** 105-125 volts, 50-60 cycles. **Dimensions:** 19¾" x 16¾" x 15¾". **Net Weight:** 60 pounds.

DECADE CAPACITORS

The Freed series of Decade Capacitors covers a wide range of values and can be supplied as individual decades from 0.0001 mfd. per step to 1 mfd. per step or in various combinations of assembled decade boxes.

Single decade units can be assembled in different capacitor values for use in experimental and permanent equipment. The decade boxes are useful for laboratory work in bridge measurements and as components of filters and tuned circuits.

Polystyrene dielectric is used in the manufacture of the capacitor assemblies with the exception of the 1 mfd. per step unit which uses Mylar as a dielectric. All capacitors are non-inductively wound and heat treated for stability, low dielectric absorption and low losses.

Each decade is variable from 0 to 10 by use of 11 position selector switch. The losses in the switches and mountings are kept low by the use of special low loss, impregnated switch wafers. A positive detent mechanism allows the switch to be set accurately.

SPECIFICATIONS

Accuracy: Individual capacitors are adjusted to an accuracy of ±1% when measured at 1kc. The capacitance at the terminals, less the zero capacitance, is within ±1% of indicated dial setting. The zero capacitance of the decade boxes is supplied with each unit. Single decade units have a zero terminal capacity of approximately 8 mmfd. except Type 1419, which is compensated for true terminal capacity.

Dissipation Factor: The dissipation factor of the polystyrene units when measured at 1kc is less than 0.0002, the 1mfd. per step decade (Mylar) is less than 0.005.

Maximum Voltage: The maximum voltage that may be applied to these decades is 500 DC working volts.

Note: Individual capacitors can be supplied to better than ±1% Tolerance. Write for complete information.

3000 SERIES ELECTRONIC COUNTERS

The 3000 series counters are constructed from modular subunits.
This versatile construction permits the selection of a counter with exactly the characteristics needed for virtually any counting or control application. The choice of several input circuits allow the use of practically any kind of a transducer or wave shape to actuate the counter. Any count capacity can be obtained by cascading individual unit decades. Several different recycling arrangements can be chosen as well as different pulse outputs and relay configurations. Batch counting can be included with any recycling arrangement.

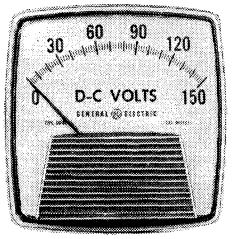
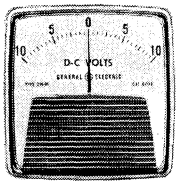
GENERAL ELECTRIC INSTRUMENTS



Type DO-91, 3½-inch size



Type DW-91, 2½-inch size

Panel Instruments

General Electric general-purpose panel instruments are particularly suitable for use in radio and communication equipment where accuracy and quality are required and space is at a premium. Featuring distinctive appearance, excellent readability, and reliable operation, the instruments are available in both 2½- and 3½-inch sizes and in a-c and d-c ratings. These instruments find wide usage where minimum frontal dimensions and minimum depth behind the panel are essential requirements. The accuracy of all these instruments is ±2 per cent of full-scale. Voltmeters, ammeters, milliammeters and microammeters are available in most required ranges.

Features

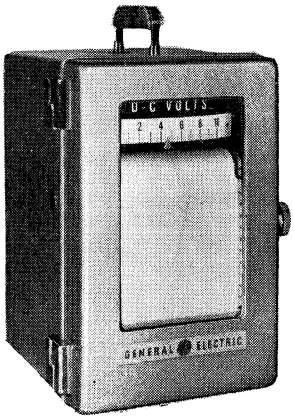
Built-in General Electric quality helps provide extra-long, trouble-free life with these outstanding features:

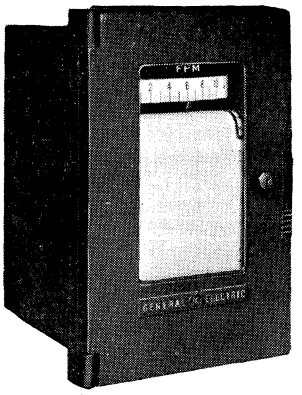
Shielded Mechanisms—Self-shielding of all d-c movements allows mounting on magnetic or nonmagnetic panels without special calibration-cluster mounting bezel-to-bezel without interaction—and the effects of stray magnetic fields are minimized.

Completely Sealed—Internal parts and movements are protected from dirt, dust, and water. Cases are sealed with neoprene gaskets in air-conditioned assembly areas.

Pivots and Jewels—Moving parts are supported on rugged steel pivots which rotate in low-friction, highly polished glass jewels.

Write for Bulletin GEA-66-78





General-purpose Strip-chart Recorders

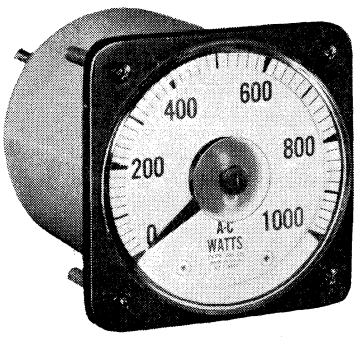
A line of general-purpose strip-chart recorders, designated Type CH are available in either portable or switchboard cases for a-c or d-c service. Among the exclusive features of these instruments is a writing mechanism featuring a throwaway inkwell. This innovation eliminates the common problems of spilled ink, cleaning, and refilling recorder inkwells. Ink for these recorders is supplied in a sealed, clear-plastic inkwell which, after use, is simply thrown away. Other features of these recorders for general industrial applications include accuracy of 1 per cent of full scale, 150-ft record rolls to make chart changing less frequent, an optional spring-clock chart drive which lasts for 60 days without rewinding, 0.7-second response time, weatherproof cases, and up to 28 different chart speeds from ¼ in. per hour to 2 in. per second.

Record roll used with these recorders has several interesting features. The time lines are printed in light-green ink to provide the maximum amount of contrast with the standard red recording ink. Six in. wide, these 150-ft charts give maximum readability and superior qualities for blueprinting.

These general-purpose strip-chart recorders are available as a-c voltmeters, ammeters, wattmeters, varmeters, and frequency meters; and as d-c ammeters, millivoltmeters, and voltmeters. Also available is a self-contained d-c amplifier for ranges as low as 0.1 millivolt, d-c.

Write for Bulletin GEC-1319

Long-scale Switchboard Instruments



Oblique front view of instrument showing the clearly visible, open scale

Combining advantages of a long-scale and shadowproof cover, these instruments are designed for general switchboard service where accuracy and maximum legibility are essential. Long-scale switchboard instruments are provided as voltmeters, ammeters, wattmeters, frequency meters, power factor meters, varmeters, synchroscopes, and temperature meters. Other applications include those where it is desirable to read small changes in the measured quantity—such as speed indication.

Features

Available in Types AB-18, 4¼ inches square, and AB-16, 8¾ inches square, their compact design affords maximum usage of available mounting space. Legible markings, bold tapered pointer, and scale lengths of 7.1 inches (AB-18) and 14.2 inches (AB-16) are all co-ordinated for maximum readability. The pointer tip is in the same plane as the scale markings, eliminating parallax errors.

Instruments are magnetically damped, allowing quick readings and insuring permanency of characteristics. All moving systems have a through shaft to insure mechanical stability. Self-contained resistors simplify wiring transformer-rated instruments. Equipped with bearings which provide maximum protection to both jewels and pivots under all normal and many adverse conditions. All instruments are thoroughly shielded. Cases are dust-tight and moisture-resistant, for semiflush mounting, and they are constructed of a steel shell, with Textolite* base and die-cast cover. Instruments can be readily disassembled for inspection or repair. Accuracy is ±1% of full scale value.

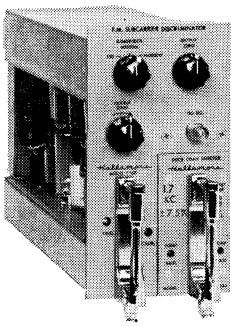
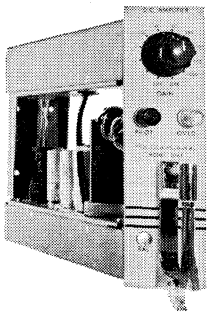
HALLAMORE "BUILDING-BLOCK" INSTRUMENTATION SERIES

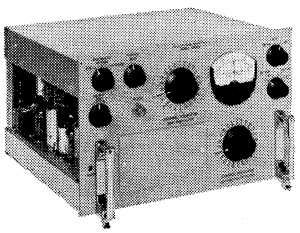
The need for economy, time and space savings, and elimination of operator error has brought about the development of the Hallamore building-block series of system components. Plug-in configuration permits simple adaptation to existing systems . . . extreme versatility in newly developed systems. Modification or repair in the field becomes a simple replacement operation, within the capabilities of relatively unskilled operators. Application of the most recent advances in the state-of-the-art provide high dependability and outstanding new levels of performance.



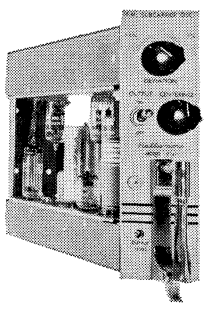
PHASE LOCK DISCRIMINATOR (HEC-0162A), a modular design, includes three discriminators and a metering assembly (HEC-0176). Module case (HEC-0145) is 8-3/4″ high, 19″ wide, 18-1/2″ deep. Each discriminator requires one channel selector (HEC-0168), available for all IRIG channels, I through E, and one regulated power supply (HEC-0144). Module accepts signals at levels of 10 millivolts to 20 volts and converts frequency intelligence to an analog output voltage, flat within 0.5 db over the IRIG specified bandwidths.



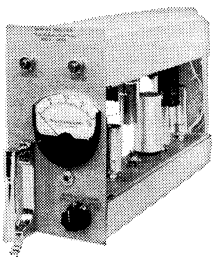
DC AMPLIFIER (HEC-0142A) is a low-drift, chopper stabilized amplifier, featuring wideband response. The front panel switch has 12 positions: off, on, and 10 accurate gain steps (from 1 - 1000) with overlapping Vernier potentiometer. It is suitable for signal conditioning in instrumentation systems, operational use in analog computer systems, or any application requiring amplification of a DC or AC signal up to 40 kc. Eight units fit module case (HEC-0145) for mounting on a 19″ standard relay rack.



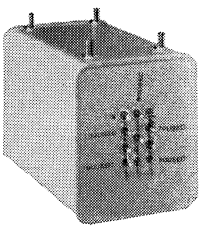
BAND-SWITCHED PHASE-LOCK DISCRIMINATOR (HEC-0169A), a modular design, houses all input filters, output filters, switching circuitry, and tape speed compensation networks, in addition to the basic discriminator, in a panel space of 7-3/4″ by 12″. It covers all IRIG channels, and a single control provides complete switching to each channel. Its flexibility affords outstanding advantages in missile checkout, quick-look analysis of recorded data, and laboratory development work.



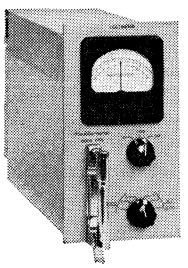
FM SUBCARRIER OSCILLATOR (HEC-0161) accepts analog voltages nominally 0 to ±2.5V and provides an output frequency modulated by the incoming signal. The nominal center frequency for a given unit is selected by means of a plug-in oscillator channel selector (HEC-0164), available for all IRIG channels, I through E. As many as six units may be mounted in a standard (HEC-0145) module case together with a summing amplifier (HEC-0166).



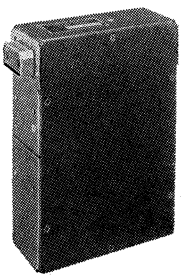
SUMMING AMPLIFIER (HEC-0166B) accepts up to 18 subcarrier oscillator outputs for recording a composite signal on a single magnetic tape channel. Each unit includes a timing oscillator capable of generating timing signals on 50 kc or 100 kc for tape speed compensation. The summing amplifier is normally powered by power supply (HEC-0143A).



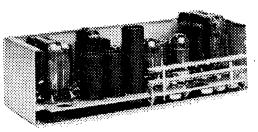
SUBCARRIER DELAY UNIT (HEC-0197) provides the requisite time delay for the composite set of subcarrier channels (I through E) when using the Hallamore reference discriminator (HEC-0170) to generate compensation signals. The delay unit measures 3-3/8″ by 3-15/16″ by 4-1/4″ and is normally mounted behind the patch panel.



METER ASSEMBLY (HEC-0176) is intended for common metering of the outputs and test points of three (HEC-0162) discriminators. A meter switch is provided for selecting 10 volt and 100 volt scale positions. A switch is provided for selecting the desired discriminator output or test point.



POWER SUPPLY (HEC-0143A) provides the requisite power for Hallamore instrumentation series components in all cases where the common supply (HEC-0144) cannot be economically utilized and/or where it is desired to maintain dc isolation between circuits. The individual supply provides all filament power, +250vdc, −250 vdc, and a bias voltage of −480 vdc.



REGULATED POWER SUPPLY (HEC-0144) is mounted internal to module case (HEC-0145) and is capable of supplying any combination of the Hallamore "building-block" series components, including up to eight DC amplifiers or six FM subcarrier oscillators. This supply provides all filament power, +250 vdc, −250 vdc and a bias voltage of −480 vdc. Regulation is 0.1%, ripple 10 millivolts or less.

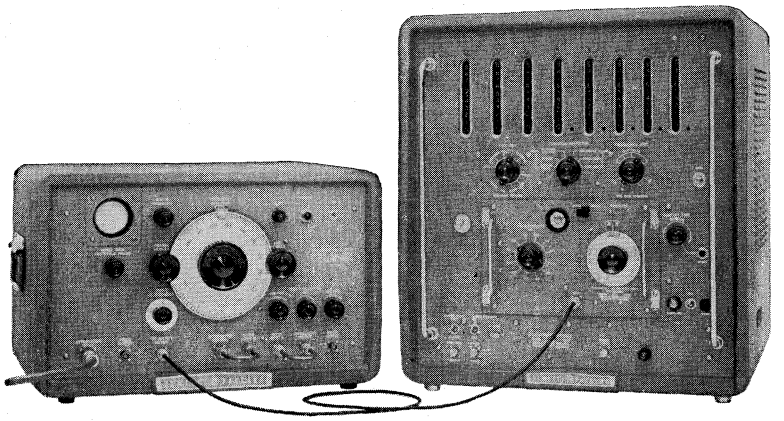
540A/540B Transfer Oscillator



Measure frequency to 12.4 KMC quickly, easily, with electronic counter accuracy. Avoid guesswork, end "trial and error," eliminate expensive setups. Measure on pulsed, AM, FM, CW and noisy circuits.

Just two -hp- instruments—Model 540B Transfer Oscillator and a 524 series electronic counter, (with plug-ins) are all the equipment you need to measure unknown frequencies up to 12.4 KMC swiftly and accurately.

This simple, two instrument setup is particularly useful for quick CW and AM frequency measurement, FM center frequency and deviation checks, and frequency of high-noise signals. Frequencies of pulsed signals can be measured using an external oscilloscope. Overall accuracy is better than 10 times that of the best microwave wavemeters; and on clean CW signals, is about 1/1,000,000.

Simple operation

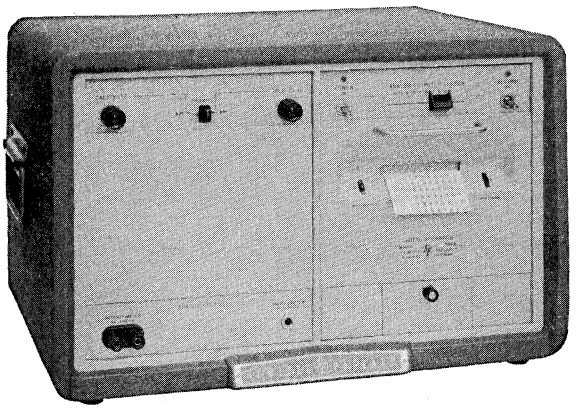
When approximate frequency is known, the 540B is tuned until a harmonic beats with the unknown. The multiplying factor is noted, and the 540B frequency measured on the 524. The 524 reading, times the multiplying factor, is the unknown.

Brief Specifications, 540B

Oscillator Freq. Range: 100 to 220 MC
Harmonic Freq. Range: Up to 12.4 KMC
Stability: Better than 0.002%/minute
Output: 2 volts into 50 ohms
Amplifier Gain: 40 db max, 1 v output
Oscilloscope: 100 cps to 200 KC; vert. sens. 5 mv rms/inch
Price: $750.00△.

Model 540A, similar to 540B, but requires an external mixer above 5 KMC. $615.00△.

560A/561A/B Digital Recorder



Continuous digital record for counters
Direct reading, simple hookup
Five 11-digit lines/second
Analog output for recorder
Accuracy identical to counter used

No intermediate equipment is needed between *-hp-* 560A and an *-hp-* counter equipped with digital recorder kit. In direct hookup, completely self-contained *-hp-* 560A provides a complete record of all types of test data, plus, through an analog output, a convenient graphic record of very small data variations.

The analog output is a voltage or current proportional to the number represented by any 3 consecutive digits of recorded data. The 560A permits expanded strip chart recording and the chart cannot be driven off scale since range variation for the 3-digit scale is 0 to 999. Wider variation merely causes a repetition of the 0 to 999 sequence. Print capacity is five, 11-digit lines/second; secondary or coding data may be entered simultaneously with primary data.

-hp- 561A Digital Recorder offers 10-line coded decimal entry with separate connection for each position of each wheel so that the instrument may be operated from relays, stepping switches and beam switching tubes.

-hp- 561B Digital Recorder similar to *-hp-* 561A, for use with *-hp-* 405A Digital Voltmeter and *-hp-* frequency counters with single-line presentation.

Brief Specifications

Accuracy: Identical to counter used

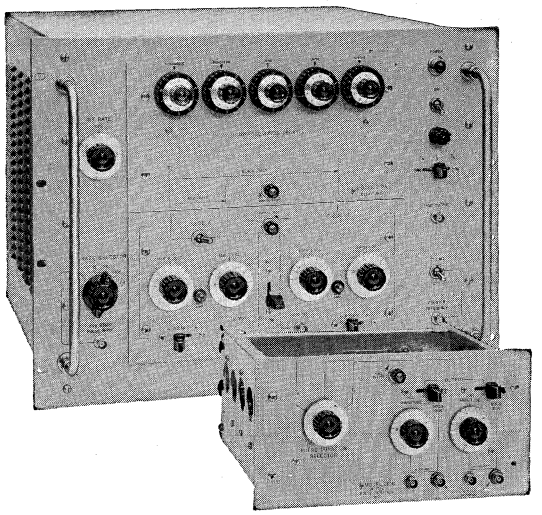
NEW! hp 218AR Digital Delay Generator



Independently adjustable time intervals or pulse delays
±0.1 μsec time interval accuracy
Crystal oscillator time base
Regulated power supplies

Model 218AR Digital Delay Generator is a totally new instrument applicable to many types of timing measurements including calibrating the range determining circuits of radar receivers, etc. The generator is built to rigid standards and is suitable for military use. It provides two precision time intervals or pulse delays, either of which are independently adjustable from 1 to 10,000 microseconds in 1 microsecond steps. These time intervals are accurate to within 0.1 microsecond ±0.001% of the selected value, and may be initiated from an internal multivibrator, 10 cps to 10 KC, or from an external rate generator, 0 cps to 10 KC. Total jitter does not exceed 0.02 microseconds in either case. The instrument also provides a 50 volt synchronizing output pulse at the beginning or end of a time interval, and a 1 microsecond timing comb output at the front panel.

hp 219A Dual Trigger Unit

This plug-in drawer for *-hp-* 218AR supplies trigger pulses of positive polarity, 50 volts, 0.1 μsec rise time from a 50 ohm source. Pulse A occurs at T_0 or T_1 as selected by a switch; Pulse B is triggered at T_2. *-hp-* 219A, $100.00.

hp 219B Dual Pulse Unit

This plug-in drawer for *-hp-* 218AR produces two high-power pulses which are continuously adjustable in width, 0.2 to 5 μsec and in amplitude from 0 to 50 volts, positive or negative polarity. The leading edge of these pulses can be set to occur at the beginning or end of the selected time interval. Both pulses are brought out to separate front panel jacks but may be switched to a common jack with no change in level or output impedance. *-hp-* 219B, $450.00.

hp 219C Digital Pulse Duration Unit

This plug-in drawer for *-hp-* 218AR produces a high power output pulse whose delay and duration are digitally controlled. The pulse is available in both polarities simultaneously, and is continually adjustable in amplitude up to 18 volts from a 90 ohm source. It may also be obtained from a directly coupled 500 ohm source with an amplitude of 100 volts. *-hp-* 219C, $350.00.

No count ambiguity

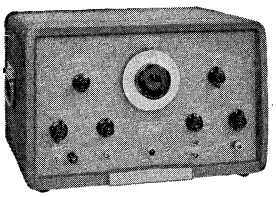
A unique feature of the new *-hp-* 218AR is its time base, a pulsed crystal controlled oscillator. The oscillator starts at T_0 and stops at the last output pulse. This eliminates the "plus-or-minus-1-count" ambiguity of many counter circuits in such application.

Model 218AR is a completely self-contained instrument, requiring only one or more *-hp-* 219 series plug-ins to perform a broad variety of time and delay generation measurements. Simplicity and flexibility are increased by the large variety of output signals provided by the plug-in units. The instrument is particularly compact and well-designed; etched circuits and the use of plug-ins materially increase circuit accessibility.

The instrument's power supplies are fully regulated to avoid effects of line voltage variations. It is available as *-hp-* 218AR, rack mount. $2,000.00.

hp Square Wave and Pulse Generators

hp 212A Pulse Generator



Provides continuously variable, high power "fast pulses" of superior wave form. Combines broad general usefulness with 0.02 μsec rise and decay time to meet requirements of radar, TV and nuclear work. Pulse length variable 0.07 to 10 μsec; minimum overshoot; 50 watt peak power (50 v to 50 ohms load). Low impedance means accurate pulses can be delivered at a distance from the instrument. Repetition rate variable 50 to 5,000 pps; controlled internally or externally. Synchronizing pulse available in advance of, or following output pulse. $585.00 (cabinet), $570.00 (rack mount).

hp 211A Square Wave Generator

Versatile, wide range instrument for testing oscilloscopes, networks, video and audio amplifier performance, modulating signal generators and measuring time constants. Offers simple control of electronic switches; is also convenient for indicating phase shift, frequency response, transient effects. Two separate outputs (a) 7 volt 75 ohm circuit for TV work; (b) 55 volt 600 ohm output for high level work. Both have full amplitude variation. Instrument operates free-running or externally synchronized with positive going pulse or sine wave of 5 volts minimum amplitude. $300.00.

HICKOK Meters

For Accuracy and Dependability

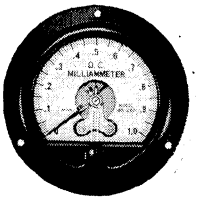
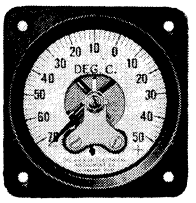
3½" ROUND-250 DEGREE METER

All DC meters can be supplied with accuracy either 1% or 2% of full scale deflection. The AC meters, which use copper-oxide rectifier-type movements, have accuracy within 5% of full scale deflection under all conditions. These instruments are as accurate as panel mounting instruments of equal size and have the advantage of two and one-half times longer scale. They are damped in accordance with American Standards Association Specifications, and their response time is also in accordance with these specifications. Allows readings to be taken quickly and more accurately.



2½" 250 DEGREE AIRCRAFT METER

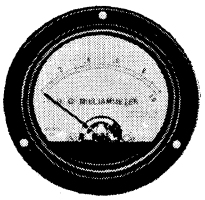
This instrument is mounted in a regulation aircraft case per Army-Navy specification, including the shielding and dimensional requirements. Has scale approximately 4⅜" long. Quick readability makes them desirable as flight instruments. Aircraft-type dial is available. Mechanism specially designed for aircraft service and will meet vibration-resistant requirements, etc.



RUGGEDIZED PANEL METERS

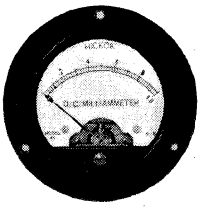
2½", 3½" or 4½"

The high Hickok standard of quality is now available in a ruggedized DC or rectifier type AC meter. This instrument provides the practical answer to requirements for shock proof meters with dependable accuracy. This highly efficient shock mount design permits pointer and scale divisions to be easily read when meter is under vibration. Exceptionally thick flint hard glass withstands pressure and shock tests designated by military specifications. Designed for flush mounting. Luminous dials can be supplied. Furnished in sealed case.



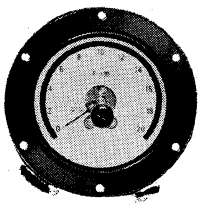
3½" ROUND FLUSH MOUNTINGS

Accurate within 1½%. Large opening symmetrically designed admits a maximum of light to the dial. Thick flange eliminates danger of breakage and improves appearance. Metal dials with white background are supplied in all standard ranges. Special dial designs are supplied on quantity orders, at no extra charge. Internal illumination can be furnished.

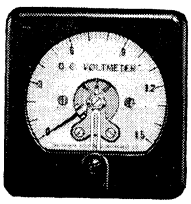


4½" 250-DEGREE RUGGEDIZED METER

DC Model: 48-250R. AC Model: 49-250R (Rectifier type). Accuracy: 2% as standard and available to 1%. For flush mounting. These long scale 250-degree arc angle instruments are now available as shock proof ruggedized and sealed. Permits a scale length approx. 2½ times as long as conventional instruments in the same size case. Use of these meters offers possibility of considerable saving to panel space. Available in 3½" and 4½" sizes.

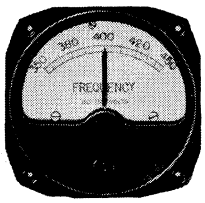


3½" SQUARE 250 DEGREE METER SAME AS THE ROUND 250 DEGREE METER



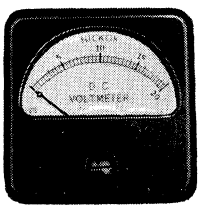
All DC meters can be supplied with accuracy either 1% or 2% of full scale deflection. The AC meters, which use copper-oxide rectifier-type movements, have accuracy within 5% of full scale deflection under all conditions. These instruments are as accurate as panel mounting instruments of equal size and have the advantage of two and one-half times longer scale. They are damped in accordance with American Standards Association Specifications, and their response time is also in accordance with these specifications. Allows readings to be taken quickly and more accurately.

DIRECT READING FREQUENCY METER, AIRCRAFT TYPE



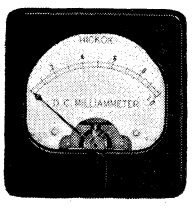
These Hickok improved self-contained frequency meters can be mounted in aircraft type cases of the large AN size. These are the smallest size frequency meters. This type of case is often convenient where space is a limiting factor. Suitable for aircraft use. Movement is shockproof. Case is dust and waterproof in accordance with Army-Navy aircraft instrument specifications. Radium or fluorescent dials and pointers available.

2½" MINIATURE SQUARE PANEL MOUNTING



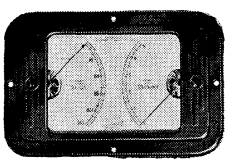
Flush mounting, phenolic case, wide flange only; and metal cases, wide and narrow flanges. Accurate within 1½%. These miniature panel mounting instruments are of the standardized 2½" size, but have extra long scale lengths by reason of the wide angle of deflection and longer scale radius. Five types of cases are available. Lance type pointers regularly supplied, however, small spade pointers can be furnished.

3½" SQUARE FLUSH MOUNTINGS



Accurate within 1½%. Large opening, symmetrically designed, admit maximum light to the dial. Thick flange eliminates danger of breakage and improves appearance. Require less panel space than round flush instruments. Metal dials with white background are supplied in all standard ranges. Special dial designs supplied on quantity orders at no extra charge. Internal illumination obtainable by means of bulb inserted in a socket through the instrument base.

SPACE SAVING DOUBLE-MOVEMENT METER



Model 76DC, Model 77 AC, Accuracy 1½%. 4" x 6" flush mounting phenolic case. Black finish standard. DC scale length is 2⅝". AC scale length 2¼". The vibrating reed frequency meters illustrated are widely used where constant or known frequency is important to efficient operation of equipment. The features include:

• **Permanently Accurate**—These instruments remain within ±0.3% at reference temperature unless otherwise stated. This accuracy is not affected by poor wave form, external magnetic disturbances, or voltage fluctuations.

• **Size and Type for Every Service** — They are made in a wide variety of portable and panel case styles, reed groupings, and frequency ranges from 12 to 1000 cycles and above. Standard voltage is 100—130 unless specified. Three sizes of sealed instruments and various combinations of elapsed time and frequency meters are described on the next page.

• **Rugged Construction** — This simplified patented design has no moving parts to wear out or get out of calibration. Ideal for field and mobile communications.

• **Suitability for Electronic Circuits**—Because of relatively low power consumption and reeds with high Q, and sharp immediate response, J-B-T meters have wide acceptance in the electronics field.

RUGGEDIZED METERS

Models with "RUG" — Sealed vibrating reed frequency meters and sealed elapsed time meters can be supplied, on special order, to the intent of MIL-M-10304A which covers ruggedization of other kinds of meters. This feature usually is specified only for extra severe shock and vibration.

3½" AND 2½" SEALED TYPES

3½" FHXX Meters sealed, glass-to-metal construction with solder terminals, meet or exceed the sealing and electrical requirements of JAN-I-6 and MIL-M-6A including the 3000 volt breakdown, and use the front mounting dimensions specified. Each one is tested in water under vacuum simulating 57,000 feet altitude for one minute. These meters supersede the former FHX sealed meters. A neoprene gasket is included for mounting between the case and the panel.

The new 2½" sealed meters Model 21-FHXX (60 cycles) and Model 23-FHXX (400 cycles) have the dimensions shown in line 3 of the table above. While not regularly stocked, the meters are in volume production.

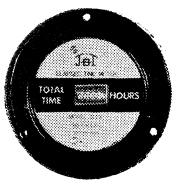
1½" SEALED TYPES

Model 15-FHAC, illustrated on preceding page, contains two reeds for low-voltage cathode-follower circuit and meets intent of Military Specifications on sealed meters. This model is widely used on audio-oscillators to standardize output.

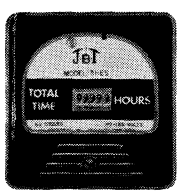
Model 15-FH Series (not illustrated) — These use the same case as the 15-FHAC, sealed, but offer five reeds in Models 15-FH-54, 15-FH-56, and 15-FH-400, with electrical characteristics and dimensions as shown in the tables.

ELAPSED (OR RUNNING) TIME METERS

60 Cycles — 0-9,999.9 Hours



J-B-T engineers recommend AC elapsed time meters for superior accuracy, especially where voltage or ambient temperatures vary widely. These self-starting synchronous instruments record operating time of AC electrical and electronic equipment by registering in 1/10th hour steps to 9,999.9 hours, then automatically re-set. Tenths are shown in red numerals, units in black. Case is black molded matching FX 3½" round frequency meters, and fully encloses all parts. Applications include tube life, TV equipment, punch presses, conveyors, oil burners, maintenance schedules, etc. The Model 31-EX for 60 cycles, 110-125 volts, is the most widely used. Model 31-EX-200 for 60 cycles, 230 volts, is available but not regularly stocked.



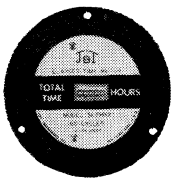
The black molded square case 3" x 3" is the major difference between the Model 31-ES illustrated here and the 31-EX shown above. Four molded-in studs on standard 2¼" distances between centers provide mounting from rear of panel; meter barrel is 2¾" diameter. For complete details see Print SK-84. Variations including 99,999 hours, 230 volts, matte finish, 50 cycles, or readings in minutes are quoted on request.

60 Cycles — Tenths of Minutes

For short-run applications or reading at closer intervals than model 31-EX, the Model 31-EXM is available in 0-9,999.9 Minutes, 60 cycles, 110-125 volts. Tenths of minutes are in red, minutes in black numerals; uses 31-EX case.

3½" Sealed — 60 Cycles

Where rugged requirements make a completely sealed elapsed time meter desirable, the Model 31-EHXX with glass-to-metal construction, flat glass front, neoprene mounting gasket, heavy-duty terminals and 3½" diameter separable flange often is specified. The meter registers in 1/10th hr. steps to 9,999.9 hours, then automatically re-sets. It is normally supplied for 60 cycles, 110-125 volts. Tenths are in red, units in black. Overall dimensions and appearance match the FHXX series of sealed frequency meters, per line 8 of Table of Dimensions. Maximum voltage between terminals and case is 1000 volts R. M. S. Every instrument is checked in vacuum chamber. Use print SK-85 for mounting.

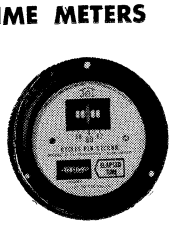


2½" Sealed — 60 Cycles

Ask for print SK-68 on the 21-EHXX, which is a 2½" sealed meter and meets the mounting dimensions of Type MR 26 of MIL-M-6A. The counter is the same size as the 31-EHXX, and other characteristics are similar. Glass-to-metal seal makes the instrument completely tamper proof. Standard characteristics are 60 cycles, 110-125 volts, 0-9,999.9 hours, with automatic re-set. Inquiries on quantity orders of 400-cycle 2½" sealed elapsed time meters also are invited.

FREQUENCY — TIME METERS

One meter does the work of two in the combination reed type frequency-elapsed time meter.



Model 31-FE (illustrated), pioneered by J-B-T, saves panel space and cost, and encourages scheduled maintenance. 3¼" flange metal case, with dimensions per line 6 of above Table, 5 reeds, 58-62 cycles, 100-130 volts, 0-9,999.9 hours is standard. 3½" flange metal case, 5 reeds, 31-FEX-1 per line 7, is supplied on custom order; 7, 9 and 11 reeds, or 50 cycle range, also are available.

OTHER REED PRODUCTS

Based upon 18 years of manufacturing experience in vibrating reed meters, J-B-T now produces and invites inquiries upon:

1. **TACHOMETERS** — Reading rpm by resonance alone—without any electrical circuitry or complicated mechanical connections — these instruments are held or mounted against the housing of turbines, electric shavers, vacuum cleaners, sewing machines, etc. Request Bulletin MT-458.

2. **RELAYS** — Reed-relays for selective frequency calling, or single-reed types for response to a single transmitted signal, such as 100 to 500 cycles, are made in plug-in cans. One type, a unique J-B-T construction with patent pending, eliminates vibrating contacts and substitutes a mechanism with exceptional efficiency which often eliminates need for further amplification. The device also can be added as a frequency-limit control on an indicating reed meter.

3. **OSCILLATOR CONTROLS**—Plug-in reed-type oscillator controls to match transmitted frequencies to those picked up by vibrating reed relays can be supplied, for example, to operate in mobile or other comunications equipment.

3½" Sealed — 400 Cycles

Meeting the long-felt need for a stable 400-cycle elapsed time meter compact enough to fit in a 3½" flange case, with all parts enclosed, is the 400-cycle Model 33-EHXX, normally supplied for 0-9,999.9 hours, 110-125 volts. Sealed construction, glass-to-metal with separable flange, neoprene mounting gasket, heavy-duty solder terminals and flat glass front cause external appearance to match the FHXX series and 60-cycle Model 31-EHXX. A slightly larger case is used per drawing SK-61.

MORE J-B-T PRODUCTS

Besides the reed tachometer, reed relays and oscillator controls described above, J-B-T also manufactures:

- **Vibrating Reed Frequency Meters** — several portable cases, also 4" and 6" panel types for telephone or aircraft applications.
- **Temperature Indicators** of the thermocouple pyrometer and resistance thermometer types.
- **Appliance Temperature Testers** for checking oven temperatures, iron testing, refrigeration servicing, etc.
- **Indicating Laboratory Galvanometers.**
- **Accessories,** such as thermocouples, resistance bulbs, protection tubes, switch mounting plates and switch knobs.

Please request Catalog 558-B which describes most of these products.

VSWR METERS

MicroMatch is the registered trade name which identifies a complete line of M. C. Jones Electronics Co., Inc. RF Power and VSWR measuring instruments.

These instruments contain a patented circuit designed to produce an output essentially independent of frequency. They cover the frequency range of 0.5 to 4000 mcs. and power levels of 10 milliwatts to 120 kilowatts.

The RF Power and VSWR instruments are rugged field and laboratory type complete measuring equipment.

The DC and RF output coupler units only are sold principally to manufacturers who incorporate these units directly into transmitters. Over 3,000 models of couplers are available for your "Special" requirement.

Because they are made in quantity to the highest government and commercial standards, MICROMATCH instruments combine the highest quality with extremely low cost.

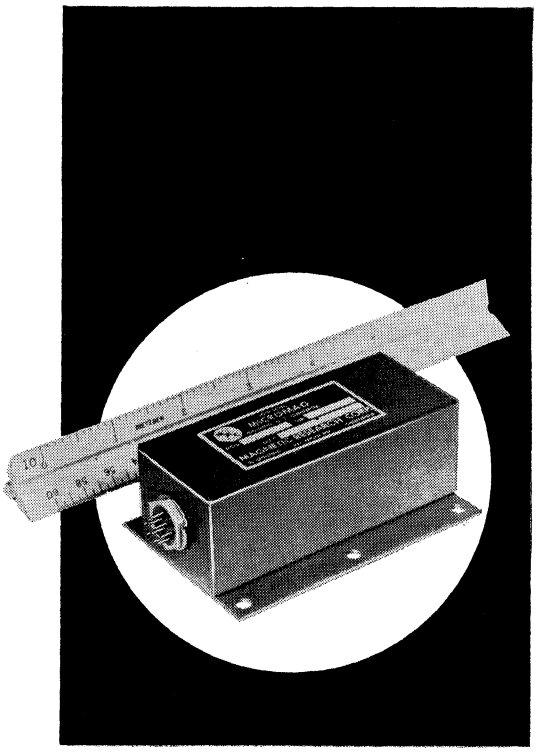
Pacing the industry in Astro-Magnetics



The MICROMAG is ideally suited for temperature and strain measurements in industrial, military, and medical applications. It is used where utmost reliability and stable performance, under most unfavorable conditions, must be maintained. It serves equally well as a very stable DC voltage amplifier for radio telemeter systems, or as a high gain DC power amplifier for relay type temperature and servo control systems.

The MICROMAG is drift free for all practical purposes and has an exceedingly high gain stability. No moving parts or fragile elements are used. Instead, it uses reliable transformer type magnetic elements which can withstand extreme vibration and high environmental temperatures. Due to these outstanding features, the MICROMAG has fast become a trusted instrument amplifier for aircraft, target, and missile instrumentation.

MICROMAG amplifiers are carefully manufactured. Expert quality control is maintained during assembly. Each unit is individually temperature compensated. Exhaustive environmental tests have proven that the MICROMAG is a unique magnetic amplifier which continuously exceeds its performance specifications.

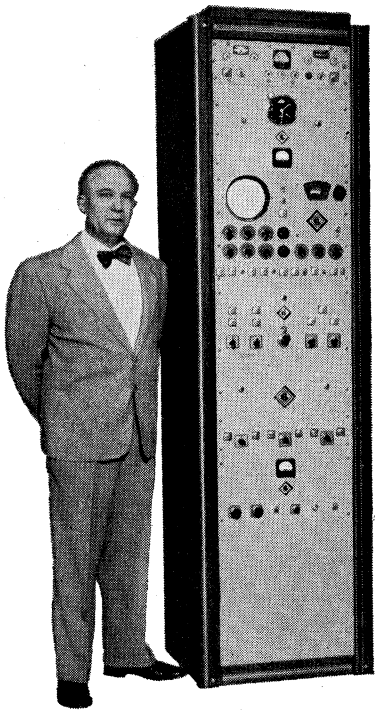
MODEL 111 FREQUENCY-TIME STANDARD

Space Satellite Timer



After over a year's extensive testing and comparison with other units the SMITHSONIAN INSTITUTION selected the unit pictured above for their satellite tracking stations located around the earth. It was established that this unit will keep time within 1/10,000 second per day. We guarantee a stability of 1 x 10^{-9} and supply a continuous record to prove this. DON'T BUY ANY FREQUENCY STANDARD CLAIMING THIS STABILITY UNLESS THE SUPPLIER PROVIDES A *CONTINUOUS* RECORD TO PROVE IT. DO NOT ACCEPT ASSERTIONS OR EVEN "PLOTTED CURVES."

GENERAL SPECIFICATIONS

We can supply units on special order that are stable within 5 x 10^{-10}. Two units in stock now.

MICRO CLOCK

Reads time to 0.001 second. Micro-clock is provided with a cam system that can be synchronized with WWV time signal ticks and used as a time signal repeater. Can be used to study and measure outside phenomena.

OSCILLOSCOPE

Circular sweeps of 100 cps, 1 kc, and 10 kc time received pulses within a few micro-seconds. Separate inputs to study outside phenomena.

The Model 110 Frequency-Time Standard was originally designed for the U.S. Air Force Eclipse Expedition of 1954. Units were stationed around the world for timing the total solar eclipse that year. Since then the units have been on several other "around the world trips," and they are still operating. The construction is rugged and meets Mil specs. in all major respects. The stability of the original Model 110 units has been improved so that it is the same as for Model 111. But it has not got all the features of the Model 111 assembly.

RESEARCH • DEVELOPMENT • PRODUCTION

Proved performers in plants, laboratories and military installations, Panoramic's broad range spectrum analyzers, unparalleled sweep generator systems, highly reliable frequency calibrators and associated instruments accelerate completion of research and development projects and quickly clear production test bottlenecks. Panoramic instruments offer visual and often direct reading analyses. Operation is simple and reliable. Interpretation easy. Design and construction are of the finest following best commercial standards but using MIL specifications as a guide. Each instrument is subject to careful calibration, rigorous testing and exhaustive quality control checks. Product improvement is continuous. Panoramic's highly skilled engineering staff constantly endeavors to develop new instruments for application and to extend uses of existing equipment.
For 20 years, Panoramic has been the pioneer and leader in the field of panoramic instruments.

PANORAMIC BROAD BAND SPECTRUM ANALYZERS—0.5 CPS-25 MC

These compact easily operated Panoramic Spectrum Analyzers are repetitively scanning heterodyne receivers which automatically measure the frequency and amplitude of input signal components. A graphic readout is provided along calibrated X and Y axes of either a CRT or inked paper chart (or both) as illustrated below.

The instruments conveniently handle both discrete and noise type signals. Uses include vibration and noise analysis; general Fourier analyses; cross-modulation measurements; monitoring transmissions for bandwidth, spurious modulation, parasitics and interference; geophysical investigations; medical studies and a host of other applications. Use of accessory equipments listed in the chart on next page considerably broadens the application areas.

All of the analyzers are designed for maximum versatility, flexibility and reliability. Virtually any spectrum analysis requirement (within the frequency ranges covered) can be satisfied by the wide variety of technical characteristics offered. The frequency ranges of the several models are broad and overlap each other considerably.

In order to facilitate analysis of widely diverse phenomena, most analyzers feature adjustable IF bandwidth to adjust frequency resolution (selectivity). For example the Model LF-2a which covers a portion of the audio spectrum, offers a frequency resolving capability of 0.1-20 cps while the Model LP-1a has an inherent resolving capability between 10 cps and approximately 1 kc for the entire audio region. The former model would be selected when it is necessary to analyze components or energy distributions with extremely close spacings in frequency.

Most models have scanning ranges of selectable widths to allow either a quick overall look at the spectrum or highly resolved analysis of smaller, magnified spectrum segments. The degree of frequency resolution obtainable for a given sweep width depends upon sweep rate. A wide variety of sweep rates are available not only for resolution versatility but also to handle different types of information e.g., discrete and random.

Calibrated controls are incorporated which select the center frequency and width of the spectrum segment to be examined. No VFO or tuning head is needed in these instruments thus precluding ambiguous calibrations and minimizing spurious responses.

High sensitivity, extensive dynamic range and low residual distortion are characteristic. High input impedance permits direct use of most transducers. As an aid to selecting equipments for your needs, the technical characteristics of the models are charted side by side on the next page. SPECIAL PURPOSE ANALYSIS INSTRUMENTS

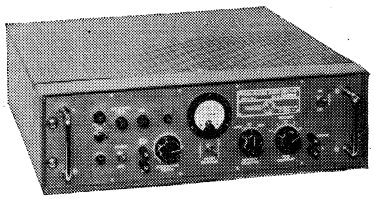
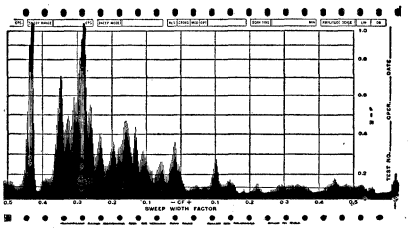
Analysis of Complex Vibration Waveforms, Transients, Noise

Panoramic POWER SPECTRAL DENSITY ANALYZER — Model PDA-1





Integrated power density readout of impact waveform derived from magnetic tape loop.

PDA-1 is a companion analog computer to several Panoramic Spectrum Analyzers for use in analysis of random waveforms. Applications are in such fields as vibration and noise studies, medical electronics, and geophysics.

PDA-1 has 4 Operating Modes:

1. Peak squared voltage vs. frequency
2. Average squared voltage vs. frequency (adjustable time constant)
3. Integrated squared voltage vs. frequency—external triggering of integrator discharge
4. Integrated squared voltage vs. frequency—internal triggering of integrator discharge (0.7-30 sec. integration interval).

The plots of power spectral density are formed on a 12" x 4½" inked chart. Sweep rate, sampling filter (IF) bandwidth, and frequency excursion are all adjusted on the companion analyzer to insure proper intercept of the data within each spectrum segment.

When information is derived from a continuous loop of magnetic tape, PDA-1 is normally set for externally triggered integrator operation. A pulse derived from the splice controls discharge of the integrator. The analyzer is then adjusted to sweep one incremental filter bandwidth per loop interval.

Therefore Total Analysis Time =

$$\frac{\text{Sweep Width}}{\text{IF Bandwidth}} \times \text{Loop Time}$$

SUMMARY OF SPECIFICATIONS

Frequency Range and Filter Bandwidth:
Same as companion Panoramic Spectrum Analyzer. See data on Models LF-2a, LP-1a (linear scan only) SB-7bZ and SB-15. Other models are available for higher ranges.
Model RC-3a, Panoramic Recorder and Sawtooth Wave Generator must be used with PDA-1 except when a Model LF-2a is available. LF-2a has internal recorder.

Readout Calibrations:

$$\frac{(\text{Volts})^2 \text{ Seconds}}{\text{Cps (IF) bandwidth}} \text{ vs. frequency}$$

Continuous average and instantaneous outputs:

$$\frac{(\text{Volts})^2}{\text{Cps (IF) bandwidth}} \text{ vs. frequency}$$

Scan Intervals: 1, 2, 4, 8, 16 minutes
(See also RC-3a) 1, 2, 4, 8, 16 hours

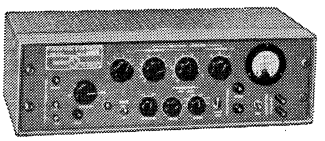
Integration interval: 0.7-30 seconds with internal synchronization. Interval limited by integrator overload with external synchronization. Integrator level monitored by panel meter.

Averaging Time Constant: Adjustable, 10 seconds max. Greater time constants available on special order.

Dimensions:
19" x 5¼" rack mount panel
19" cabinet depth

Power Requirements:
115 v (nominal), 60 cps, single phase. Provision for other power lines supplied on special order. Power line regulator supplied with equipment.

Panoramic SYNCHRONOUS FREQUENCY ANALYZER — Model SF-2



Uses: Critical vibration analysis of rotating and reciprocating devices, dynamic balance analysis, resonance determinations. The Model SF-2 automatically plots the amplitude of the vibration at the rotational speed of rotating devices. As the speed of the device under test changes, the Model SF-2 automatically tracks the resulting change in frequency of the vibration. This results in an **automatic** two-dimensional plot of vibration amplitude versus frequency (as related to rotational speed) on the CRT screen of the associated Spectrum Analyzer (Model LP-1a). Model SF-2 may be adjusted to track multiples or submultiples as well as fundamental components. A reference (tachometer) output determines the frequency continuously monitored for amplitude by the SF-2. The LP-1a 5" CRT indicator is used. Several speed ranges from 20-150 cps to 20-1500 cps are calibrated along the horizontal axis. Decibel and linear amplitude calibrations are provided.

Typically, an accelerometer or other transducer mounted on the machine under test provides the signal input with SF-2 operation. An SF-2 control sets the analysis to frequencies equal to the instantaneous speed or at multiples of speed from 1.0 to 5.0 in increments of 1% of speed. Monitoring is also selectable at ½ or ⅓ speed and other submultiples.

As a particular frequency ratio is chosen, the frequency calibration is automatically changed to encompass the same basic speed range. E.g., the 20-300 cps fundamental calibration becomes 20 cps-600 cps during second harmonic analysis.

Rejection of signal input frequencies other than the selected component is effected by the narrow IF in the LP-1a (available with IF bandwidth adjustable from 10 to 1000 cps).

SUMMARY OF SPECIFICATIONS

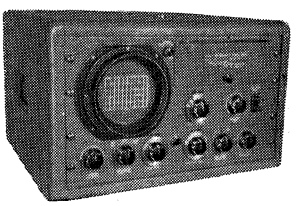
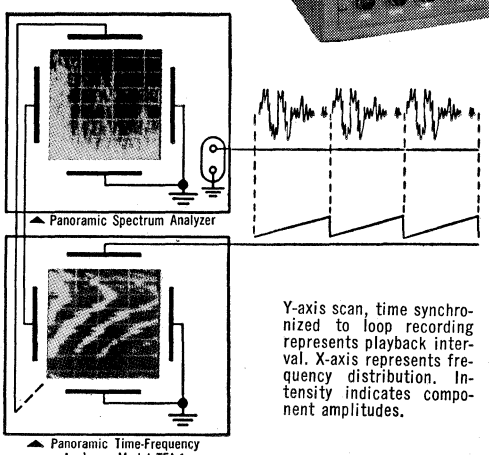
Panoramic TIME-FREQUENCY ANALYZER— Model TFA-1





▲ Panoramic Spectrum Analyzer

Y-axis scan, time synchronized to loop recording represents playback interval. X-axis represents frequency distribution. Intensity indicates component amplitudes.

▲ Panoramic Time-Frequency Analyzer, Model TFA-1

Designed to perform as a companion instrument to any one of the Panoramic Spectrum Analyzers (from Subsonic through Microwave) as well as the TMI-1a, Panoramic Telemetering Indicator, the TFA-1 provides a complete history of the time occurrence of transient waveform components, in addition to frequency and amplitude information.

Data to be analyzed may be derived either from continuous loop recordings or any other source of repetitive blocks of information, having a playback time of a fraction of a second to 60 seconds.

To concentrate the companion amplitude vs. frequency analysis on a fraction of the data, a variable time gate is available upon request. The gate blanks the indicator except during a selected section of the time scan interval. The section scan feature is valuable for study of interesting regions found by the overall TFA-1 presentation.

Presentations of frequency vs. time vs. amplitude are on a long persistence CRT with provisions for photography. Frequency range is governed by analyzer used.

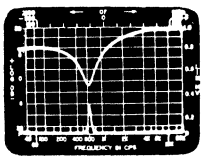
With high persistence indicators, alternate displays can be viewed simultaneously thus permitting a very high degree of readability of small differences in frequency and/or amplitude.

The SW-1 is used with Panoramic Analyzers and the several Panoramic sweep frequency generating instruments (Models LP-1a, AP-1, SB-7bZ, SB-15, SG-1, G-2, G-3a, G-15, PA-1, SPA-3, G-6, TW-1).

The SW-1 also forms a part of Panoramic's Response Tracing System (see block diagram, page 730).



Marker pip injected alternately onto selected response indicator by means of Model SW-1 Signal Alternator and external signal generator. Precision of frequency determinations is greatly improved by this comparison method.

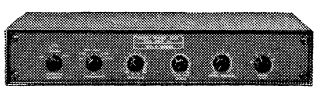
Panoramic MULTI-BANDWIDTH CRYSTAL FILTER — Model CF-1

An accessory to the Model LP-1a, Panoramic Sonic Spectrum Analyzer, the CF-1 provides 7 stable well defined IF filter bandwidths. The CF-1 facilitates quantitative power spectral density analyses and noise spectral studies because of the known shape and gain of the filter. Rectangular "flat topped" bandpass characteristics are used except for the 1 and 2 cps filters. **Bandwidths normally provided are 1, 2, 10, 20, 50, 100 and 200 cps. External 100 kc filters may also be used with CF-1.**

Crystal filters are employed with extremely rapid attenuation out of band. Individual gain equalizers are provided.

Dimensions: In cabinet: 5½" h x 19" w x 11" d.
Rack panel style: 8¾" h x 19" w.
Rack style is intended for use with LP-1a power supply mounted behind CF-1.

Power Requirements: From LP-1a.



AUXILIARY FUNCTION UNIT C (for LP-1a)

Use of this compact 19" x 3½" unit adds significantly to the utility of the Panoramic Sonic Analyzer, Model LP-1a.

The Auxiliary Function Unit C provides in addition to normal LP-1a specifications

- 10 second scan interval
- Continuously adjustable IF bandwidth, 10 cps-1 kc.
- Step adjustable IF bandwidths of 10, 30, 100, 300 and 1000 cps.
- Continuously adjustable linear sweep width up to maximum of 5 kc.
- Adjustable smoothing (low pass output) filter.
- Voltage calibration reset.

Random signal spectrum analysis is made more convenient when IF filter bandwidth, gain, and smoothing are variable. Generally, the Auxiliary Function Unit is designed for applications involving a high degree of frequency resolution or measurements of noise waveforms. The added controls are valuable when LP-1a is employed with the

Model G-3a

- Automatic plot of amplitude response vs. frequency (linear or decibel).
- Systems all employ a Panoramic Spectrum Analyzer and companion sweep frequency generator.
- Ideal for acoustic devices, filters (particularly band stop), transmission lines, shaker table excitation, amplifiers, hearing aids, etc., and where measurements through large dynamic ranges must be made.
- Controls on analyzer select frequency excursions.

Triangular Wave Generator, Model TW-1, overcomes problems of time delays and ringing of sharply attenuating networks. Signal Alternator, SW-1, completes the broad scope of the system by making possible comparison of characteristic being analyzed vs. a standard unit or implementing insertion of frequency marker pips from a signal generator.

Advantages of the Panoramic Systems are:

- Response to fundamental frequency only.
- Discrimination against noise and hum.
- Virtually unlimited dynamic range.
- Single line presentation.

†The Model TW-1 is used only with Models LP-1a, SB-7bz, and SB-15.

See the Panoramic Analyzer Vol. 1, No. 2 for additional information.

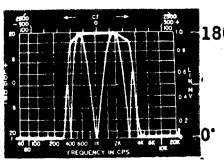
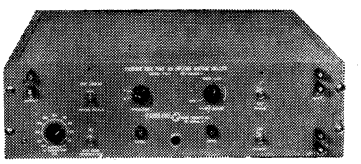
Panoramic SONIC PHASE and AMPLITUDE RESPONSE ANALYZER

Model PA-1



Bandpass filter analysis with PA-1 and LP-1a. Both amplitude and phase responses are automatically plotted on same frequency axis.



The Model PA-1, in conjunction with the Model LP-1a, Panoramic Sonic Analyzer, performs automatic curve tracing of attenuation and phase shift vs. frequency. Both curves appear on the same frequency axis facilitating simple correlation between the two characteristics. The Model PA-1 frequency range of 20-22,500 cps makes it ideal for laboratory and production line tests of audio frequency filters, amplifiers, lines, transducers, etc.

The amplitude tracing operation of the Model PA-1 is similar to that with the Model G-2 herein described.

With a single front panel switch, the Model PA-1 becomes a phase shift response tracer over the segment of the spectrum selected on the Model LP-1a. The linear vertical scale of the Model LP-1a then normally corresponds to a 0-180° phase calibration. For greater phase angles, the instrument reads at a baseline for 0, 360°, 720°, etc. and maximum deflection at odd multiples of 180°.

Full scale deflection of 90°, 36°, 18°, 9° or 3.6° are readily selected by front panel attenuators for accurate measurement of smaller angles. A phase reversal switch effectively adds 180° to the phase indication. With this provision, small phase shifts in the region of 180°, 540°, etc. may be magnified as with small angles near 0°.

Lag and lead sense is simply determined by switching in an internally generated lead phase shift and noting the direction of the change in the presentation.

SUMMARY OF SPECIFICATIONS

Frequency Excursion, Amplitude Scales, and Scan Rates: As selected by Model LP-1a and accessories to Model LP-1a.

Output: 5 volts rms into 600 ohms load. Attenuation provided 0-100 db in 10 db steps. Flatness ±1 db.

Vertical Readout Scales:
Amplitude—Linear and two decade log. Virtually unlimited dynamic range.
Phase—0-180 degrees and odd multiples correspond to full scale. Small phase shifts, 90°, 36°, 18°, 9° and 3.6° may be expanded to full scale on Model LP-1a.

Dimensions:
19" w x 5¼" h panel x 19" d cabinet.

Power Requirements:
95-125 volts, 50-60 cps, 125 watts.

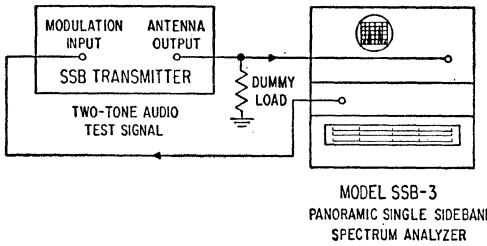
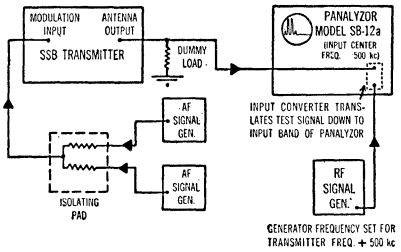
SINGLE SIDEBAND SIGNAL ANALYSIS

dependable CERTIFIED SPECIFICATIONS for accurate data



Block Diagram of Two Tone Test Set-up using Model SSB-3



Block Diagram of Two Tone Test Set-up using Model SB-12a

SSB transmitters and exciters must operate with a high degree of linearity in order to realize full bandwith conservation potentialities. Even relatively small distortions cause spurious signals outside the permissible narrow channel used for SSB. An automatically scanning spectrum analyzer is the most convenient means of pinpointing these effects during set-up, maintenance, and operation of such equipments.

The two-tone test is often used to measure system linearity. See diagrams. Current specifications often require extended range spectrum analysis to —60db. The Panalyzor Model SB-12a (see page 733) and the Model SSB-3 Spectrum Analyzer have been designed to incorporate the needed dynamic measurement range among other important features.

The spectrum analyzer is often utilized in SSB systems for measurement of dynamic transmission bandwidth, residual hum sidebands, vestigial carrier amplitude, out-of-band radiations such as RF harmonics and other spectral properties. Volume 1, No. 3 of the Panoramic Analyzer covers the theoretical and measurement background in some detail.

SB-12a and the complete self-checking package, the Model SSB-3 are unsurpassed instruments for meeting unusually severe rf measurement requirements. The Panoramic instruments may be efficiently operated by non-professional personnel. Infrequently needed controls are out of sight. Most settings are taken care of automatically in the 5 preset analysis modes selected by one switch.

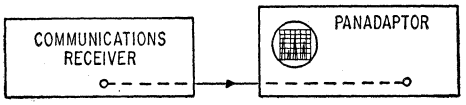
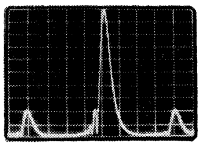
PANADAPTORS

Designed to operate with receivers having an IF equal to the Panadaptor center frequency and show signals on either side of the frequency to which the receiver is tuned, Panadaptor response is preshaped to compensate for receiver front end selectivity to give a uniform overall response. Connection is to the output of the receiver converter stage.





Tone modulated AM spectrum analysis showing carrier and sidebands. Sidebands are 20% of carrier level indicating 40% modulation.

PANADAPTOR equipments are uniquely suited for . . .

- Monitoring communications frequencies at airports and communications centers for possible off-frequency transmissions with minimum chance of message loss.
- Detecting and analyzing interference caused by splatter, improper location of carrier frequencies, spurious modulation, parasitics, etc.
- Instruction in universities and technical schools where their graphic indication of various RF phenomena makes them easy to understand and simple to remember.

Panadaptors are available in 2 models and several types for use with receivers having IF's of 455 kc through 30 mc. Panadaptor responses are optimized for a particular model receiver. Please specify receiver type when ordering. Panadaptors are available to customer specifications for use with receivers with non-standard IF or other unusual properties.

RF—VHF • UHF SPECTRUM ANALYSIS

dependable CERTIFIED SPECIFICATIONS for accurate data

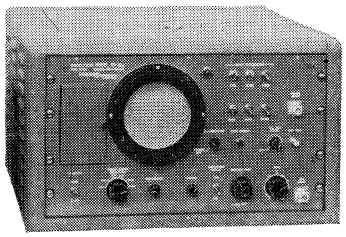
PANALYZORS

PANALYZORS are automatically scanning analyzers which tune through a spectrum of adjustable sweep width about a fixed center frequency. By means of an external signal generator and the broadband input converter in the Panalyzor which translate the spectrum segment to be analyzed down to the input band of the Panalyzor, signals can be observed anywhere in the rf spectrum up to 1,000 mc. Higher frequencies may be analyzed with suitable external mixers.

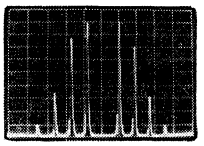
Panoramic Panalyzors can be used to . . .

- Investigate pulsed RF signals
- Analyze AM, FM and SSB transmitters
- Spot spurious oscillations and modulations
- Monitor communications bands, especially for signals very closely adjacent in frequency
- Test industrial RF equipment, diathermy and electrosurgical instruments

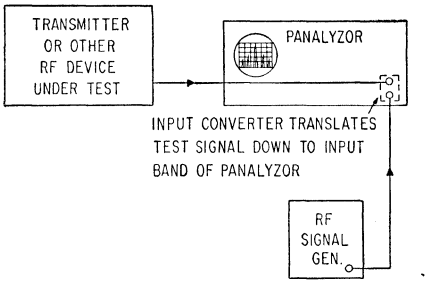
PANALYZORS are offered in 3 models and numerous types. The user may select among the various Panalyzors to attain the requisite maximum sweep width, sensitivity, and resolution capability. It is advisable to specify a Panalyzor with as small a maximum sweep width as practicable because as sweep width capability is reduced in a given series the Panalyzor's resolution capabilities and sweep repeatability on reduced scans are commensurately improved.



Model SB-12a



Panalyzor FM sideband analysis shown at carrier null. Precise deviation checks are readily made. See **Panoramic Analyer,** Vol. 1, No. 4.



Ideal for SSB Analysis—The SB-12a is a critically designed Panalyzor for use especially for RF spectrum analysis with low frequency modulation, intermodulation distortion, hum sideband measurements, etc. SB-12a features which are especially applicable to narrow band analysis of transmitter and exciter spectra as in single sideband systems include . . .

- 60 db linear dynamic range for precise measurement of in-band (odd order) distortion.
- Exceptional selectivity permits analysis of 60 cps hum sideband as far down as 60 db.
- AFC stabilized sweep on narrow scans.
- Internal Frequency Markers and other self checking facilities.
- Tedious setting up of highly resolved analyses is avoided by 5 preset operating modes which automatically select optimized sweep width, sweep rate, IF bandwidth and gain. A push-button speed-up control aids in location of signals in 10 sec. per scan tests.

A permanent, ink-on-paper readout is provided when the RC-3a is employed with the SB-12a. The SB-12a is recommended for general high resolution RF waveform analysis. Applications are found in teletype, oscillator stability studies, complex transmissions, bandwidth measurements, etc. Constructed according to military equipment practice.

Panalyzor Model SB-8b—Important features of these easily operated equipments are sweep width continuously variable from maximum to zero . . . continuously variable resolution . . . continuously variable sweep rate from 1 to 60/sec. with provisions for external and line sweep synch . . . linear, logarithmic and power ampliture scales . . . an adjustable Z axis intensifier for pulse and noise displays . . . 5" CRT.

The SB-8b Type T200 offers 50 cps resolution capability at reduced sweep for precise analysis of adjacent channels and closely spaced sidebands. The **SB-8b Type T10,000,** with 10 mc maximum sweep width is recommended for relatively broad band monitoring. **The Type T1000** characteristics are intermediate between the former two.

As general purpose low cost instruments, the SB-3 Panalyzors have many laboratory and field applications demanding rapid spectrum analysis. The indicator is a medium persistence 3" CRT. Sweep rate is line synchronized to 30 cps. Power source requirements are 115/230 v, 50-60 cps. SB-3 features sweep widths continuously variable from maximum to zero.

Several types are offered and these differ mainly in maximum sweep width and resolution specifications (see table). IF bandwidth is fixed. Approximately a 20% improvement in resolution is achieved at a sweep width of 20% of maximum or less.

Panoramic SPECTRUM ANALYZER

Model SPA-1

50 MC-4000 MC with 2 PLUG-IN TUNING HEADS

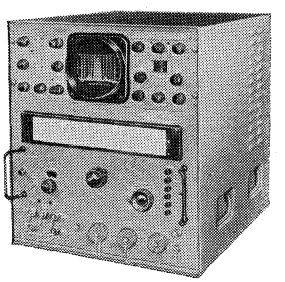
For rf measurements through S Band, the SPA-1 provides for reliable and sensitive spectrum analysis at very low cost. Dispersion is adjustable from 0-10 mc. IF filter bandwidth is variable from 9 kc-100 kc. Differential frequency markers are calibrated from 100 kc-10 mc dispersion.

The SPA-1 consists of Panoramic Indicator Model SC-8b, Type T-10,000 and precise direct reading interchangeable tuning heads which include a wide band crystal mixer. Tuning Head RF-2 covers the range from 50 to 250 mc on fundamentals, while the RF-3 covers 220-4000 mc in five ranges. Both heads have a single frequency control dial with an accuracy of ±1%. Low frequency swept oscillator provides high inherent stability and reliability. Freedom from hum modulation increases utility at low sweep widths. Optional features include preamplifier (Model PRA-1) for sensitivities as high as —100 dbm and a flat face cathode ray tube to photograph screen displays.

Panoramic SPECTRUM ANALYZER

Model SPA-4

10 MC-44,000 MC with ONE Tuning Head



SPA-4's advanced design permits use of one spectrum analyzer where several were needed previously. It combines in a compact package extended range, 10 mc-44 kmc; wide dispersion, 70 mc-0 mc; extreme sensitivity, to —100 dbm; adjustable IF filter width, 1 kc-80 kc; and other features which recommend SPA-4 for versatile and reliable measurements. A frequency marker calibrates dispersion directly.

The single tuning head is calibrated in terms of center frequency of analysis along 8 individually illuminated slide rule calibrations. Mixer level as well as other important voltages are metered.

SPA-4 includes a narrow dispersion mode of operation for studies of signals covering up to a 5 mc spectrum segment from 10-44,000 mc. Improved sweep stability, lower residual FM hum, and better supurious rejection are obtained on the "narrow" scans.

Construction is of highest quality. Non-contacting "shorts" used on klystrons oscillators for low noise.

A 0-100 db variable attenuator is incorporated for all coax inputs. Attenuators are available on request for waveguide inputs.

Panoramic INDICATOR

Model SC-8b

The Model SC-8b is the swept rf receiver portion of the Model SPA-1 Panoramic Spectrum Analyzer. Used with an external signal generator and mixer, it forms the basis of a versatile microwave spectrum analyzer at a very low cost. PANORAMIC TELEMETERING TEST INSTRUMENTS (Cont.)

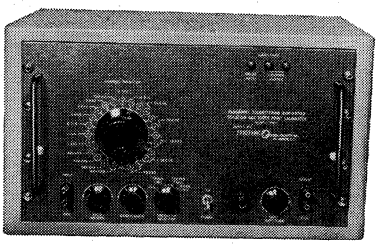
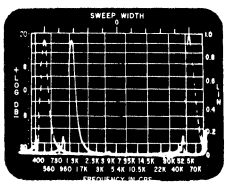
Panoramic TELEMETERING SUBCARRIER DEVIATION and THREE POINT CALIBRATOR Model TMC-1



The TMC-1 is a dual purpose instrument, its two modes of operation being controlled by an operation selector switch on the front panel.

In its first mode of operation, the TMC-1 sequentially furnishes upper limit, center and lower limit frequencies channel by channel for all IRIG channels as outputs for discriminator calibration. Limits are ±7.5% for all channels and ±15% for upper five. **Other limits optional.** Frequency accuracy is 0.02%. Channel switching can be either manual or by option automatic (Optional, add M to description of TMC-1). On automatic, the three calibration points are furnished sequentially with a dwell period of approximately 6 seconds for each frequency, 20 seconds for each channel in rotation. The automatic switching action can be stopped to permit extended observations or measurements within a given channel.

In its second mode of operation, the TMC-1 is used with the TMI-1a, Panoramic Telemetering Indicator, to establish maximum deviation limits and center frequency of subcarrier oscillators. A built-in channel selector in the TMC-1 automatically establishes proper center frequency and sweep width to display the selected channel on the TMI-1a. An internal signal switcher permits alternate display of subcarrier vs. calibrating marker from the TMC-1 for visual comparison of deviation or spread of subcarrier. In one scan of the TMI-1a the upper and lower frequency markers of the selected channel are presented and in the next scan the subcarrier oscillator signal is presented. Similarly, the center frequency marker may be compared with the subcarrier oscillator signal.



Upper and lower limit markers vs. subcarrier indication. When subcarrier frequency is identical to marker frequency corresponding pips are superimposed.

SUMMARY OF SPECIFICATIONS

Marker Accuracy: ±0.02%.

Marker Output Level: 1 v nominal.

Marker Output Wave Shape: Square (approx.).

Output Impedance: Low, cathode follower.

Signal Input: Composite signal for comparison with markers on TMI-1a from 20 mv to 10 v.

Input Impedance: 50,000 ohms.

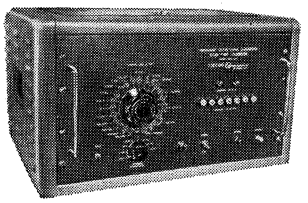
Power Requirements: Self-contained power supply requiring 150 watts at 95-125 volts, 60 cps. External constant voltage transformer supplied. Provision for other power lines available on special order.

Dimensions: Panel and Chassis—10½" h x 19" w x 17 1/16" d. Can be mounted in standard 19-inch electrical-equipment rack.

Slides: Pivot type with 45° and 90° tilt.

Panoramic SEVEN POINT TELEMETERING FREQUENCY CALIBRATOR

Model TMC-307a



The TMC-307a sequentially furnishes seven equally spaced frequencies for all IRIG channels singly, as outputs for discriminator calibration. Limit frequencies are ±7.5% of the center frequency for each channel and ±15% for the upper five channels. Other end limits and spacings can be furnished as required. Frequency accuracy is 0.02%.

Manual and automatic sequencing of frequencies are provided. On automatic, electronic switching permits minimum dwell time per channel of 2.5 seconds with each deviation frequency on for a ¼ second. Complete check-out of 18 channels is thus accomplished in approximately 45 seconds. Longer dwell intervals up to 3 sec per deviation may be selected.

For multipoint calibration of subcarrier oscillators, the TMC-307a can be used together with the TMI-1a, Panoramic Telemetering Indicator, and the CHS-1 Panoramic Telemetering Channel Selector.

Only 10½" high, the TMC-307a is ideal for miniaturized ground station equipment.

SUMMARY OF SPECIFICATIONS

Panoramic TELEMETERING CHANNEL SELECTOR

Model CHS-1

A companion instrument to the TMI-1a, Panoramic Telemetering Indicator, the CHS-1 automatically establishes in the TMI-1a the correct center frequency, sweep width and resolution for any IRIG channel selected for display on the screen of the TMI-1a. An internal signal switcher permits alternate display of subcarriers vs external calibrating markers, available from the TMC-307a, or other source, for visual comparison of linearity or spread of subcarrier. Precise subcarrier oscillator calibration is obtained by simple overlay comparison technique.

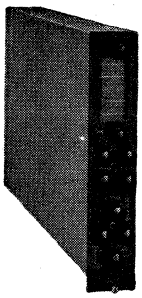
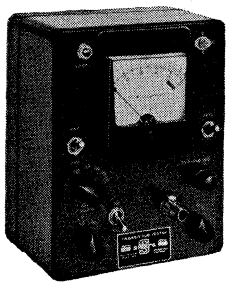
NEW MONITOR OSCILLOSCOPES



Sierra 218
Monitor Oscilloscope

The new Sierra Oscilloscopes, Model 218 Series are especially designed for continuous function monitoring of as many as seven channels simultaneously in one rack unit. Rugged and compact, the Scopes provide, in the smallest possible package, a convenient means for viewing and evaluating complex voltages. Designed primarily for tape recording and data handling systems, the Scopes are particularly ideal for measuring and analyzing mechanical quantities through a transducer, such as stress, strain and vibration, pressure, displacement and acceleration.

NEW IN-CIRCUIT TRANSISTOR TESTER



Sierra 219A
Transistor Tester

The new Sierra Model 219A Transistor Tester provides a technical breakthrough —a means for in-circuit transistor testing, saving hours of trouble shooting and service time. Designed with a unique combination of transistor circuits, using low impedance methods, the Tester will measure the Beta parameter of a transistor while it is connected in a circuit. Beta and Collector Current parameters may be measured with the transistor removed from the circuit. Request Bulletin.

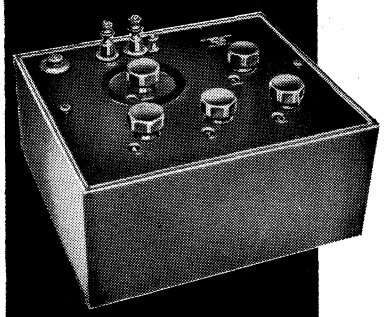
B.I.C. ENDORSED QUALITY

H. W. SULLIVAN LTD.



Model AC440 Direct-Reading, Non-Reactive Decade Resistance. 11,111 ohms. 5 dials, 0.1 ohm increments, 0.01% Accuracy.

2355

World's most accurate Laboratory Standards

Resistance—Inductance—Capacitance

H. W. SULLIVAN LTD., *Makers of the World's finest Electrical Standards and Instruments for Physical Studies, for Electronic Engineering, for Electrical Research, and for Industrial use...present a few of their outstanding achievements.*

NON-REACTIVE DECADE RESISTORS 0.01% ACCURACY, DC to 50 kc.

H. W. Sullivan decades and slidewires are guaranteed accurate to 0.01% from DC to at least 50 kc, **direct reading** without corrections of any kind and without reference to calibration certificates. Units are available from 100 to 100,000 ohms, with 1 to 5 dials. A patented method of reactance compensation permits choice of minimum inductance error, minimum resistance error, or best compromise. The effect of shielding capacity is entirely eliminated. These are the most stable alternating current standards known, and they may be used with equal success on DC. Sullivan DC Resistance Standards are available with accuracies as high as 0.001%. Kelvin and Wheatstone Bridges may be had covering the range of 0.0000001 ohms to 10 megohms, with accuracies of 0.01% to 0.05%.

STANDARDS OF SELF AND MUTUAL INDUCTANCE 0.01% ACCURACY

H. W. Sullivan air cored standards of self and mutual inductance are available in fixed values, in single or multiple decades, and continuously variable. They range in values from 1 μH to 1 H with an accuracy of 0.01%—direct reading. They have a stability of 1 part in 10^5 over long periods and a temperature coefficient less than 5 parts in 10^6 per degree C due to a novel method of geometrical compensation, with high "Q" values and good and known frequency characteristics. **These inductances are integral parts of the SULLIVAN Inductance Bridge which covers the range of 1 μH to 100 H with an overall accuracy of measurement better than 0.1% over most of the range.**

STANDARDS OF CAPACITANCE 0.01% Accuracy

H. W. Sullivan produces a complete range of capacitors and capacitor decades, fixed or variable, air and mica dielectric, from a few $\mu\mu$F up to 5 μF in value. The guaranteed accuracy of most of these is 1 part in 10^4 and their stability is 1 part in 10^5. Temperature coefficients of less than 10 parts in 10^6 per degree C are obtained and are cyclic to 1 part in 10^6. Power factors of 0.00001 (as two terminal capacitances) are maintained up to 10^5 or 10^6 cps. Low residual inductance and high insulation resistance are features of all. **These capacitors are integral parts of the SULLIVAN Capacitance Bridge which covers the range of 0.1 $\mu\mu$F to 100 μF, accurate to 0.01% over part of the range.**

Sullivan Standards of Inductance, Capacitance and Resistance are known throughout the world for unequalled accuracy and stability. We invite inquiries regarding your specific requirements.

WORKING TOGETHER TO GIVE YOU COMPLETE PRODUCT INFORMATION

... and a self-indexing filing system

Here's How It Works . . .

It all starts with the annual *eem*-Electronic Engineers Master. *eem* categorizes the electronic industry into 51 major product groups. Numerically they run from Section 1100 through 6000 and appear at the top of each *eem* catalog page. These same section numbers are used as the index for your personal filing system.

Monthly, you'll receive *CLIP/FILE*, the new product newspaper. Each *CLIP/FILE* new product item includes an *eem* file system number. You simply clip each release along the perforated line, and file it in its appropriate folder.

Each time you refer to *eem* and wish to check for additional information, merely look for the section number at the top of the *eem* page and select the corresponding file folder. There, at your fingertips, is the necessary data to bring you up-to-the-minute.

PANEL-MOUNTING precision electronic instruments by trio®

The Trio Labs' line of miniature panel-mounting instruments presents a unique, performance-proven approach to measuring or monitoring problems in equipment design. This approach — integrating measuring devices into operational and test equipment — gives new scope to the design engineer's ingenuity.
Simple, efficient, foolproof means for repetitive checks and rapid, sequential or continuous metering of critical circuits can be now provided to improve the reliability and performance of system equipment.

. . . designed for panel-mounting, the Trio Labs' philosophy of engineering. Precision electronic instruments are developed specifically for panel-mounting and are not merely modifications of general laboratory instruments.
Miniaturization techniques and novel packaging result in VTVM's that are ideal for integration into actual operating and test equipment.
. . . designed separately for military and commercial applications. Parallel lines of instruments are each carefully designed to the job. One line is not a rehash of the other, rather the ruggedized instruments are engineered to meet stringent military requirements while the commercial line affords the economy and reliability demanded by industrial equipment.
. . . designed for easy adaptation. All Trio Labs' instruments are capable of widely variable characteristics that can be selected to exact needs. The facilities of the organization are available for the solution of any measuring or monitoring problem.
In addition to the models described below, Trio Labs' offers phase sensitive VTVMs, phase meters, multi-channel VTVMs, etc. ***Write for complete free catalog EEM 59.***

DESCRIPTION

The Voltage Ratio Meter is used to measure the ratio of any two quantities that are presented in the form of two D.C., or two A.C., voltages. One quantity may be presented as a D.C. voltage and the other as an A.C. voltage. If two A.C. voltages are presented, they need not be of the same frequency or phase.

Typical applications: Meter is used for testing motor-driven switches to measure the ratio of time of contact to time of no contact . . . to measure the ratio of the input and output voltages of an amplifier to determine gain . . . to measure the input and output voltages of a transformer to determine transformation ratio. It is also used in a hydraulic system to measure pounds per square inch as a function of temperature, or to measure the ratio of any two quantities that can be reduced to electrical terms.

SPECIFICATIONS

Since each application is unique, standardized specifications for the Voltage Ratio Meter can not be given. Specifications are to be determined by negotiation with the customer. Customer should state the quantities to be measured, the type of transducer used, and the accuracy with which the ratio is desired.

Sizes available: 2½", 3½", 4½", 4 x 6", Large AN, Small AN. The 2½", 3½", and 4½" round meters meet the vibration, shock, and humidity requirements of MIL-M-10304A.

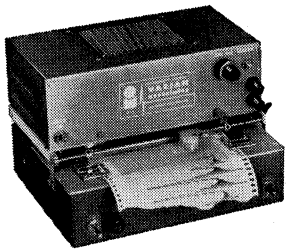
VARIAN STRIP CHART RECORDERS

(POTENTIOMETER TYPE)

Compact, moderate cost recorders using the time-proven potentiometer principle – the same as is used in expensive chart recorders to achieve superior stability, sensitivity, ruggedness and high input impedance. Chart is rectilinear. Pen driving power is ample, even for inkless recording, since it is independent of the source being measured.

VARIAN G-10



Portable for laboratory or bench use where chart's horizontal position and accessibility are of prime importance.

***INPUT & SOURCE RESISTANCE (Both G-10 & G-11A)**

With null balance operation, the separately-powered servo system adjusts the measuring voltage until it "bucks out" the measured voltage. Thus the input resistance approaches infinity at balance, is several hundred thousand ohms off balance. The result is that source resistances as high as 50K ohms are permissible with spans in the range of 10-20 mv. Permissible values increase to 75K ohms for 20-50 mv spans and to 100K ohms with spans of 50-100 mv.

Plaskon®

ALKYD Molding Compounds...

Proven Materials For Critical Plastic Parts

As electronics technology advances, the demand for materials reliability becomes more stringent. Smaller and more compact components must execute critical functions in difficult, changing environments.

PLASKON Alkyd Molding Compounds meet such demands. They provide high arc and insulation resistance and dielectric values required by designers and engineers. More important, they maintain these values at elevated temperatures and after exposure to heat and humidity.

Parts molded from PLASKON Alkyd have unusually high dimensional stability (i.e., minimum after-shrinkage). This, and the fact that they are adaptable to rapid production cycles permits endless reproduction of precision parts . . . parts that hold their tolerances. The manufacture of PLASKON Alkyd Molding Compounds is closely watched to insure constant uniformity and quality.

PLASKON Alkyds can be divided into three groups, corresponding to physical form before molding:

Alkyd **Granular** materials are designed for high speed fully automatic or semi-automatic molding operations. Contacts may be molded-in or inserted in a separate operation. Uses for this Alkyd form include tube bases and sockets, connectors, tuning devices, transformer boards, potentiometers, motor controllers and switch and relay parts.

Alkyd **Putty** is recommended for encapsulation of resistors, capacitors, coils, transformers—small electronic devices where delicate inserts are to be molded within a protective shell. Alkyd putties are molded at extremely low pressures. For many applications, the coefficient of linear thermal expansion will be found similar to popular wire types . . . thermal conductivity of Alkyd putties dissipates heat faster . . . producing less change in dielectric performance before and after encapsulation.

Reinforced Alkyd materials contain glass fiber for increased mechanical strength. Characterized by superior electrical properties, this Alkyd form finds use in the molding of computer parts, synchros, coil forms, terminal blocks, power connectors, stand-off insulators, heavy duty circuit breakers and switch gear.

The chart shows typical properties of PLASKON Alkyd Molding Compounds. Our technical staff is ready to discuss your specific applications and design requirements. ATTENUATION CALIBRATOR MODEL No. 0435

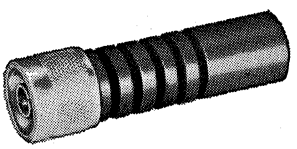
This unit is intended for use with a modulated R.F. power source for purposes of measuring attenuation and insertion loss. When used in conjunction with the ARRA π LINE CONTINUOUSLY VARIABLE ATTENUATOR, measurements can be made in the microwave frequency range with an accuracy of better than $\pm$0.1 over at least a 60 db dynamic range when used in conjunction with a standard detecting element such as a crystal or bolometer.

The ATTENUATION CALIBRATOR is a precision calibrated audio attenuator and has a built-in 1000CPS amplifier for VSWR measurements together with a DC bias supply for use with crystals or bolometers. Operation is from 110V AC 60CPS.

When used without any external attenuator, this unit can calibrate over a range of 51 db if the detecting element is square law or over a range of 102 db if a linear detector is used. Additional features are a mirrored scale, VSWR scale from 1 to 3.2 and 3.0 to 10, a 0-10 db scale, an expanded 0-2 db scale for interpolation to better than $\pm$.05 db, continuous monitoring of bias current and an output for external recording.

MINIATURE MICROWAVE MEDIUM POWER COAXIAL TERMINATION

This unit is designed to cover the frequency range from 2 to 11 KMC with a VSWR of less than 1.05. Using proprietary techniques developed by ARRA, a new microwave medium power coaxial termination just 2 ¾" long is now available to replace the long, bulky and fragile terminations now in use. Standard connectors are Type "N".



Model No.	Freq. Range KMC	VSWR	Average Power Capacity-watts	Element	Price
8512	2.0-11.0	1.05	10	Fixed	$50.

FIXED PAD MICROWAVE ATTENUATOR

These attenuators are designed to cover the frequency range from 1.0 to 11.0 KMC in a single unit and are available in denominations of 3, 6, 10 and 20 db. Standard connectors are Type "N". Size: 8 ½" long.

Model No.	Atten. db	VSWR Max.	Average Power Capacity-watts	Atten. Variation	Price

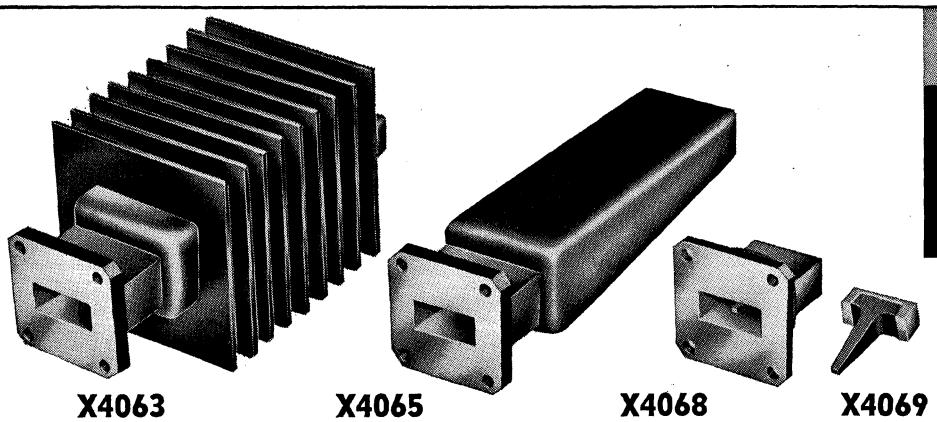
MICROWAVE DUMMY LOAD FAMILY



X4063 X4065 X4068 X4069

Design engineers have often found it necessary to conduct an extensive catalog search in order to select the proper termination for a particular packaging or cost objective. As the result of a comprehensive research and development program, Bogart Manufacturing Corporation now makes available to industry and the Armed Forces, **a family of standard waveguide dummy loads to cover the frequency range from 200 megacycles to 40,000 Mc/s with power capabilities from milliwatts to 10 megawatts.**

The Bogart Model 4063 series of VHP Dummy Loads evolved from a need by the Armed Forces for very high power dummy loads for both field and laboratory use. Originally developed for the Army Ordnance Fire Control Instrument Group, the 4063 series of finned, dry dummy loads covers the frequency ranges from 1120 Mc/s to 40,000 Mc/s with average power capabilities from 75 watts to 6000 watts. **The 4063 series is at this time the only family of high power dummy loads that has been approved by all Armed Forces agencies.** These units, constructed of VHP lossy material have been tested and qualified in accordance with specification MIL-D-14454, MIL-D-3954A and MIL-T-945A. Designed to operate with the highest power radar systems, these dummy loads are lightweight, compact, resistant to moisture absorption and intended to last at least the life of the equipment with which they will be used. **A 5 year replacement guarantee is offered with each 4063 series dummy load.**

The Bogart Model 4065 Series of Medium Power Dummy Loads is identical in construction with the Government approved 4063 series, except that the loads are offered without cooling fins and have been correspondingly derated. These terminations are competitively priced with dummy loads made of graphite, poly-iron and other absorbent materials which do not meet military specifications but are sometimes used for industrial applications. The 4065 series is constructed with the same military standard VHP Lossy Material that is used in all of the Bogart Manufacturing Corporation series of Dummy Loads.

The Model 4068 "Mini-Load" and 4069 Insert Series of Dummy Loads consists of a series of small, lightweight lossy terminations. For many years resistive wedges, composition strips, and resistance cards have been used to absorb power in the range from milliwatts up to medium powers. These devices have been extremely fragile, severely limited in heat absorption, subject to moisture absorption, and have exhibited inability to meet standard military shock and vibration specifications.

Now, Bogart Manufacturing Corporation has perfected a technique of molding small sections of the **VHP** material that is used in their **4063** series of government approved high power dummy loads. These **Mini-Loads** are available in two series; one as an encased dummy load and the other as a lossy wedge which may be simply inserted into a section of waveguide by the user to meet his particular requirements. In this latter fashion, the **Mini-Load** is easily affixed in the same manner as a resistive element; i.e.—cemented into place. By utilizing the VHP material for these **Mini-Loads,** Bogart Manufacturing Corporation now offers to industry a small termination that is extremely rugged, unbreakable for all practical purposes, and able to take higher powers than any other material of its size. These **Mini-Loads** will meet all shock, vibration and humidity requirements of MIL-T-945A, MIL-E-5400A and MIL-E-5272A.

Special applications of Bogart Dummy Loads can be designed to meet your specific requirements. Our applications engineers will be pleased to discuss your particular problems with you.

For all **Coaxial Dummy Load requirements,** refer to Bogart catalogue pages 4064 and 4074.

Write for the Bogart 4063, 4065, 4068, 4069, and 4073 series of dummy load catalogue pages and associated outline drawings.

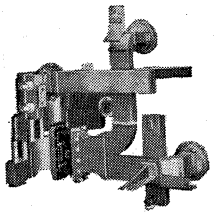
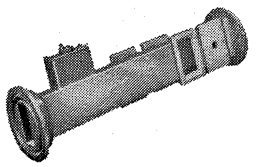
A light weight X-band mixer duplexer of brazed aluminum. Includes balanced mixer, AFC circuit, provision for beaconry and beacon AFC. Note shutter to protect crystals while set is inoperative.



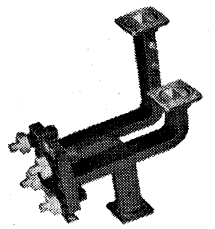
C-BAND BRASS HYBRID DUPLEXER

From prototype to production run in less than 60 days, this C-band Mixer - Duplexer has received loss of less than 0.6 db.



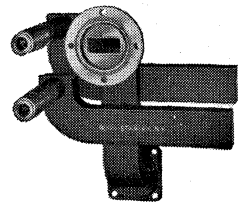
S-BAND DUPLEXER

This broad band unit combines a duplexer with AFC takeoff and a high power phase shifter.



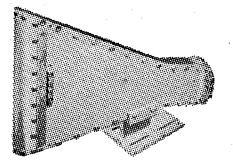
X-BAND BALANCED MIXER

A complete mixer circuit incorporating balanced signal & AFC mixer. Crystal balance in each mixer and between both mixers is rigidly controlled.



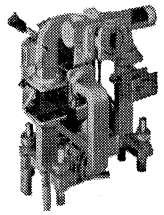
X-BAND REFLECTOMETER

This is essentially an accurately calibrated bidirectional coupler permanently installed in a lightweight radar for field testing.



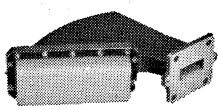
C-BAND ALUMINUM HORN

An example of close-tolerance fabrication in which pressurization must be maintained over a broad surface without benefit of reinforcing structures with no sacrifice of electrical performance.



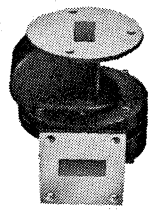
RF HEAD FOR RANGE CALIBRATOR

An X-band package containing all RF elements of range calibrator. Features include crystal shutter, waveguide switch, modulator and demodulator circuits and oscillators for simulation of beacon and radar signals.



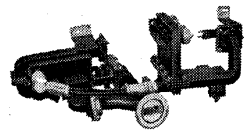
X-BAND ALUMINUM HORN

This X-band antenna feed is well matched over a broad band. The plastic cap and sound casting insure full pressurization over an extreme temperature range.



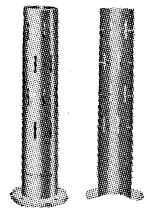
X-BAND CAST ALUMINUM ROTARY JOINTS

These broadband low torque pressurized joints are characterized by consistency of performance over a wide range of ambients.



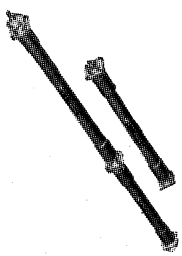
X-BAND SHORT SLOT HYBRID MIXER DUPLEXER

A wide band high power RF system incorporating short slot hybrid technique for both duplexer and mixer. Features include low noise Radar mixer and AFC mixer, directional coupler, AFC take off, L.O. mount with variable attenuator and low loss duplexer.



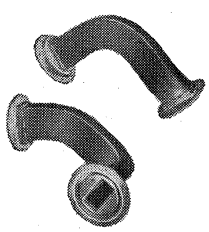
X-BAND BEACON ANTENNA

An omnidirectional, circularly polarized antenna for beacon operation. Cast construction insures proper location of probe-excited radiating slots.



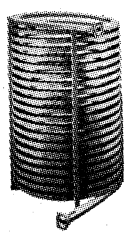
COAX ATTENUATOR

These metallized glass attenuators are precisely controlled for absolute attenuation values combined with minimal frequency sensitivity over 1000 to 4000 mcs.



S-BAND WAVE GUIDE BENDS

These are fabricated aluminum pressurized transmission line elements. Precision bending and brazing combine to give low VSWR and high power handling capacity.



X-BAND DELAY LINE

The bending and assembly of this type of delay line involves many skills.
